[972] VI. Jung: "Psychoanalyse und Assoziationsexperiment,"[15] pp. 258–81. — This paper still shows the strong influence of the original Breuer-Freud theory of neurosis, namely, the theory of the psychic trauma. Neurotic symptoms are essentially symbols of repressed complexes. Disturbed reactions in the association experiment reveal the words and things that lead directly to the unknown complex. Thus far the experiment can be a valuable aid in analysis. This possibility is discussed by means of a practical example, a case of obsessional neurosis. The building up of disturbed reactions into a legend proves the existence of an extensive erotic complex containing a number of individual determinants. In this way we gain a deep insight into the actual personality. Subsequent psychoanalysis justified the expectations the association experiment had aroused, thus bearing out the conclusion that the experiment renders the complex hidden behind the neurotic symptoms accessible to investigation. Every neurosis harbours a complex

that exerts considerable influence on the experiment and, as countless experiences show, it must have a causal significance.

*

Contributions VII to XI have now been published in Vol. II of *Diagnostische Assoziationsstudien:*

[973] VII. Riklin: "Kasuistische Beiträge zur Kenntnis hysterischer Assoziationsphänomene," pp. 1–30. — The author examines the association phenomena in eight hysterics and comes to the following conclusions: The hysterical type of reaction is dominated by more or less autonomous complexes of great affective power, the development of which seems to be much more pronounced than with normal subjects. One or the other complex dominates the reaction to the exclusion of everything else, so that the experiment is thickly studded with complex-disturbances. Domination by one complex is the hallmark of hysterical psychology; it is probable that all the symptoms can be derived directly from the complex.

[974] VIII. Jung: "Assoziation, Traum und hysterisches Symptom,"[16] pp. 31–66. — This paper undertakes to describe and to determine the various ways in which the erotic complex manifests itself in a case of hysteria. First, analysis of the associations shows how they are constellated by the erotic complex, then follows an analysis of its transformations in a dream-series, and finally the complex is shown to be the root of the neurosis as well. In hysteria the complex possesses an abnormal degree of autonomy and tends to lead an active existence on its own, which progressively diminishes and replaces the power of the ego-complex. In this way a new, pathological personality comes into being, whose inclinations, judgments, and decisions tend only in the direction of the pathological will. The second personality consumes the normal ego-remnant and forces it into the role of a secondary (controlled) complex.

[975] IX. Jung: "Über die Reproduktionsstörungen beim Assoziationsexperiment,"[17] pp. 67–76. — The subject of this paper is the reproduction method discussed above (Jung, "Experimentelle Beobachtungen über das Erinnerungsvermögen"). On the basis of

extensive pathological material it is shown that a faultily reproduced association has a reaction-time that exceeds the mean for the experiment, and exhibits an average of more than twice as many complex-indicators as a correctly reproduced association. From this it is evident that disturbance of reproduction is another indicator for the interference of a complex.

[976] X. Emma Fürst (Schaffhausen): “Statistische Untersuchungen über Wortassoziationen und über familiäre Überstimmung im Reaktiontypus bei Ungebildeten,” pp. 77–112. — Association experiments were made with 24 families totalling 100 subjects; this interim paper presents the results of the evaluation of only 9 of the uneducated families consisting of 37 subjects. Evaluation of the remaining material is not yet complete.

[977] It was found that husbands tend to produce rather more outer associations than their wives, and sons rather more than their sisters. 54% of the subjects, predominantly women, were pronounced predicate-types. The tendency to form value-judgments is greater in age than in youth; with women it begins at 40 and with men at 60. Relatives have a tendency to conform in reaction type to concordance of associations. The most striking and most regular conformity occurs between parents and children of the same sex.

[978] XI. Ludwig Binswanger (Kreuzlingen): “Über das Verhalten des psychogalvanischen Phänomens beim Assoziationsexperiment,” pp. 113–95. [Abstract, by Binswanger, omitted.]

*

The following works of the Zurich Clinic are concerned with the diagnostic use of the association experiment:

[979] Jung: *Die psychologische Diagnose des Tatbestandes*.[18] Halle, 1906. — General description and interpretation of the experiment. Practical application to a case of theft.

[980] _____. “Le nuove vedute della psicologia criminale. Contributo al metodo della ‘Diagnosi della conoscenza del fatto,’”[19] *Rivista di psicologia applicata*, IV (1908), pp. 285–304. — Practical application to an actual case of theft with several suspects.

[981] Philipp Stein (Budapest): “Tatbestandsdiagnostische Versuche bei Untersuchungsgefangenen,” *Zeitschrift für Psychologie und Physiologie der Sinnesorgane*, 1909. — Investigation of factual evidence presented by guilty, suspected, and innocent persons. The material was collected partly from the Psychiatric Clinic and partly from prisoners held in detention in Zurich, and is of particular interest as stemming from the living reality of criminal practice.

[982] Jung: *Der Inhalt der Psychose.*[20] Freuds Schriften zur angewandten Seelenkunde. No. 3. 1908. — This paper, an academic lecture, discusses the great change which the introduction of Freudian psychology has wrought in our psychological conception of the psychoses. First a simple account is given of the switch from the anatomical to the psychological approach; then follows an outline of the psychological structure of dementia praecox, illustrated by a number of concrete cases. The paper does not purport to be anything more than an introduction to the modern problems of psychological psychiatry. It was published in Russian and Polish in 1909.

[983] Ladame Geneva: “L’association des idées et son utilisation comme méthode d’examen dans les maladies mentales.” *L’Encéphale, journal mensuel de neurologie et de psychiatrie*. No. 8, 1908). — Extremely objective account of the results of association studies.

[984] _____. Review of Jung’s *Psychologie der Dementia praecox. Archives de psychologie*. IX 1909), 76. — The author summarizes the content of the book in some detail, but refrains from criticism and only adds the following passage at the end: “In conclusion, let us remark how fruitful attempts of this kind … are. After reading them it is impossible to go to sleep again mentally and to take a calm or desultory view of the innumerable dementia praecox patients who inhabit our asylums. One feels irresistibly compelled to look for something else behind the banal symptoms of psychosis, to discover the individual himself and his normal and abnormal personality.”

[985] Alphonse Maeder Zurich: I. “Contributions à la psychopathologie de la vie quotidienne.” *Archives de psychologie*. VI. — II. “Nouvelles contributions à la psychopathologie,” *Archives de psychologie*. VII. I Simple analyses of Freudian slips of the tongue, forgetting, *faux pas*.

demonstrating the existence of a repressed idea with negative feeling-tone. II The author gives examples of various kinds of forgetting caused by “isolation” and “derivation,” discusses abreaction “décharge émotionnelle” in relation to the concept of the complex, and offers evidence of dissociation in normal persons, including the mechanisms of displacement, “irradiation” and identification. Attention is drawn to “automatismes musicaux” and to the indirect means of expression employed by the unconscious. The author stresses the fruitfulness of this branch of psychopathology.

[986] _____. “Essai d’interprétation de quelques rêves,” *Archives de psychologie*, VI. —A short introductory account of Freud’s theory of dream interpretation and of psychoanalysis, illustrated by four of the author’s dream analyses. He shows that the same symbols are frequently employed in dreams, legends, and myths in exactly the same way (notably the snake, dog, bird, garden, house, box).

[987] _____. “Die Symbolik in den Legenden, Märchen, Gebräuchen und Träumen,” *Psychiatrisch-neurologische Wochenschrift*, X. — Thinking in symbols is an inferior stage of association that equates similarity with identity; it is frequently a process of unconscious activity (hence its role in dreams, hallucinations, delusional ideas, as well as in poetry). Examples are taken from epileptic twilight states. Author discusses the assimilative tendency of the sexual complex in relation to symbol formation. Interpretation of the fish as a sexual symbol provides the clue to numerous customs, folk beliefs (fish on Friday, April fish = April fool, the game on Ash Wednesday), legends and fairytales (Grimm: “The Golden Fish”).

[988] _____. *Une voie nouvelle en psychologie*. Coenobium Lugano-Milano, 1909. — Informative essay on Freudian psychology (excluding psychopathology). By uncovering unconscious motivations, psychoanalysis provides a coherent view of the way a person thinks and acts.

[989] Disturbances of unconscious activity are discussed with the help of the author’s own analyses. These disturbances should be regarded as expressions of the unconscious, as revelations of unadmitted tendencies. The gradual transition to the pathological is stressed throughout. Dreams

are intimately connected with the individual’s actual conflicts; they are solutions offered by the unconscious which are often accepted later on and become realities. Conflicts are due partly to the stresses of civilization.

[990] Section III treats of symbols in dreams, hallucinations, fairytales, and legends, and in ordinary speech. The symbol is a special form of thought association characterized by its impreciseness: vague analogies are taken as identities. This is probably typical of the unconscious: it has something infantile and primitive about it. Symbolisms in popular speech (Rabelais, folklore), in legends, in the language of primitives show affinities with associations under fatigue, in *abaissement du niveau mental*, in symptomatic actions when attention is distracted, in dreams, psychoses, and neuroses.

[991] _____. “A propos des Symboles,” *Journal de Psychologie normale et pathologique*, 1909. [Abstract, by Maeder, omitted.]

[992] Hermann Müller (Zurich): “Beiträge zur Kenntnis der Hyperemesis Gravidarum,” *Psychiatrische-neurologische Wochenschrift*, X. — On the basis of careful clinical observations on a number of cases of hyperemesis[21] the author comes to the following conclusions:

1. *Vomitus matutinus gravidarum* is a psychogenic symptom.
2. Hyperemesis is in the majority of cases psychogenic.

[993] Although the author does not put forward any complete analysis, in several of his cases he makes psychological insight possible. Attention is paid throughout to the views of the Freudian school.

[994] _____. “Ein Fall von induziertem Irresein nebst anschliessenden Erörterungem,” *Psychiatrisch-neurologische Wochenschrift, XI*. — A case of religious exaltation in a female religious fanatic induced a psychosis in a female hysteric who lived with her, by reason of the “same aetiological demand.” The presentation of the two cases is elegant and lucid, thanks to the application of Freudian analysis.

[995] Oskar Pfister (Zurich): “Wahnvorstellung und Schülerselbstmord. Auf Grund einer Traumanalyse beleuchtet,” *Schweizerische Blätter für Schulgesundheitspflege*, I (1909). — “Psychoanalytische Seelsorge und experimentelle Moralpädogogik,” *Protestantische Monatshefte*, I (1909).

— “Ein Fall von psychoanalytischer Seelsorge und Seelenheilung,” *Evangelische Freiheit. Monatsschrift für die kirchliche Praxis in der gegenwärtigen Kultur*, II–V (1909). [Abstract, by Pfister, covering all three items, omitted.]

[996] Pototsky (Berlin): “Die Verwertbarkeit des Assoziationsversuches für die Beurteilung der traumatischen Neurosen,” *Monatsschrift für Psychiatrie und Neurologie*, XXV, pp. 521ff. — The author applied the association experiment to two patients with neuroses due to an accident. In the first case there was an overwhelming predominance of the compensation complex, in the second a striking absence of the same complex. Prognostic conclusions are drawn from these findings.

[997] Frank Riklin (Zurich): “Hebung epileptischer Amnesien durch Hypnose,” *Journ. f. Psychol, u. Neurol.*, 1:5/6 (1903). — The author’s success in clearing up the amnesias of epileptics under hypnosis demonstrates their affinity with hysterical amnesias. Association experiments of clinical, diagnostic interest are also reported.

[998] _____. “Zur Anwendung der Hypnose bei epileptischen Amnesien,” *Journ. f. Psychol, u. Neurol.*, II (1903). — Report of another case with epileptic twilight states and disappearance of amnesia, though it is to be regretted that no analysis is given of their content. During these states the patient lovingly stroked a cat, and sometimes a goat too. It has since been brought to my knowledge that this scene was a fragment of an infantile erotic experience.

[999] _____. “Zur Psychologie hysterischer Dämmerzustände und des Ganserschen Symptoms,” *Psychiatrisch-neurologische Wochenschrift*, No. 22 (1904). — Ganser has described the symptom of “irrelevant talk” in hysterical twilight states. Subsequently, the concept of Ganser’s symptom has been taken by various authors (Raecke in particular) now in a broader and now in a narrower sense. Further, it was maintained hat the symptom is exclusively associated with the outbreak of twilight states among prisoners in detention. The psychological affinity between the irrelevant talk of hysterics and the mechanism of simulation forced itself upon these authors largely because of this fact. Jung (“Ein Fall von hysterischem Stupor bei einer Untersuchungsgefangenen,” *Journ. f. Psychol, u. Neurol.*, 1, 1902) was the first to place the problem on the

footing of Freudian psychology, thus facilitating the correct evaluation and interpretation of Ganser's symptom and the twilight state.[21a]

[1000] The paper reports four cases of hysterical twilight states with Ganser's symptom. Only one of them was a prisoner in detention, the others not. The psychic situation of the detainee is exceptional: he is driven into a corner, gives false answers, tells lies, and in an extremity of distress falls into a twilight state; and only under these conditions will the symptom of "automatized simulation," of not knowing and not understanding, come markedly to the fore. The general situation at the onset of Ganser's twilight state is that a painful event is immediately repressed and thrust into oblivion because it is incompatible with the other contents of consciousness. The motive of not knowing or of not wanting to know produces the symptom of irrelevant talk. Disturbance of orientation proves to be a wish not to be oriented in regard to the existing situation. In twilight states, not knowing can also be replaced by compensatory wish-fantasies. The pronounced "restriction of consciousness" serves to split off the intolerably painful idea and to allow the emergence of censored, wish-fulfilling situations.

[1001] _____. "Analytische Untersuchungen der Symptome und Assoziationen eines Falles von Hysterie," *Psychiatrisch-neurologische Wochenschrift*, No. 46 (1905). — For the main part the analysis stems from the year 1902–3 and concerns a typical, severe case of conversion hysteria. At that time the Breuer-Freud *Studien über Hysterie* still served as a theoretical and technical model. The therapeutic results must be rated very good; during the 6–7 years since then, the patient's physical symptoms have come back only occasionally. Her personality, however, shows signs of moral deterioration. Nowadays, perhaps, we would no longer have the courage or the desire to analyse a personality of so little value and so poorly developed, and with so few hopes for the future. The results are therefore to be rated all the more highly. An important contributory factor was the transference to the analyst. While the author found that abreaction was not sufficient to account for the therapeutic result, he was handicapped by insufficient knowledge of the nature of the transference.

[1002] At the time of the analysis the author was also not familiar enough with dream interpretation to derive much benefit from it.

[1003] The structure of the symptoms was analysed and a number of psychic traumata were discovered. The patient's early childhood received scant attention; on the other hand the mechanism by which hysterical ailments of the body are produced is amply documented.

[1004] One section of the book is devoted to association experiments. At that time it was of great importance to show that the same mechanisms are at work in the association experiment as those which produce hysterical phenomena, and that the laws governing the effects of the complex are the same in the experiment as in normal persons, but only emerge with greater clarity.

[1005] Another section is concerned with the association mechanism leading to conversion hysteria and with the theory of abreaction. The author was keenly aware of the gap between theory and fact, which has since been filled by introducing the concepts of transference, libido, and infantile sexuality.

[1006] _____. *Die diagnostische Bedeutung von Assoziationsversuchen bei Hysterischen*. — Lecture delivered at the 35th meeting of the Society for Swiss Psychiatrists in St. Urban, 1904. Abstract in the annual report of the Society and in the *Psychiatrisch-neurologische Wochenschrift*, No. 29 (1904).

[1007] _____. "Über Versetzungsbesserungen," *Psychiatrisch-neurologische Wochenschrift*, Nos. 16/18 (1905). — The opening of the annexes to the Rheinau Sanatorium (Canton Zurich) affords an opportunity to observe the effect of transferring mentally ill patients from one institution to another. The observations relate to 85 patients of whom the author has previous knowledge at the Burghölzli. In more than half the cases an improvement was noted.

[1008] Adaptation to reality is helped by greater freedom of movement and, above all, by work therapy. Especially in the commonest disease, dementia praecox, this draws the patient out of his introversion and transfers his interest to reality. In order to show how the patients assimilate their new milieu, the author briefly discusses the psychological significance of the most important symptoms of this disease (negativism, blocking, wish-fulfilment in delusional ideas, servant-girl psychoses, fertility symbols, mistaken identity due to complexes, religious delusions as translation of wish fantasies into paranoid ideas; their elaboration, condensation, stereotypization, cathexis of the motor apparatus by complex-automatisms).

[1009] The best results are obtained through the exercise of complexes of ideas and functions that have remained normal. Equally effective are early discharge, replacement whenever possible of bed treatment, which only accentuates introversion and “dreaminess,” by work therapy which draws the patients out of themselves.

[1010] With the aid of two case histories it is shown how the introversion comes about, where the transference of interest to the outside world fails, and how the process of introversion goes much further than simple wish-fulfilment in fantasy would require. In the second case even the attempt at wish-fulfilment in reality was unable to check the introversion; the unconscious produced ideas of self-destruction to which the patient succumbed by committing suicide.

[1011] In about half the cases the transfer had no noticeable influence.

[1012] The effects of the transfer are illustrated by a series of excerpts from case histories analytically interpreted.

[1013] _____. “Beitrag zur Psychologie der kataleptischen Zustände bei Katatonie,” *Psychiatrisch-neurologische Wochenschrift*, Nos. 32/33 (1906). — The author succeeded in making contact with a catatonic while in a severe cataleptic state and in discovering something of what was going on in this state. We learn from the anamnesis that this condition set in after a psychosis lasting for four years. The psychosis first manifested itself in the patient’s autoerotic self-aggrandizement from the age of 18. He tried to win the hand of a relative’s rich daughter, completely ignoring the impossibility of doing so. Despite being rebuffed he continued to press his suit undeterred. Cataleptic symptoms were already present on his admission to the clinic, along with a persistent tendency to break out and get to his cousin.

[1014] The patient’s condition can be outlined as follows: underlying the catalepsy is a powerful tendency to sleep, to “be a dead man,” as was evident from the patient’s own statements. The result of this tendency resembles natural sleep, but actually it is more like hypnotic sleep. It is motivated by the repression of a complex, a wish to forget.

[1015] Although the author succeeded in breaking through this sleep tendency, the breakthrough was not complete, so that, side by side with adequate discharge of affect, for instance weeping over the utter hopelessness of ever reaching the beloved, a peculiar compromise between the discharge of affect and the sleep tendency could be observed in the patient's facial expression and demeanour. The two components were sometimes divided into the two halves of the face: one side weeping, one eye open. Keeping the eyes open meant rapport with the investigator; closing the eyes meant breaking off the rapport and the victory of the tendency to sleep or forget.

[1016] Throughout the investigation the thought perseverated, "I am going to marry Emma C.," or "I love Emma C.," counterbalanced by another thought which maintains the sleep tendency as a protective factor and which voices the cousin's reply, "Don't expect anything of the future."

[1017] The patient readily imagined wish-fulfilling situations in which he believed his beloved was standing before him, went towards her, tried to embrace her, took other persons present (doctor, warder) as substitutes (mistaken identity), but always through the veil of cataleptic sleep.

[1018] Through this veil it is possible to perceive quite adequate and profound discharges of affect.

[1019] Evaluation of the questions and modes of reaction follows the laws of complex-reactions in the association experiment.

[1020] This study suggests that the catatonic phenomena in dementia praecox have in general the significance attributed to them in the present case.

[1021] _____. "Über Gefängnispsychosen," *Psychiatrisch-neurologische Wochenschrift*, XI, Nos. 30/37. —An attempt to explain and classify the clinical pictures of prison psychosis along psychoanalytic lines. Prison is a psychological situation which, despite differences of constitution in the diagnostic sense, releases psychological and pathological reactions that are more or less uniform.

[1022] _____. “Psychologie und Sexualsymbolik der Märchen,” *Psychiatrisch-neurologische Wochenschrift,* IX, Nos. 22/24. — Excerpts from the author’s major work: *Wunscherfüllung und Symbolik im Märchen.*

_____. *Wunscherfüllung und Symbolik im Märchen.* (Schriften zur angewandten Seelenkunde, edited by Freud, No. 2, 1908.) [Abstract, by Riklin, omitted.]

[1023] Schnyder (Bern): *Définition et nature de l’hystérie.* (Congrès des médecins aliénistes et neurologistes de France et des pays de langue française, XVIIième Session.) Geneva, 1907. — The doctrinal tenets of a wide-ranging literature are scrutinized in this volume. Among the reviews there is an objective account of the Breuer-Freud method, as well as of the theory of complexes. Schnyder rejects the modern viewpoints. “The ideas of Freud and his partisans are certainly an important contribution to the solution of the problem of hysteria. However, the sage of Vienna might be reproached for having introduced an arbitrary mechanization into the psychological conception of hysteria, and for relying on hypotheses which, however ingenious, are of too subjective a nature to lay claim to incontestable scientific value.”

[1024] Schwarzwald (Lausanne): “Beitrag zur Psychopathologie der hysterischen Dämmerzustände und Automatismen,” *Journ. f. Psychol, u. Neurol.,* XV (1909). — Investigation of a psychogenic twilight state in which the patient set fire to his house. The material allows glimpses into the psychological mechanism of the deed and of the case itself. The infantile history is unfortunately incomplete, but the author is mistaken in dispensing entirely with infantile development. The patient’s childhood is of the greatest importance for the subsequent development of neurosis, at least as great as the situation at the moment, if not greater.

[1025] A refining of his psychoanalytic technique would convince the author of the soundness of this view. The dream of “Tom Thumb” which the patient had the day before the incendiarism is very significant and clearly indicates that the act was determined by infantile reminiscences. This has escaped the attention of the author. Analysis of childhood and the correct evaluation of its results is one of the most difficult parts of the psychoanalytical technique, particularly for the beginner.

Editorial Note

[Jung contributed several abstracts to the periodical *Folia neuro-biologica* (Leipzig).[22] for which he was an editorial consultant. As these are summaries without critical comment, they are not translated but merely listed here:

REVIEW OF HITSCHMANN: “FREUD’S NEUROSENLEHRE”[1]

[1026] Hitschmann’s book meets a longfelt need. A book that introduces the beginner to the problems of psychoanalysis in a clear and simple way has long been wanted. Hitschmann has fulfilled this task most satisfactorily. It cannot have been easy to present the manifold discoveries and conclusions of psychoanalysis in systematic order, for, contrary to the prejudices of our opponents, it is not at all a question of a preconceived system that puts no difficulties in the way of further theoretical development, but of extraordinarily complicated material that throws into relief the whole laboriousness of patient empirical research (only, of course, if one works in this field oneself.) The content of the book is very diverse but in no way confusing. The author has confined himself to essentials and, where the problems are still fluid, has been satisfied with hints. He has thus succeeded in painting an excellent picture of the present state of psychoanalysis and its far-reaching problems. It is to be hoped that the book will reach the widest possible public, not least because it will dispel numerous prejudices and false opinions which have arisen among medical men through inadequate knowledge of the literature. We must also hope that it will soon be translated into foreign languages, for which purpose it is better suited than many original researches which are so specialized that they are difficult to understand.

ANNUAL REPORT (1910/11) BY THE PRESIDENT OF THE INTERNATIONAL PSYCHOANALYTIC ASSOCIATION[1]

[1027] A year and a half ago at the Congress in Nuremberg it was decided to establish an International Association; the foundation of local branches in Vienna, Berlin, and Zurich followed in quick succession. The Berlin branch, with nine members, was set up in March 1910, with Dr. Abraham[2] as chairman; Vienna followed in April with twenty-four members, under the chairmanship of Dr. Adler.[3] Zurich was established in June with nineteen members, under Dr. Binswanger[4] as chairman. These branches formed the base of our International Psychoanalytic Association, though with its fifty-two members in three countries it was still a tender shoot. With great pleasure and satisfaction I now can announce that in the past year our Association has led a most vigorous life. In February the seed planted in America sprouted. A local branch was established in New York with twenty-one members under the chairmanship of Dr. Brill.[5] And at long last South Germany joined in: the Munich branch was established in March with six members under Dr. Seif[6] as chairman.

[1028] During 1911 the respective memberships grew as follows: Berlin, from 9 to 12; Vienna, from 24 to 38; Zurich, from 19 to 29. Thus the total membership rose from 52 to 106. In other words, we have slightly more than doubled.

[1029] The Zurich group is deeply grateful to the stimulus provided by Freud’s scientific theories. It may to some extent lessen our debt of gratitude if we may be allowed to point out that the founders of the branches in Berlin. Munich, and New York have come out of the Zurich school.

[1030] This encouraging proliferation in the outside world is matched by the teeming scientific activity within the sections. I refer to the variety of topics on which lectures were given in the individual groups. Positive contributions to our scientific problems, however, can be expected only when an individual member’s rich experience is brought to bear on the solution of the problem adduced. In general, such an ideal condition is difficult to bring about; specifically, groups with comparatively recent local traditions will consider it their foremost goal to instruct and educate their members. At this time psychoanalysis demands of anybody who wants to master it an uncommon amount of industry and scientific concentration, if it is to be more than the free-wheeling exercise of highly individualized talents. The temptation to eschew empirical evidence is very strong in psychoanalytic work, especially since scientific *pseudo-exactitude*, like all cultural absurdities, collapses before the gaze of the analysand into its own nothingness. Yet, this does not do away with the need for systematic planning of scientific research and exposition, which must be well conceived and immediately convincing. We who are favoured with taking possession of these newly discovered territories are obliged to use self-discipline so as to prevent these goods from being jeopardized by an unbridled imagination. Let us never forget that everything we conceive and create is well conceived and well created only when it is addressed to mankind in a humanly intelligible language. What fate expects of us is that we faithfully husband the enormous store of knowledge provided by Freud’s discoveries and pass it on to our fellow men, rather than pervert it for the gratification of our own ambitions. This task requires from each of us not only a high degree of self-criticism, but also a thorough psychoanalytic training. We know well that this training is hard to come by in isolation; it is easier to obtain it when many different heads work together. This task of teaching and training is one of the main purposes of the branches of our Association, and I should like to recommend it to the local chairmen with special emphasis. Next to the results of new research, discussions of elementary questions should be on the agenda of local meetings; they would enable younger members to acquire knowledge of fundamental ideas and principles with which a thorough familiarity is the *sine qua non* of the scientific method. Such basic discussions would make it possible to dispose of many theoretical and practical misconceptions. And it seems to me of great importance to expose deviations of opinion to immediate and thorough discussion in order to forestall any squandering of our strength on pointless side-issues. This possibility, as the events in

Vienna[7] have shown, lies not so far afield, inasmuch as the present unbridled ways of psychoanalytic investigation and the multitude of problems that are touched upon encourage changes, as revolutionary as they are unjustified, in the principles of neurosis theory that Freud discovered and elaborated in decades of hard work. I believe, vis-à-vis such temptations, that we must never forget that our Association also has the important purpose of discrediting "wild" psychoanalysis and not admitting it to its own ranks. We need not fear that dogmatism—long desired by our opponents—would surely invade psychoanalysis; but it rather means that we are holding tightly to the principles we have gained and to which we will adhere until they have been either entirely confirmed or else recognized as wholly false.

[1031] After these remarks and wishes concerning the cultivation of our science in the local branches, I must also call your attention to the publishing activities in the psychoanalytic field. The past year has seen the *Zentralblatt für Psychoanalyse*[8] added to the *Jahrbuch;* under its alert editorship the new journal has already published a great deal of material and by its variety rendered a good account of the variety of psychoanalysis. Next year a further organ will be added,[9] of a more general rather than strictly medical character.

[1032] This year I have witnessed with my own eyes the tremendous impression that the efforts on behalf of our cause have created in the world. Knowledge and appreciation of psychoanalysis are more widespread than is generally assumed.

[1033] This past year has brought us in Zurich a loss, a loss of special poignancy for the hopes for our scientific future. It is the death of our friend Honegger,[10] who had recommended himself to the membership by his ingenious paper read at Nuremberg.

TWO LETTERS ON PSYCHOANALYSIS[1]

10 January 1912

[1034] In the communication from Dr. Kesselring and Dr. B. of the Keplerbund, which appeared in this column, exception was taken to the following remark of the reporter: “Dr. Kesselring, as he himself observed, spoke as an opponent of Freud’s psychoanalytic method and at the request of the Keplerbund. This Society is opposed to a tendentiously materialistic pursuit of the natural sciences and wishes to combat the erroneous view that scientific knowledge stands in the way of religious belief. Hence the impression which the speaker intended to make upon his audience is perfectly understandable.”

[1035] In saying this the reporter did not “discredit” Dr. Kesselring’s willingness to speak on Freud in the Keplerbund, nor did he discredit the general activity of that Society—he merely stated something that was self-evident. The Keplerbund has the following article in its programme, which it claims is based on a “scientifically and ethically unassailable foundation”: “The Keplerbund holds the conviction that the truth contains within itself the harmony of scientific facts with philosophical knowledge and with religious experience.” Further: “The Keplerbund differs quite consciously from the materialistic dogma of monism and combats the atheistic propaganda resulting therefrom, which wrongly seeks support in the findings of natural science.”

[1036] According to this programme, therefore, the Keplerbund is not merely a champion of enlightenment and popular education, but also a militant organization. Since Freud’s teachings likewise stand in sharpest contrast to the “harmony” sought for by the Keplerbund, every thinking person will know that the society must, on its own admission, fight against them. When an organization arranges a lecture, it usually makes sure beforehand of the point of view of the lecturer, no matter whether its interest in the theme is religious, political, artistic, or scientific. Anyone who knows that Dr. Kesselring was a pupil of Freud’s must also know—

so at least one must assume—that he is Freud's opponent in theory and in practice. Equally, a reporter engaged by the Keplerbund knows that he cannot defend Freud's "pan-sexualism" within its precincts. The reporter, who incidentally is neither a Freudian nor against the Keplerbund, did not credulously rely on the opinions of others, but to the best of his ability oriented himself beforehand on the theme of the lecture, the principles of the Keplerbund, and the views of Dr. Kesselring.

[1037] In this same connection a correspondent wrote: "To the amazement of professional people Dr. Kesselring's lecture 'On Psychoanalysis' brought before the public at the Schwurgerichtssaal a recent line of medical research which, among other things, has to include within the scope of its analytical work the most intimate and repulsive of all human fantasies. Disputes over the results of this research are taking a violent form in professional circles, and opinions are very much divided. But however violent the scientific discussion may be, opponents and friends of psychoanalysis are alike agreed that such things, even if only for the sake of good taste, should not be paraded before the public at the Schwurgerichtssaal, quite apart from the fact that even the best educated public can exercise no competent judgment in these matters. One could, with as much right, hold gynaecological examinations at the Schwurgerichtssaal in order to arouse public feeling against some of the findings of medical research."

[1038] For the rest, the lecture, whose lack of objectivity must have struck even the layman, contained so many distortions that it seemed designed to spread confusion and error. Those who wish to find out what psychoanalysis is really about are recommended to read Freud's *Über Psychoanalyse*[2] (publ. Deuticke, Vienna and Leipzig), in which he gives an account of his views and methods in more or less popular language. Reference should also be made to the invaluable work *Die Psychoanalyse Freuds*[3] (Deuticke) by Eugen Bleuler, professor of psychiatry at Zurich, who discusses in an objective and critical way the pros and cons of psychoanalysis. The authority and continental reputation of this excellent scholar should guarantee the educated public a more competent view of psychoanalysis than the statements of Dr. Kesselring.

DR. J.

17 January 1912

[1039] In connection with the article on “Psychoanalysis” that was published in your columns last Saturday, I would like to remark that the concept of sexuality used by Freud and me has a far wider range of meaning than it has in common usage. As I have often pointed out, we understand by “sexuality” all those instinctual forces which extend beyond the domain of the instinct of self-preservation. The scientific justification for this conception cannot be discussed here. It can be read about in Freud’s and my writings. Confusion between the common conception and our biological conception of sexuality naturally leads to the greatest misunderstandings.

[1040] I further allow myself to remark that it is not permissible to lay at our door all the immature researches that have been undertaken by less qualified persons. We can accept responsibility only for what we ourselves have written, and not for the manifold sins of other writers. One could just as well hold Christianity responsible for the abominations of the Inquisition, if one wished to adopt so summary a procedure. Naturally, I am not thinking of the invaluable researches of Dr. Riklin, with which I am in full agreement, but of the book by Michelsen,[4] mentioned by my critic F. M.,[5] and a number of other writings whose standpoints and method of exposition I must repudiate.

DR.JUNG

ON THE PSYCHOANALYTIC TREATMENT OF NERVOUS DISORDERS[1]

[1041] Psychoanalysis differs from other psychotherapeutic methods in that, by preference, it takes as its starting point those products of the human psyche which originate outside the selective effect of attention—parapraxes, the seemingly pointless fantasies of daydreaming, nocturnal dreams. The founder of the method, Professor Freud of Vienna, has succeeded in demonstrating from this material the existence of a principle which governs psychic events, the principle of *determination*. These inferior products, accordingly, are not fortuitous, but clearly and demonstrably are causally conditioned, or in psychological terms determined. They are formed under the influence of feeling-toned, unconscious ideas.

[1042] The application of the method to the pathological formations of psychoneurotics has shown that these are built up in a similar way, only they are much more complicated. The first formulation of the newly won insights was the trauma theory, as propounded by Breuer and Freud in their *Studies on Hysteria*, published in 1895.

[1043] Further investigations showed, however, that the trauma is of less pathological significance than the *conflict*, or rather, that most experiences acquire traumatic force only when they release a conflict within the patient. These conflicts are in the overwhelming majority of cases between sexual wishes (in the widest sense) and opposing tendencies of a moral and aesthetic nature. The result of such conflicts, which affect the emotional life, is a series of pathological processes, mechanisms altogether comparable to the defensive measures which the body puts up against a noxious agent.

[1044] To trace these mechanisms is now the task of the therapy, the ultimate aim of which is to free the psyche from the conflict.

[1045] In the case of a 35-year-old female hysteric, married, mother of several children, who since her 20th year had exhibited a number of hysterical physical symptoms, psychoanalysis was carried out after numerous other treatments had failed. Three of her symptoms, which all affected the respiratory activity, could be traced back to a trauma at the age of puberty, an attempted rape, when the full impact of the man's body had compressed the thorax. But the ultimate determinant was to be found in the experiences of earliest childhood, when the patient had listened with sexual excitement to the nightly intercourse of her parents. Thus the symptom which seemed like a sudden involuntary expiration with simultaneous closure of the glottis was a repetition of the following scene: her mother once came to her bed, whereupon she started violently and wanted to let out a scream, which she was just able to suppress. These two opposed innervations persisted in the form of the aforesaid symptom.

[1046] Now when, as a result of unfavourable experiences, the individual does not obtain sufficient sexual gratification in later life, a process occurs which Freud calls regression: as a substitute for the failure of gratification, the patient reverts to an earlier, infantile one.

[1047] This infantile gratification, however, is not re-experienced in its original form, but only in the form of its somatic, physiological concomitant. There is a *conversion* of sexual excitation into somatic-motor excitation.

[1048] So with this patient the respiratory disturbance induced by the two opposed innervations became fixated not because of the fright she had received, but because of the sexual excitement that had accompanied her listening.

[1049] The onset of the disorder was directly connected with her marriage, which had brought the patient disappointments, so that in intercourse she remained frigid. The libido that was nevertheless present consequently chose the way of regression and led to the reactivation of those past and forgotten experiences of gratification, or rather to their physiological concomitants.

[1050] The result of the treatment was that all symptoms disappeared but for a few traces.

[The discussion that followed did not deal specifically with Jung's case. The speakers, including Paul-Charles Dubois, of Bern,[2] recounted cases of their own that had been cured by nonpsychoanalytic means and made various hostile remarks. Jung concluded:]

[1051] It is regrettable that the discussion failed to deal more specifically with the analysis presented here. The method of psychoanalytic research and treatment cannot be rejected as a whole unless on examination it turns out to be defective, but this was not done here. Psychoanalysis represents a radical theory which should be used together with other methods.

[1052] The view that it should not be used because its usefulness has not been proved or theoretically established cannot be supported by the facts [of the case], and it would disregard the principle of scientific research that practical experimentation is to be given preference over theoretical considerations.

[1053] Failures, naturally, do occur, but just as in other fields they do not permit us to draw conclusions of a general validity.

[1054] The discussion of sexual matters is admittedly not easy and not to everyone's taste; tactfully employed, however, it is an essential ingredient of any psychotherapy. — Dreams are often inexactly reported or added to; these additions are, however, as Freud has shown, not fortuitous coincidences, but governed by the same unconscious ideas that informed the dream itself. That childhood impressions persist throughout one's life, even if they seemingly are insignificant, is a certainty. The explanation for this is that such impressions have been repressed because of a certain significant conjunction of ideas, and for this very reason could survive in the unconscious until they were uncovered by analysis.

A COMMENT ON TAUSK'S CRITICISM OF NELKEN[1]

[1055] In the first issue of this periodical there was a review by Tausk of Nelken's "Analytische Beobachtungen über Phantasien eines Schizophrenen."[2] In this review I came upon the following passage:

> In the first catatonic attack the patient produced the fantasy that mice and rats were gnawing at his genitals. Nelken derives the symbolic significance of these animals from a suggestion of Jung's, who sees them as symbolizing nocturnal fear. There is no doubt that this interpretation is correct, but it comes from a later elaboration of this symbol and bars the way to deeper insight. Analysis of dreams and neuroses has taught me beyond question—and I find my view supported by other psychoanalysts—that mice and rats are cloacal animals and that they represent, in symbolic form, the defecation complex (anal complex).

[1056] I would like to defend Nelken's view against Tausk's. I do not doubt in the least that Tausk's view is also right. We have known this for a long time, and it has been completely confirmed once more by Freud's rat-man.[3] Further, we know very well that catatonic introversion and regression reactivate all the infantile impulses, as is evident from numerous observations in Nelken's analysis. So there is no question of this aspect of the case having escaped us; it merely seemed unimportant because by now it is self-evident. It is no longer of vital importance to know that the anal complex can act as a substitute for normal modes of transference or adaptation, since we know already that the pathological regression of libido reactivates every variety of infantile sexualism and produces infantile fantasies of every conceivable kind. Anyone who still thinks that a definite group of fantasies, or a "complex" has been singled out just hasn't seen enough cases. We therefore consider it irrelevant that the castration is performed by cloacal animals. Incidentally, mice are not "cloacal animals" but animals that live in holes, and this is a more comprehensive concept than "cloacal animals."

[1057] The only thing we learn from this interpretation is that an infantile complex or infantile interest takes the place of the normal interest. It may be of some value for the specialist to know that in this particular case it was the anal fantasy that contributed a bit of symbolism for the purpose of expressing the introversion and regression of libido. But this interpretation does not supply a generally applicable principle of explanation when we come to the far more important task of discovering the real functional significance of the castration motif. We cannot content ourselves with a simple reduction to infantile mechanisms and leave it at that.

[1058] I was once given a very impressive example of this kind of interpretation. In a discussion on the historical fish-symbol, one of those present remarked that the fish vanishing in the sea was simply the father's penis vanishing in his wife's vagina. This kind of interpretation, which I consider sterile, is what I call sexual concretism. It seems to me that psychoanalysts are confronted with the much greater and more important task of understanding what these analogies are trying to say. What did men of many different races and epochs mean by the symbol of the fish? Why—in the present case too, for that matter—were these infantile channels of interest reactivated? What does this fetching up of infantile material signify? For this obviously is the problem. The statement: "Infantile reminiscences are coming to the surface again" is vapid and self-evident. It also leads us away from the real meaning. In Nelken's case the problem is not the derivation of part of the rat-symbol from the anal complex, but the castration motif to which the fantasy obviously belongs. The rats and mice are the instrument of the castration. But there are many other kinds of castrating instrument which are by no means anally determined. Tausk's reduction of the rats is merely of value to the specialist and has no real significance as regards the problem of sacrifice, which is at issue here.

[1059] The Zurich school naturally recognizes that the material is reducible to simpler infantile patterns, but it is not content to let it go at that. It takes these patterns for what they are, that is, images through which the unconscious mind is expressing itself. Thus, with reference to the fish-symbol, we would argue as follows : We do not deny the Viennese school the possibility that the fish-symbol can ultimately be reduced to parental intercourse. We are ready to assume this provided there are fairly cogent reasons for doing so. But, because we are not satisfied with this relatively unimportant reduction, we ask ourselves what the evocation of parental intercourse or something similar means to the patient. We thus carry the assumption a stage further, because with the reduction to the infantile pattern we have not gained an understanding of the real significance of the fact that the reminiscence was regressively reactivated. Were we to remain satisfied with the reduction, we would come back again and again to the long-since-accepted truth that the infantile lies at the root of the mental world, and that adult mental life is built upon the foundations of the infantile psyche.

[1060] Even in the backwaters of the psychoanalytic school one should have got beyond marvelling over the fact that, for instance, the artist makes use of images relating to the incest complex. Naturally every wish has these infantile patterns which it makes use of in every conceivable variation in order to express itself. But if the pattern, the infantile element, were still absolutely operative (i.e., not just regressively reactivated), all mental products would turn out to be unbelievably trivial and deadly monotonous. It would always be the same old infantile story that formed the essential core of all mental products. Fortunately, the infantile motifs are not the essential; that is to say, for the most part they are regressively reactivated, and are fittingly employed for the purpose of expressing currents and trends in the actual present—and most clearly of all when the things to be expressed are as far-off and intangible as the most distant childhood. Nor should it be forgotten that there is also a future. The reduction to infantile material makes the inessential in art—the limited human expression—the essence of art, which consists precisely in striving for the greatest variety of form and the greatest freedom from the limitations of the conventional and the given.

[1061] Herbert Silberer[4] once made the very good observation that there is a mythological stage of cognition which *apprehends symbolically*. This saying holds good for the employment of infantile reminiscences: they aid cognition or apprehension and are expressive symbols. No doubt the infantile reminiscence or tendency is still partly operative and thus has an extraordinarily disturbing and obstructive effect in actual life. That is also the reason why it is so easy to find. But we would be wrong to regard it as a *source of energy* on that account; it is much more a limitation and an obstacle. But because of its undeniable existence it is at the same time a necessary means of expression by analogy, for the furthest reaches of fantasy cannot offer any other material for analogical purposes. Accordingly, even if we do approach the primitive images analytically, we are not content with reduction and with establishing their self-evident existence, but, by comparing them with similar material, we try rather to reconstruct the actual problem that led to the employment of these primitive patterns and seeks expression through them. In this sense we take incest primarily as a symbol, as a means of expression, as Adler too has suggested.

[1062] Hence I cannot agree with Tausk when he says that comparison with analogous material "bars the way to deeper insight." We do not regard the discovery of the anal fantasy as an insight that could be compared in importance with an understanding of the castration motif. I must therefore defend Nelken's attempt to establish general connections in a wider context. We can hardly expect proof of the self-evident existence of infantile fantasies to furnish any insight into the general problem of sacrifice, which makes use of the castration motif among others. That Nelken has this question in mind is clear from his footnote, in which he refers to the snake and scorpion as historical castration animals.

[1063] I have taken the liberty of dwelling at some length on Tausk's comment because it seemed to offer a favourable opportunity to sketch out our different approach to these matters. We do not by any means deny the possibility of Tausk's reduction, as should be obvious. But in this and all similar reductions we find nothing that seems to us to offer a satisfactory explanation. We believe, on the contrary, that a satisfactory explanation must make clear the teleological significance of the castration motif. In psychology, as is generally known, you cannot get very far with purely causal explanations, since a very large number of psychic phenomena can be satisfactorily explained only in teleological terms. This does nothing to alter or to detract from the exceedingly valuable discoveries of the Freudian school. We merely add the factor of teleological observation to what already exists. I have devoted a special study to this question, which will shortly appear in the *Jahrbuch*.[5]

[1064] Our attempts to develop and broaden the previous insights have given rise to absurd talk of a schism. Anything of that sort can only be the invention of people who take their working hypotheses as articles of faith. This rather childish standpoint is one which I do not share. My scientific views change with my experience and insight, as has always been the case in science generally. It would be a matter for suspicion if this were not so.

ANSWERS TO QUESTIONS ON FREUD[1]

On 24 July 1953. the representative of the *New York Times* in Geneva, Michael L. Hoffman, sent Jung the following questionnaire in connection with a projected article on Freud:

1. What part of Freud’s work do you accept?

2. What was the role of Freud’s work and views in the development of your own analytical psychology?

3. In your opinion does Freudian sexuality play any part in the aetiology of neuroses?

4. Would you care to make an estimate of Freud’s contribution to our knowledge of the psyche?

5. Would you care to comment on the value of Freud’s procedure as a therapeutic procedure?

[1065] As it is impossible to deal with a critique of Freud’s work in a short article I have to restrict myself to concise answers.

[1066] 1. I accept the facts Freud has discovered, but accept his theory only partially.

[1067] 2. The facts of repression, substitution, symbolization, and systematic amnesia described by Freud coincided with the results of my association experiments (1902–4). Later on (1906) I discovered similar phenomena in schizophrenia. I accepted in those years all of Freud’s views, but I could not make up my mind to accept the sexual theory of neurosis and still less of psychosis, no matter how much I tried. I came to the conclusion (1910) that Freud’s one-sided emphasis on sex must be a subjective prejudice.

[1068] 3. It is obvious that the sexual instinct plays a considerable role everywhere in life, and thus also in neurosis, and it is equally obvious that the power-drive, the many forms of fear, and the individual necessities are of equal importance. I object only to the uniqueness of sexuality as suggested by Freud.

[1069] 4. Freud’s contribution to our knowledge of the psyche is without doubt of the greatest importance. It yields an insight into the dark recesses of the human mind and character which can be compared only to Nietzsche’s *Genealogy of Morals*. In this respect Freud was one of the great cultural critics of the nineteenth century. His specific resentment explains the one-sideness of his explanatory principle.

[1070] One could not say that Freud is the discoverer of the unconscious—C. G. Carus and Eduard von Hartmann were before him and Pierre Janet was his contemporary—but he certainly showed a way to the unconscious and a definite possibility of investigating its contents. In this respect his book on dream interpretation proved to be most helpful, although from a scientific standpoint it is most objectionable.

[1071] 5. The question of psychological therapy is exceedingly complex. We know for certain that just any method or any procedure or any theory, seriously believed, conscientiously applied and supported by a humanly congenial understanding, can have a most remarkable therapeutic effect. Therapeutic efficacy is by no means the prerogative of any particular system; what counts is the character and the attitude of the therapist. For this reason I tell my pupils: you must know the best you can about the psychology of neurotic individuals as well as of yourself. If it is the best, you are likely to believe it, and then you can be serious enough to apply what you know with devotion and responsibility. If it is the best *you* know, then you will always entertain a reasonable doubt whether somebody else might not know better than yourself, and out of sheer compassion with your patient you will make sure that you don’t lead him astray. Therefore you will never forget to inquire how far he agrees or disagrees with you. When he disagrees you are stuck, and if this fact is overlooked both doctor and patient are fooled.

[1072] Theory is important in the first place for science. In practice you can apply as many theories as there are individuals. If you are honest you will preach your individual gospel, even if you don’t know it. If you are right, it will be good enough. If you are wrong, even the best theory will be equally wrong. Nothing is worse than the right means in the hands of the wrong man. Never forget that the analysis of a patient analyses yourself, as you are just as much in it as he is.

[1073] I am afraid psychotherapy is a very responsible business and anything but an impersonal application of a convenient medical method. There was a time when the surgeon did not even think of washing his hands before an operation, and the time is still with us when doctors believe they are not personally concerned when they apply psychotherapeutic methods.

[1074] For this reason I object to any kind of prejudice in the therapeutical approach. In Freud's case I disagree with his materialism, his credulity (trauma theory), his fanciful assumptions (totem and taboo theory), and his asocial, merely biological point of view (theory of neurosis).

[1075] This is a mere outline of critical viewpoints. I myself regard such statements as futile, since it is much more important to put forward facts that demand an altogether different conception of the psyche, i.e., new facts unknown to Freud and his school.

[1076] It has never been my purpose to criticize Freud, to whom I owe so much. I have been far more interested in the continuation of the road he tried to build, namely the further investigation of the unconscious so sadly neglected by his own school.

VII

ON SYMBOLISM

(related to Volume 5 of the Collected Works)

[Though not recorded by Jung himself, these brief abstracts are included as evidence of Jung’s preparatory work for *Wandlungen und Symbole der Libido* (1911–12), revised as *Symbols of Transformation* (1952). *The Freud/Jung Letters* contains references to preliminary drafts, e.g., the unrecovered “Herisau lecture,” in 193J, par. 3, which Freud subjected to detailed criticism in 199aF.]

THE CONCEPT OF AMBIVALENCE[1]

[1077] *Discussion.*[2] C. G. Jung: The concept of ambivalence is probably a valuable addition to our terminology. In one and the same thing the opposite may be contained. *Altus* = high and deep. Pleasure may derive from pain. This implies not a sequence of one after the other, but a simultaneous one-in-the-other: a uniform given. He [Jung] objects to the statement “Ambivalence is the driving force.” Ambivalence probably is not the driving force, but rather a formal aspect as we find it everywhere. Freud has adduced many examples from the history of language. Modern words too show ambivalence, e.g., *sacré,*[3] *luge* (Irish) = contract;[4] *bad* (English) = *bat* = *bass* (Middle High German) = good. Through the migration of language the meaning of a word is transformed into its historical opposite. Dreams make use of similarities as well as of opposites. Among the possibilities of similarity, contrast is closest at hand. He, Jung, had this dream: *He is a small man with a beard, wears no glasses and is no longer young*. Hence, everything the opposite. If we want to demonstrate our psychoanalytic view, we too, just like the anatomists, command an unambiguous kind of material that we find in the monuments of antiquity and in the field of mythology. For example, the fertility god is at the same time the destroyer (Indra). The sun means fertility and destruction. Therefore we have the lion as a zodiac sign standing for the intense heat of the sun. Ambivalence is evident in the mythological successions. Odin becomes the wild hunter who molests lonely girls on the highways. Freia has turned into a she-devil. Venus, as the philologists teach us, acquired a good aspect and turned into St. Verena (St. Verena, the patron saint of Baden, Ct. Aargau; watering places, as we know from history, were consecrated and subject to Venus). St. Verena, Venus, however, also lends her name to dangerous mountains (Verenelisgärtli near the Glärnisch; St. Verenakehle is the name of the great avalanche chute on the Schafburg in the Säntis mountains). *Devas*

(Sanskrit, = angel) becomes the devil in Persian. The snake on the pole corresponds to the ambivalence of the concept of Christ.

[1078] The representation of libido oscillates between the symbols of the lion and the snake, the principle of dry and wet: both are opposite sexual or phallic symbols. Jung saw a stele of Priapus in Verona. The god smilingly holds a basket full of phalli on his arm and points with the other hand to a snake which bites off his erect penis.[5]

[1079] Nice examples of ambivalence are shown by the language of erotic jokes, such as occur in the *Golden Ass* of Apuleius;[6] also in the language of mysticism; Mechtild of Magdeburg says: “By Christ’s love I have been wounded unto death.” Through the killing of the bull (in the Mithras mythologies) creation is brought about. “The bull is the father of the snake and the snake is the father of the bull.”[7] Our Christian religious ideas are likewise based on this principle. Through Christ’s death, man is redeemed for life eternal. We encounter the same idea in the cult of Mithras, which was of great importance in antiquity and helped spread the concepts of Christianity.

* * *

[1080] *Discussion.*[8] C. G. Jung: The expression “taken off my chest”[9] in reference to the discussion of the tormenting complex is very apt and characteristic of analytic therapy. An officer, whenever his complex was about to get the better of him, commanded: “Attention— halt! Six paces to the rear—march!” and every time felt very much relieved by this objectivation of his disease.

* * *

[1081] *Discussion.*[10] As a contribution from child psychology to the significance of sacrifice, C. G. Jung tells about the “Tantalus Club” which was founded by some youngsters for the celebration of sexual mysteries. Their emblem depicted a man who hung from a gallows by a rope tied to his penis and his nose. The sacrificed and tormented were the youngsters themselves, just like Tantalus whose torment consists in constantly being denied satisfaction of his most ardent desires.

CONTRIBUTIONS TO SYMBOLISM[1]

[1082] Starting from the contrast that exists between hysterical fantasies and those of dementia praecox, the lecturer points out that in order to understand the latter, historical parallels must be adduced, because in dementia praecox the patient suffers from the reminiscences of mankind. In contrast to hysteria, his language uses ancient images of universal validity, even though at first glance they seem incomprehensible to us.

[1083] The case of a 34-year-old female neurotic serves to illustrate how a recent fantasy can be documented and elucidated by historical material. The patient’s fantasy deals with a man she loves unrequitedly who is suspended by the genitals, a fantasy which was also found in a 9-year-old boy as a symbolic expression of his unfulfilled libido (“Hanging and fearing, suspended in pain”).[2] This fantasy, when taken together with corresponding ethnological traditions and mythological parallels of the sacrifice of the god of spring by hanging or flaying, signifies a sacrifice of sexuality which one hangs on to and cannot get rid of and which in ancient cults was offered to the Great Mother as a sacrifice of the phallus.[3]

VIII

TWO ESSAYS ON ANALYTICAL PSYCHOLOGY

(related to Volume 7 of the Collected Works)

ADAPTATION, INDIVIDUATION, COLLECTIVITY[1]

1. Adaptation

[1084] A. *Psychological adaptation* consists of two processes:

1. Adaptation to outer conditions.
2. Adaptation to inner conditions.

[1085] By outer conditions are meant not only the conditions of the surrounding world, but also my conscious judgments, which I have formed of objective things.

[1086] By inner conditions are meant those facts or data which force themselves upon my inner perception from the unconscious, independently of my conscious judgment and sometimes even in opposition to it. Adaptation to inner conditions would thus be adaptation to the unconscious.

[1087] B. In *neurosis* the adaptation process is disturbed, or rather we might say that the neurosis is itself a disturbed or diminished process of adaptation that takes two basic forms:

1. Disturbance of adaptation to outer conditions.
2. Disturbance of adaptation to inner conditions.

[1088] In the first case we must again distinguish two different and fundamental situations:

1. Adaptation to outer conditions is disturbed because the subject tries to adapt entirely and exclusively to the outside, while entirely neglecting the inside, thereby upsetting the balance of the act of adaptation.

2. The disturbance arises from a preferential adaptation to the inside.

[1089] Equally, adaptation to inner conditions can be disturbed in two ways:

1. By exclusive adaptation to the outside.

2. By neglect of the outside in favour of adaptation to the inside.

[1090] C. *The Energetics of Adaptation:* These considerations lead to the energetics of the adaptation process. When the libido invested in a particular function cannot be equilibrated by the exercise of the function, it accumulates until it attains a value which exceeds that of the neighbouring functional system. Then a process of equilibration begins, because a potential is present. The energy flows over, as it were, into another system. When, therefore, adaptation to the inside is not achieved, the libido intended for that purpose accumulates until it begins to flow out of the system of inner adaptation into the system of outer adaptation, with the result that characteristics belonging to inner adaptation are carried over into outer—that is to say, fantasies intervene in the relation to the real world. Conversely, when the system of outer adaptation overflows into the system of inner adaptation, characteristics belonging to the former are carried over into the latter, namely, qualities belonging to the reality-function.

[1091] D. *Adaptation in Analysis:* Adaptation in analysis is a special question. During the analysis, experience shows that, barring quite exceptional circumstances, the analysis is the main thing. There is no categorical imperative, "The analysis *must* be the main thing"; it is simply that, judging by the average run of experience, the analysis *is* the main thing. Hence the main achievement is in the first place adaptation to the analysis, which for one patient is represented by the person of the analyst, and for another by the "analytical idea." The purpose in either case is to secure trust: the one who starts off with an unconscious mistrust of his fellow seeks above everything to make sure of the personality of the analyst; the other, whose main desire is to be instructed about the reliability of methods of thinking, seeks above everything to understand the basic ideas.

[1092] As the analysis proceeds, the former must naturally catch up in understanding the idea, the latter in learning to trust the analyst's personality.

When adaptation has been carried thus far, the analysis is generally held to have come to an end for all practical purposes, in so far as it is assumed that this personal balance is the essential aim and demand. There is, on the fact of it, nothing to be said against this view.

[1094] Experience shows, however, that in certain and not too uncommon cases a demand is raised by the unconscious, which expresses itself to begin with in the extraordinary intensity of the transference, and in the influence thus exerted on the patient's lifeline. This heightened transference seems, at first, to contain the demand for a particularly intensive adaptation to the analyst, and for the time being it should be accepted as such, though it is at bottom an over-compensation for a resistance to the analyst that is felt to be irrational. This resistance arises from the demand for individuation, which is *against* all adaptation to others. But since the breaking of the patient's previous personal conformity would mean the destruction of an aesthetic and moral ideal, the first step in individuation is a tragic *guilt*. The accumulation of guilt demands *expiation*. This expiation cannot be offered to the analyst, for that would only restore the patient's personal conformity. The guilt and its expiation call for a *new collective function:* just as before the object of faith and love, namely the image of the analyst, was a *representative* of humanity, so now humanity itself takes the place of the analyst and to it is offered the expiation for the guilt of individuation.

[1095] Individuation cuts one off from personal conformity and hence from collectivity. That is the guilt which the individuant leaves behind him for the world, that is the guilt he must endeavour to redeem. He must offer a ransom in place of himself, that is, he must bring forth values which are an equivalent substitute for his absence in the collective personal sphere. Without this production of values, final individuation is immoral and—more than that—suicidal. The man who cannot create values should sacrifice himself consciously to the spirit of collective conformity. In so doing, he is free to choose the collectivity to which he will sacrifice himself. Only to the extent that a man creates objective values can he and may he individuate. Every further step in individuation creates new guilt and necessitates new expiation. Hence individuation is possible only so long as substitute values are produced. Individuation is exclusive adaptation to inner reality and hence an allegedly "mystical" process. The expiation is adaptation to the outer world. It has to be offered to the outer world, with the petition that the outer world accept it.

[1096] The individuant has no *a priori* claim to any kind of esteem. He has to be content with whatever esteem flows to him from outside by virtue of the values he creates. Not only has society a right, it also has a duty to condemn the individuant if he fails to create equivalent values, for he is a deserter.

[1097] When, therefore, the demand for individuation appears in analysis under the guise of an exceptionally strong transference, it means farewell to personal conformity with the collective, and stepping over into solitude, into the cloister of the inner self. Only the shadow of the personality remains in the outer world. Hence the contempt and hate that come from society. But inner adaptation leads to the conquest of inner realities, from which values are won for the reparation of the collective.

[1098] Individuation remains a pose so long as no positive values are created. Whoever is not creative enough must re-establish collective conformity with a group of his own choice, otherwise he remains an empty waster and windbag. Whoever creates *unacknowledged* values belongs to the contemned, and he has himself to blame for this, because society has a right to expect *realizable* values. For the existing society is always of absolute importance as the point of transition through which all world development passes, and it demands the highest collaborative achievement from every individual.

2. Individuation and Collectivity

[1099] Individuation and collectivity are a pair of opposites, two divergent destinies.[2] They are related to one another by guilt. The individual is obliged by the collective demands to purchase his individuation at the cost of an equivalent work for the benefit of society. So far as this is possible, individuation is possible. Anyone who cannot do this must submit directly to the collective demands, to the demands of society, or rather, he will be caught by them automatically. What society demands is *imitation* or conscious identification, a treading of accepted, authorized paths. Only by accomplishing an equivalent is one exempted from this.

There are *very many people* who *at first* are altogether incapable of accomplishing this equivalent. They are therefore bound to the well-trodden path. If they are pushed off it, they are seized by helpless anxiety, from which only another of the prescribed paths can deliver them. Such people can achieve self-reliance only after imitating for a very long time one of the models they have chosen. A person who by reason of special capacities is entitled to individuate must accept the contempt of society until such time as he has accomplished his equivalent. Only a few are capable of individuating, because individuation rules out any renunciation of collective conformity until an equivalent has been accomplished whose objective value is acknowledged. Human relationship establishes itself automatically on the basis of an acknowledged equivalent, because the libido of society goes directly towards it. Without the equivalent, all attempts at conformity are foredoomed to failure.

[1100] Through imitation, one's own values become *reactivated*. If the way to imitation is cut off, they are nipped in the bud. The result is helpless anxiety. If the imitation is a demand made by the analyst, i.e., if it is a demand for the sake of adaptation, this again leads to a destruction of the patient's values, because imitation is an automatic process that follows its own laws, and lasts as long and goes as far as is necessary. It has quite definite limits which the analyst can never know. Through imitation the patient learns individuation, because it reactivates his own values.

[1101] The collective function may be divided into two functions, which from the "mystical" or metapsychological point of view are identical:

1. The collective function in relation to society.
2. The collective function in relation to the unconscious.

[1102] The unconscious is, as the collective psyche, the psychological representative of society. The persona can have no relation to the unconscious since it is collectively identical with it, being itself collective. Hence the persona must be extinguished or, in other words, restored to the unconscious. From this arises individuality as one pole that polarizes the unconscious, which in turn produces the counterpole, the God-concept.

[1103] The individual must now consolidate himself by cutting himself off from God and becoming wholly himself. Thereby and at the same time he also separates himself from society. Outwardly he plunges into solitude, but inwardly into hell, distance from God. In consequence, he loads himself with guilt. In order to expiate this guilt, he gives his good to the soul, the soul brings it before God (the polarized unconscious), and God returns a gift (productive reaction of the unconscious) which the soul offers to man, and which man gives to mankind. Or it may go another way: in order to expiate the guilt, he gives his supreme good, his love, not to the soul but to a human being who stands for his soul, and from this human being it goes to God and through this human being it comes back to the lover, but only so long as this human being stands for his soul. Thus enriched, the lover begins to give to his soul the good he has received, and he will receive it again from God, in so far as he is destined to climb so high that he can stand in solitude before God and before mankind.

[1104] Thus I, as an individual, can discharge my collective function either by giving my love to the soul and so procuring the ransom I owe to society, or, as a lover, by loving the human being through whom I receive the gift of God.

[1105] But here as well there is a discord between collectivity and individuation: if a man's libido goes to the unconscious, the less it goes to a human being; if it goes to a human being, the less it goes to the unconscious. But if it goes to a human being, and it is a true love, then it is the same as if the libido went direct to the unconscious, so very much is the other person a representative of the unconscious, though only if this other person is truly loved.

[1106] Only then does love give him the quality of a mediator, which otherwise and in himself he would not possess.

FOREWORD TO THE HUNGARIAN EDITION OF JUNG: “ON THE PSYCHOLOGY OF THE UNCONSCIOUS”[1]

[1107] The Hungarian translation of my book *On the Psychology of the Unconscious,*[2] by Dr. Peter Nagy, carefully collated and checked by Dr. Jolande Jacobi, deserves to be greeted as a novum since this is the first Hungarian publication of any of my writings. Except for a few translations into Russian, one of my earliest books now appears in a language of Eastern Europe for the first time. I am indebted to Dr. Jacobi not only for making this possible, but more particularly because she was closely associated with the revision of this book and its publication, and was ready with helpful suggestions and useful advice. It is also due to her conscientious collaboration that the Hungarian edition is equipped with an index, lacking in the Swiss edition, as well as with a short glossary to elucidate the terminology, which is often difficult and new, attaching to the theme.

[1108] For it is a particular pleasure that my book is now available in Hungary, a country from which signs of the liveliest interest have again and again come my way. I hope to pay off a little of my debt of gratitude, at least indirectly, with this foreword. Of my many pupils, who all come from the Western half of the world, Dr. Jacobi is the first Hungarian; she has worked for years under my personal direction in Zurich, and in so doing has acquired a profound knowledge of that very extensive and difficult territory, the psychology of the unconscious. In her book *The Psychology of C. G. Jung,*[3] an excellent introduction to my work in general, she has given evidence of this. Her knowledge also guarantees the accuracy and fidelity of the translation, so very necessary in dealing with such tricky and delicate material as the psychology of the unconscious.

[1109] This essay makes no claim to be a comprehensive exposition; its aim is to acquaint the reader with the main problems of the psychology of the unconscious, and this only within the limits prescribed by direct medical experience. As it does not pretend to be more than an introduction, the manifold relations with the history of human thought, mythology, religion, philosophy, the psychology of primitives, and so on are only hinted at.

Küsnacht-Zurich, January 1944

IX

THE STRUCTURE AND DYNAMICS OF THE PSYCHE

(related to Volume 8 of the Collected Works)

FOREWORDS TO JUNG: "ÜBER PSYCHISCHE ENERGETIK UND DAS WESEN DER TRÄUME"[1]

First Edition (1928)

[1110] In this volume, the second of the *Psychologische Abhandlungen,*[2] I am publishing four papers of which three have so far appeared only in English.[3] One of the papers deals with the still unsolved problem of dream interpretation, while the others are concerned with—in my view—a question of central importance: the fundamental psychic factors, the *dynamic images*, which it seems to me express the nature of psychic energy. My concept of psychic energy, first put forward in *Wandlungen und Symbole der Libido* (1912),[4] has met with so much opposition and misunderstanding that it seemed to me worth working over the problems of psychic energetics once again, this time not from the practical but from the theoretical side. The reader, therefore, need fear no repetitions.

Küsnacht-Zurich 1928

Second Edition (*1948*)

[1111] The papers in this volume are attempts to introduce some order into the chaotic profusion of psychic phenomena by means of concepts that are current in other fields of research besides psychology. Since our psychological knowledge is still in its infancy, our primary concern must be with elementary concepts and groups of facts, and not with the individual complications in which our case histories abound, and which can never be completely elucidated. The Freudian "model" of neurosis and dreams gives only a partial explanation of the empirical material. As medical psychologists, we must seek to refine our methods as well as our psychological concepts, more particularly because the "academic" psychologists have abandoned the attempt to investigate the unconscious empirically. It falls to the lot of the medical psychologist to probe more deeply into the compensatory relationship between conscious and unconscious which is so vital for an understanding of the psyche as a whole.

[1112] Except for some improvements I have made no drastic alterations to the text. The number of papers has been increased to six, as I have added a short “Review of the Complex Theory” and some recent aperçus on dream research, “On the Nature of Dreams.”[1]

Küsnacht-Zurich, May 1947

ON HALLUCINATION[1]

[1113] Hallucination is not merely a pathological phenomenon but one that also occurs in the sphere of the normal. The history of prophecy as well as experiences among primitives show that psychic contents not infrequently come to consciousness in hallucinatory form. In this respect only the form is worthy of note, not the function, which is nothing other than what is commonly called a "brain wave" [*Einfall]*. As the word itself indicates, a certain spontaneity attaches to the phenomenon; it is as though the psychic content had a life of its own and forced its way into consciousness by its own strength. This peculiarity probably explains the ease with which the brain wave assumes an hallucinatory character. Common speech is familiar with these transitions from brain wave to hallucination. In the mildest cases we say: "I thought"; "it occurred to me" is a little stronger; stronger still is "it was as though an inner voice said," and finally "it was as though someone were calling to me," or "I heard a voice quite distinctly."

[1114] Hallucinations of this kind usually derive from the still subliminal, maturer personality which is not yet capable of direct consciousness, as observations of somnambulists show. In the case of primitive medicine-men they come from a subliminal thinking or intuiting which at that level is not yet capable of becoming conscious.

FOREWORD TO SCHLEICH: “DIE WUNDER DER SEELE”[1]

[1115] When, after many years, I again took up the works of Carl Ludwig Schleich and tried to capture the mental world of this remarkable thinker in a telling image, what persistently came into my mind was the indelible impression which another powerful thinker—very unlike Schleich and yet so very like him—had made upon me: Paracelsus. Odd bedfellows indeed—the contemporary of the humanists and the modern, forward-looking Schleich, separated by four centuries of spiritual growth and change, not to speak of differences of personality. The very idea would have struck me as preposterous had I not been strangely moved just by the affinity of opposites. Above all, it seemed to me significant that Paracelsus stood at the beginning of an epoch in the history of medicine and Schleich at its end. Both were typical representatives of a period of transition, and both of them revolutionaries. Paracelsus cleared the way for scientific medicine, benighted at times by age-old animistic beliefs yet filled with the liveliest apprehension of an age in which the intangibles of the soul would be replaced by a massive materialism. Schleich was a revolutionary in the opposite sense. Although steeped in anatomical and physiological concepts, he boldly reached out towards the very same psychic realm upon which Paracelsus, obeying the dictates of his age, had half-reluctantly turned his back. Both were enthusiasts, uplifted and fortified by the certitudes of their vision, optimistically credulous, rejoicing in their hopes, pioneers of a new spiritual outlook who went their head-spinning way sure-footed and undismayed. Both gazed fearlessly into suprahuman, metaphysical abysses and both avowed their faith in the eternal images deeply engraved in the human psyche. Paracelsus’ way took him down to the divine but essentially pre-Christian *prima materia*, the “Hyliaster.”[2] Schleich, starting from the darkness of the blood vessels, ducts, and the labyrinth of the nerve-endings, mounted the ganglionic ladder of the sympathetic nervous system to a transcendental soul which appeared to him in all its Platonic glory in the “supracelestial place.” Both were inspired by the effervescence of an age of decay and change. Both were born out of their time, eccentric figures eyed askance by their contemporaries. One's contemporaries are always dense and never understand that enthusiasm, and what appears to them to be unseemly ebullience come less from personal temperament than from the still unknown well-springs of a new age. How people looked askance at Nietzsche's volcanic emotion, and how long he will be spoken of in times to come! Even Paracelsus has now been gratefully disinterred after four hundred years in an attempt to resuscitate him in modern dress. What will happen with Schleich? We know that he was aiming at that unitary vision of psychic and physical processes which has given the strongest impetus to medical and biological research today. Though hampered by a terminology inherited from an age of scientific materialism, he broke through the narrow confines of a de-psychized materiality and crossed the threshold, barricaded with thorny prejudices, which separated the soul from the body. And though he had no knowledge of my own efforts, which for a long time remained unknown to the scientific public in Germany, in his own way he fought shoulder to shoulder with me for the recognition of the soul as a factor *sui generis*, and thus broke a new path for psychology, which till then had been condemned to get along without a psyche.

[1116] The breakthrough initiated by Paracelsus led the way out of medieval scholasticism into the then unknown world of matter. This is the great and essential service which has placed medicine forever in his debt. And it is not isolated facts, methods, or laws which make Schleich important for us, but his pushing forward into a new field of vision where the mass of known facts appears in a new and different light. By syncretizing all our previous knowledge and seeking a standpoint from which to gain a view of the whole, he succeeded in escaping from the charmed circle of pure empiricism and touched upon the very foundation of the empirical method itself, though most people are quite unaware of it. This fundamental thing is the relation of the body's chemistry to psychic life. Paracelsus ultimately decided in favour of "chemism," despite his allegiance to a view of the world dominated by the spirit as the highest authority. Schleich, four hundred years later, decided in favour of psychic animation, and thus raised the psyche from its undignified position as a subsidiary product to that of the *auctor rerum*. With a bold stroke he put the mechanisms and chemisms of the body in a new hierarchy. The “vestigial’ sympathetic nervous system, an apparently fortuitous tangle of ganglionic nodes that regulate the vegetative functions of the body in an astoundingly purposive way, becomes the matrix of the cerebrospinal system, whose crowning miracle, the brain, seems to our fascinated gaze the controller of all bodily processes. Nay more: the sympathetic system is, for Schleich, the mysterious “cosmic nerve,” the true “ideoplast,” the original and most immediate realization of a body-building and body-sustaining World Soul, which was there before mind and body came into existence. The Hyliaster of Paracelsus is thus stripped of its unfathomable creative secret. Once again the solidity and tangibility of matter, so fervently believed in and so convincing to the senses, dissolve into Maya, into a mere emanation of primordial thought and will, and all hierarchies and all values are reversed. The intangible, the psyche, becomes the ground and substrate, and the “merely vegetative” sympathetic system the possessor and realizer of unthinkable creative secrets, the vehicle of the life-giving World Soul, and, ultimately, the architect of the brain, this newest achievement of the pre-existent creative will. What lay modestly hidden beneath the overwhelming grandeur of the cerebrospinal system, which, as the vehicle of consciousness, seems to be identical with the psyche as such—this same sympathetic system is “psyche” in a deeper and more embracing sense than is the interplay of the cortical fields of the cerebrum. Notwithstanding its quantitative and qualitative insignificance, it is the exponent of a psyche far excelling consciousness both in depth and scope, and is not, like this, defencelessly exposed to the potions of the endocrine system, but itself creates these magical secretions with single-minded purposiveness.

[1117] Just as Paracelsus laboured to concoct sylphids and succubi out of mandrakes, hangman’s amulets, and the blackest folk-medicine in his alchemical retort while yet having intimations of the truth, so Schleich spoke the language of the best “brain mythology” of the pre-war era and yet penetrated into the deepest problems and symbols of the human psyche, following his inner intuition and without knowing what he was doing. His soaring imagination transmuted figures of speech into forms which, unbeknownst to him, are actually archetypes of the collective unconscious that manifest themselves wherever introspection seeks to plumb the depths of the psyche, as for instance in Indian and Chinese yoga.

[1118] Schleich was thus a pioneer not only in somatic medicine but also in the remoter reaches of psychology, where it coalesces with the vegetative processes of the body. This is without doubt the darkest area of all, which scientific research has long sought to elucidate in vain. It is just this darkness which fascinated Schleich's mind and let loose a spate of imaginative ideas. Though they were not based on any new facts, they will certainly stimulate new interpretations and new modes of observation. As the history of science shows, the progress of knowledge does not always consist in the discovery of facts but, just as often, in opening up new lines of inquiry and in formulating hypothetical points of view. One of Schleich's favourite ideas was that of a psyche spread through the whole of the body, and dependent more on the blood than on grey matter. This is a brilliant notion of incalculable import. It enabled him to reach certain conclusions as to the way in which the psychic processes are determined, and these conclusions have independently confirmed my own research work. I am thinking chiefly of the historical factors determining the psychic background, as formulated in my theory of the collective unconscious. The same might be said of the mysterious connections between the psyche and the geographical locality, which Schleich linked up with dietetic differences—a possibility that should not be dismissed out of hand. When one considers the remarkable psychic and biological changes to which European immigrants are subject in America,[3] one cannot help feeling that in this matter science has still a number of important problems to solve.

[1119] Although Schleich's thought and language were wholly dependent on the data of the body, he was nevertheless impressed by the incorporeal nature of the psyche. What struck him about dreams was their spacelessness and timelessness, and for him hysteria was a "metaphysical problem"—metaphysical because the "ideoplastic" capacities of the unconscious psyche were nowhere more palpably in evidence than in the neuroses. Marvelling he gazed at the bodily changes wrought by the unconscious in hysteria. One can see from this almost childlike amazement how new and unexpected such observations were for him, although for the psychopathologist they have long been truisms. But one also sees from what generation of medical men he came—a generation blinded by prejudice, that passed unheedingly by the workings of the psyche upon the body, and even with its first, groping steps in psychology believed that the psyche could be dispensed with. Considering this lack of psychological knowledge, it is all the more astonishing and greatly to Schleich's credit that he was able to break through to a recognition of the psyche and to a complete reversal of biological causality. His conclusions seem almost too radical to the psychologist, or at any rate over-audacious, since they trespass upon regions which philosophical criticism must put beyond the bounds of human understanding.

[1120] Schleich's limited knowledge of psychology and his enthusiasm for intuitive speculation are responsible for a certain lack of reflection and for the occasional shallow patches in his work, for instance, his blindness to the psychic processes in dreams, which he sees through the spectacles of materialistic prejudice. Again, there is no inkling of the philosophical and moral problems that are conjured up by his identification of conscience with the function of hormones. Schleich thus paid tribute to the scientific past and to the spirit of the Wilhelmine era, when the authority of science swelled into blind presumption and the intellect turned into a ravening beast. But he saw very clearly that if medicine considered only the body and had no eyes for the living man, it was doomed to stultification. For this reason he turned away from the investigation of mere facts and used his knowledge of biology for wider purposes, to construct a bold synoptic view which would eradicate the grave errors of an obsolete materialism. The nineteenth century did everything it could to bring the psyche into disrepute, and it is Schleich's great achievement to have thrust the psychic meaning of vital processes into the light of day. His works may serve as an introduction to the revolution that has taken place in our general outlook and extricated us from the straitjacket of academic specialism.

FOREWORD TO JACOBI: “THE PSYCHOLOGY OF C. G. JUNG”[1]

[1121] The present work, I believe, meets a generally felt need which I myself up to now have not been in a position to satisfy—the wish for a concise presentation of the elements of my psychological theories. My endeavours in psychology have been essentially pioneer work, leaving me neither time nor opportunity to present them systematically. Dr. Jacobi has taken this difficult task upon herself with a happy result, having succeeded in giving an account free from the ballast of technical particulars. It is a synopsis that includes or at least touches upon all essential points, so that it is possible for the reader—with the aid of the references and the bibliography of my writings—to orient himself readily wherever needful. An additional merit is that the text has been supplemented with a number of diagrams, which are a help in understanding certain functional relations.

[1122] It is a particular satisfaction to me that the author has been able to avoid furnishing any support to the opinion that my researches constitute a doctrinal system. Expositions of this kind slip all too easily into a dogmatic style which is wholly inappropriate to my views. Since it is my firm conviction that the time for an all-inclusive theory, taking in and describing all the contents, processes, and phenomena of the psyche from one central viewpoint, has not yet arrived, I regard my concepts as tentative attempts to formulate a scientific psychology based in the first place upon immediate experience with human beings. This is not a kind of psychopathology, but a general psychology which also takes cognizance of the empirical material of pathology.

[1123] I hope that it may be the lot of this book not only to give the general reader an insight into my researches, but also to save him much laborious searching in his study of them.

August 1939

Foreword to the Spanish Edition[1]

[1124] It gives me particular pleasure to know that this book is now appearing in a Spanish translation. It will acquaint the Spanish public with the most recent developments of a psychology that has grown out of the experiences of the physician's art. This psychology is concerned with complex psychic phenomena that are continually encountered in daily life. It is not an abstract academic science, but a formulation of practical experiences which remains faithful to the scientific method. As a result, this psychology includes within its scope wide areas of other sciences and of life in general. My very best wishes accompany this book on its journey through the world.

FOREWORD TO HARDING: “PSYCHIC ENERGY”[1]

[1125] This book presents a comprehensive survey of the experiences of analytical practice, a survey such as anyone who has spent many years in the conscientious pursuit of professional duties may well feel the need of making. In the course of time, insights and recognitions, disappointments and satisfactions, recollections and conclusions mount to such proportions that one would gladly rid oneself of the burden of them in the hope not merely of throwing out worthless ballast but also of presenting a summation which will be useful to the world of today and of the future.

[1126] The pioneer in a new field rarely has the good fortune to be able to draw valid conclusions from his total experience. The efforts and struggles, the doubts and uncertainties of his voyage of discovery have penetrated his marrow too deeply to allow him the perspective and clarity of vision needed for a comprehensive survey. Those of the second generation, who base their work on the groping experiments, the lucky hits, the circuitous approaches, the half truths and mistakes of the pioneer, are less burdened and can take more direct roads, envisage more distant goals. They can cast off many doubts and hesitations, concentrate on essentials, and, in this way, map out a simpler and clearer picture of the newly discovered territory. This simplification and clarification redound to the benefit of those of the third generation, who are thus equipped from the outset with an over-all chart. With this chart they are enabled to formulate new problems and mark out the boundary lines more sharply than ever before.

[1127] We can congratulate the author on the success of her attempt to provide a general orientation on the problems of medical psychotherapy in its most modern aspects. Her many years of practical experience have stood her in good stead; without them her undertaking would not have been possible at all. For it is not a question, as many believe, of a “philosophy,” but rather of facts and their formulation, which in turn must be tested in practice. Concepts like “shadow” and “anima” are in no sense intellectual inventions. They are designations for psychic facts of a complex nature which are empirically verifiable. These facts can be observed by anyone who takes the trouble to do so and who is able to lay aside his preconceived ideas. Experience shows how difficult this is. For instance, how many people still labour under the delusion that the term archetype denotes an inherited idea! Such completely unwarranted assumptions naturally make any understanding impossible.

[1128] It is to be hoped that Dr. Harding’s book, with its simple and lucid exposition, will be especially suited to dispel such absurd misunderstandings. In this respect it can be of the greatest service not only to the doctor but also to the patient. I should like to emphasize this point particularly. It is obviously necessary for a doctor to have an adequate understanding of the material laid before him; but if he is the only one who understands, it is of no great help to the patient, since he is actually suffering from lack of consciousness and should therefore become more conscious. To this end, he needs knowledge; and the more of it he acquires, the greater is his chance of overcoming his difficulties. For those of my patients who have reached the point where greater spiritual independence is necessary, Dr. Harding’s book is one that I should unhesitatingly recommend.

Küsnacht-Zurich, July 8, 1947

ADDRESS ON THE OCCASION OF THE FOUNDING OF THE C. G. JUNG INSTITUTE, ZURICH, 24 APRIL 1948[1]

[1129] It is a particular pleasure and satisfaction for me to have the privilege of speaking to you on this memorable day of the founding of an Institute for Complex Psychology. I am honoured that you have come here for the purpose of establishing this institute of research which is designed to carry on the work begun by me. I hope, therefore, I may be allowed to say a few words about what has been achieved up to the present, as well as about our aims for the future.

[1130] As you know, it is nearly fifty years since I began my work as a psychiatrist. At that time, the broad fields of psychopathology and psychotherapy were so much wasteland. Freud and Janet had just begun to lay the foundations of methodology and clinical observation, and Flournoy in Geneva had made his contribution to the art of psychological biography, which is still far from being appreciated at its true value. With the help of Wundt’s association experiments, I was trying to evaluate the peculiarities of neurotic states of mind as exactly as possible. In the face of the layman’s prejudice that the psyche was something immeasurably subjective and boundlessly capricious, my purpose was to investigate what appeared to be the most subjective and most complicated psychic process of all, namely, the associative reaction, and to describe its nature in numerically expressible quantities. This work led directly to the discovery of the *feeling-toned complex*, and indirectly to a new question, namely, the problem of *attitude*, which exerts a decisive influence upon the associative reaction. The answer to this question was found by clinical observation of patients and by analysis of their behaviour. From these researches there emerged a *psychological typology*, which distinguished two attitude-types, the extravert and the introvert, and four function-types corresponding to the four orienting functions of consciousness.

[1131] The existence of complexes and of typical attitudes could not be adequately explained without the hypothesis of the unconscious. From the beginning, therefore, the above-mentioned experiments and researches went hand in hand with an investigation of unconscious processes. This led, about 1912, to the actual discovery of the *collective unconscious*. The term itself is of a later date. If the theory of complexes and type psychology had already overstepped the bounds of psychiatry proper, with the hypothesis of the collective unconscious the scope of our researches was extended without limit. Not only the domain of normal psychology, but also those of racial psychology, folklore, and mythology in the widest sense became the subject-matter of complex psychology. This expansion found expression in the collaboration with the sinologist Richard Wilhelm and the indologist Heinrich Zimmer. Both are now dead, but our science has not forgotten the inestimable contribution they made. Wilhelm above all introduced me to medieval Chinese alchemy and thus prepared the ground for an understanding of the rudiments of modern psychology that are to be found in the medieval texts. Into the painful gap left by the death of these two fellow workers there stepped, a few years ago, Karl Kerényi, one of the most brilliant philologists of our time. Thus a wish I personally had long cherished saw fulfillment, and our science was granted a new helper.[1a]

[1132] The insights gained originally in the domains of psychopathology and normal psychology proved to be keys to the most difficult Taoist texts and to abstruse Indian myths, and Kerényi has now supplied such a wealth of connections with Greek mythology that the cross-fertilization of the two branches of science can no longer be doubted. In the same way that Wilhelm aroused an interest in alchemy and made possible a true interpretation of this little understood philosophy, Kerényi's work has stimulated a large number of psychological researches, in particular the investigation and elucidation of one of the most important problems in psychotherapy, namely, the *phenomenon of the transference*.[2]

[1133] Recently an unexpected and most promising connection has been forged between complex psychology and physics, or to be more accurate, *microphysics*. On the psychological side, it was first of all C. A. Meier who pointed out the common conception of complementarity. Pascual

Jordan approached psychology from the physicist's side by drawing attention to the phenomenon of spatial relativity which applies equally to the phenomena of the unconscious. W. Pauli has taken up the new "psychophysical" problem on a much broader basis, examining it from the standpoint of the formation of scientific theories and their archetypal foundations.[3] Recently, in two impressive lectures, he showed on the one hand how the archetypal triad or trinity formed the point of departure for Kepler's astronomy, and on the other how Fludd's polemics with Kepler were based on the alchemical thesis of the quaternity. The object at issue, the *proportio sesquitertia* or ratio of 3 : 1, is likewise a fundamental problem in the psychology of the unconscious. Thirty years ago, the problem first presented itself in psychology as a typological phenomenon, i.e., as the relation of three more or less differentiated functions to one inferior function which was contaminated with the unconscious. Since then it has been considerably widened and deepened by the study of Gnostic and alchemical texts. It appears there partly in the form of the social or folkloristic *marriage quaternio,* derived originally from the primitive cross-cousin-marriage, and partly in the form of a differentiation in the sequence of elements, in which one or the other element, usually fire or earth, is distinguished from the other three. The same problem appears in the controversy between the trinitarian and the quaternarian standpoint in alchemy. In complex psychology the quaternity symbol has been shown to be an expression of psychic totality, and in the same way it could be established that the *proportio sesquitertia* commonly occurs in the symbolism produced by the unconscious. If, as conjectured, the quaternity or above-named proportion is not only fundamental to all concepts of totality but is also inherent in the nature of observed microphysical processes, we are driven to the conclusion that the space-time continuum, including mass, is psychically relative—in other words, that it forms a unity with the unconscious psyche. Accordingly, there must be phenomena which can be explained only in terms of a psychic relativity of space, time, and mass. Besides numerous individual observations the experiments conducted at Duke University by Rhine and elsewhere by other investigators have furnished sufficient proof of this. You will forgive me if I have dwelt on the latest connections of our psychology with physics at some length. It did not seem to me superfluous in view of the incalculable importance of this question.

[1134] To round out the position of complex psychology as it is at present, I would like to mention some major works by pupils. These include the "Einführung in die Grundlagen der komplexen Psychologie," by Toni Wolff,[4] a work distinguished for its philosophical clarity; the books of Esther Harding on feminine psychology;[5] the analysis of the *Hypnerotomachia* of Francesco Colonna, by Linda Fierz-David,[6] a showpiece of medieval psychology; the valuable introduction to our psychology by Jolande Jacobi:[7] the books on child psychology by Frances Wickes,[8] notable for their interesting material; the great book by H. G. Baynes, *Mythology of the Soul*;[9] a synoptic study by Gerhard Adler;[10] a large-scale work in several volumes by Hedwig von Roques and Marie-Louise von Franz;[11] and finally, a work of significant content and scope on the evolution of consciousness by Erich Neumann.[12]

[1135] Of particular interest are the repercussions of complex psychology in the psychology of religion. The authors here are not my personal pupils. I would draw attention to the excellent book by Hans Schaer[13] on the Protestant side, and to the writings of W. P. Witcutt[14] and Father Victor White[15] concerning the relations of our psychology to Thomist philosophy, and finally to the excellent account of the basic concepts by Gebhard Frei,[16] whose unusual erudition facilitates an understanding from all sides.

[1136] To the picture of the past and present I must now try to sketch out one for the future. This can naturally take the form only of programmatic hints.

[1137] The manifold possibilities for the further development of complex psychology correspond to the various developmental stages it has already passed through. So far as the experimental aspect is concerned, there are still numerous questions which need to be worked out by experimental and statistical methods. I have had to leave many beginnings unfinished because of more pressing tasks that claimed my time and energies. The potentialities of the association experiment are by no means exhausted yet. For instance, the question of the periodic renewal of the emotional tone of complex-stimulators is still unanswered; the problem of familial patterns of association has remained stuck in its beginnings, promising though these were; and so has the investigation of the physiological concomitants of the complex.

[1138] In the medical and clinical field there is a dearth of fully elaborated case histories. This is understandable, because the enormous complexity of the material puts almost insurmountable difficulties in the way of exposition and makes the highest demands not only on the knowledge and therapeutic skill of the investigator but also on his descriptive capacity. In the field of psychiatry, analyses of paranoid patients coupled with research into comparative symbolism would be of the utmost value. Special consideration might be given to the collection and evaluation of dreams in early childhood and pre-catastrophal dreams, i.e., dreams occurring before accidents, illness, and death, as well as dreams during severe illnesses and under narcosis. The investigation of pre- and post-mortal psychic phenomena also comes into this category. These are particularly important because of the relativation of space and time that accompanies them. A difficult but interesting task would be research into the processes of compensation in psychotics and in criminals, and in general into the goal of compensation and the nature of its directedness.

[1139] In normal psychology, the most important subjects for research would be the psychic structure of the family in relation to heredity, the compensatory character of marriage and of emotional relationships in general. A particularly pressing problem is the behaviour of the individual in the mass and the unconscious compensation to which this gives rise.

[1140] A rich harvest is to be reaped in the field of the humanities. Here a tremendous prospect opens out, and at present we are standing only on its extreme periphery. Most of it is still virgin territory. The same applies to biographical studies, which are especially important for the history of literature. But above all, analytical work remains to be done on questions concerned with the psychology of religion. The study of religious myths would throw light not only on racial psychology but also on certain borderline problems such as the one I mentioned earlier. In this respect, particular attention would have to be paid to the quaternity symbol and the *proportio sesquitertia*, as exemplified in the alchemical axiom of Maria, both from the side of the psychologist and from that of the physicist. The physicist may have to consider revising his concept of space-time, and for the psychologist there is need of a more thorough investigation and description of triadic and tetradic symbols and their historical development, to which Frobenius has contributed valuable material. Comprehensive studies are also needed of symbols of the goal or of unity.

[1141] This list, put together more or less at random, makes no claim to completeness. What I have said may suffice to give you a rough idea of what has already been achieved in complex psychology and of the direction which future researches conducted by the Institute might be expected to take. Much will remain a mere desideratum. Not all of it will be fulfilled; the individual differences of our workers on the one hand, and the irrationality and unpredictability of all scientific development on the other, will see to that. Happily, it is the prerogative of any institution with limited means, and not run by the State, to produce work of high quality in order to survive.

DEPTH PSYCHOLOGY[1]

[1142] “Depth psychology” is a term deriving from medical psychology, coined by Eugen Bleuler to denote that branch of psychological science which is concerned with the phenomenon of the unconscious.

[1143] As a philosophical and metaphysical concept, the unconscious occurs fairly early, for instance as “petites perceptions” in Leibniz,[2] “eternal unconscious” in Schelling, “unconscious Will” in Schopenhauer, and as the “divine Absolute” in von Hartmann.

[1144] In the academic psychology of the nineteenth century, the unconscious occurs as a basic theoretical concept in Theodor Lipps, who defines it as the “psychic reality which must necessarily be thought to underlie the existence of a conscious content”; and in F. H.W. Myers and William James, who stress the importance of an unconscious psyche. With Theodor Fechner, the unconscious becomes an empirical concept. Nevertheless, the empirical approach to the unconscious may properly be said to date from quite recent times, since up to the turn of the century the psyche was usually identified with consciousness, and this made the idea of the unconscious appear untenable (Wundt).

[1145] The real pioneers of experimental research into the unconscious were Pierre Janet and Sigmund Freud, two medical psychologists whose investigations of pathological psychic life laid the foundations of the modern science of the unconscious. Great credit is due to Janet for his investigation of hysterical states, which he developed in his theory of “partial psychic dissociation,” drawing a distinction between the “partie supérieure” and “partie inférieure” of a function. Equally fruitful was his experimental proof of “idées fixes” and “obsessions,” and of their autonomous effects upon consciousness.

[1146] The prominence given to the unconscious as a fundamental concept of empirical psychology, however, goes back to Freud, the true founder of the depth psychology which bears the name of psychoanalysis. This is a special method of treating psychic illnesses, and consists essentially in uncovering what is “hidden, forgotten, and repressed” in psychic life. Freud was a nerve specialist. His theory was evolved in the consulting room and always preserved its stamp. His fundamental premise was the pathological, neurotically degenerate psyche.

[1147] The development of Freud’s thought can be traced as follows. He began by investigating neurotic symptoms, more particularly hysterical symptom-formation, whose psychic origin Breuer, employing a method borrowed from hypnotism, had previously discovered in the existence of a causal connection between the symptoms and certain experiences of which the patient was unconscious. In these experiences Freud recognized affects which had somehow got “blocked,” and from which the patient had to be freed. He found there was a meaningful connection between the symptom and the affective experience, so much so that conscious experiences which later became unconscious were essential components of neurotic symptoms. The affects remained unconscious because of their painful nature. In consequence, Freud made no further use of hypnosis in “abreacting” the blocked affects, but developed instead his technique of “free association” for bringing the repressed processes back to consciousness. He thus laid the foundations of a causal-reductive method, of which special use was to be made in his interpretation of dreams.

[1148] In order to explain the origin of hysteria, Freud established the theory of the sexual trauma. He found that traumatic experiences were especially painful because most of them were caused by instinctual impulses coming from the sexual sphere. He assumed to begin with that hysteria in general was due to a sexual trauma in childhood. Later he stressed the aetiological significance of infantile-sexual fantasies that proved to be incompatible with the moral values of consciousness and were therefore repressed. The theory of repression forms the core of Freud’s teaching. According to this theory, the unconscious is essentially a phenomenon of repression, and its contents are elements of the personal psyche that although once conscious are now lost to consciousness. The unconscious would thus owe its existence to a moral conflict.

[1149] The existence of these unconscious factors can be demonstrated, as Freud showed, with the help of parapraxes (slips of the tongue, forgetting, misreading) and above all with the help of dreams, which are an important source of information regarding unconscious contents. It is Freud’s particular merit to have made dreams once more a problem for psychologists and to have attempted a new method of interpretation. He explained them by means of the repression theory, and maintained that they consisted of morally incompatible elements which, though capable of becoming conscious, were suppressed by an unconscious moral factor, the “censor,” and could therefore appear only in the form of disguised wish-fulfillments.

[1150] The instinctual conflict underlying this phenomenon Freud described initially as the conflict between the pleasure principle and the reality principle, the latter playing the part of an inhibiting factor. Later he described it as the conflict between the sexual instinct and the ego-instinct (or between the life-instinct and the death-instinct). The obtaining of pleasure was correlated with the pleasure principle, and the culture-creating impulse with the reality principle. Culture required the sacrifice of instinctual gratification by the whole of mankind and the individual alike. Resistance to this sacrifice led to secret wish-fulfillments distorted by the “censor.” The danger inherent in this theory was that it made culture appear a substitute for unsatisfied natural instincts, so that complex psychic phenomena like art, philosophy, and religion became “suspect,” as though they were “nothing but” the outcome of sexual repression. It would seem that Freud’s negative and reductive attitude towards cultural values was historically conditioned. His attitude towards myth and religion was that of the scientific materialism of the nineteenth century. As his psychology was mainly concerned with the neuroses, the pathological aspect of the transformation of instinct claims a disproportionately large place in his theory of the unconscious and of the neuroses themselves. The unconscious appears to be essentially an appendix of consciousness; its contents are repressed wishes, affects, and memories that owe their pathogenic significance to infantile sexuality. The most important of the repressed contents is the so-called Oedipus complex, which represents the fixation of infantile sexual wishes on the mother and the resistance to the father arising from feelings of envy and fear. This complex forms the core of a neurosis.

[1151] The question of the dynamics of unconscious fantasy-formations led Freud to a concept of great importance for the further development of depth psychology, namely, the concept of libido. At first he regarded this as the sexual instinct, but later broadened it by assuming the existence of "libidinal affluxes" due to the displacement and dissociability of the libido. Through the investigation of libido-fixations Freud discovered the "transference," a fundamental phenomenon in the treatment of neurosis. Instead of recollecting the repressed elements, the patient "transfers" them to the analyst in the form of some current experience; that is, he projects them and thereby involves the analyst in his "family romance." In this way his illness is converted into the "transference neurosis" and is then acted out between them.

[1152] Freud later expanded the concept of the unconscious by calling it the "id" in contradistinction to the conscious ego. (The term derives from Groddeck.) The id represents the natural unconscious dynamism of man, while the ego forms that part of the id which is modified under the influence of the environment or is replaced by the reality principle. In working out the relations between the ego and the id, Freud discovered that the ego contains not only conscious but also unconscious contents, and he was therefore compelled to frame a concept to characterize the unconscious portion of the ego, which he called the "super-ego" or "ego-ideal." He regarded this as the representative of the parental authority, as the successor of the Oedipus complex, that impels the ego to restrain the id. It manifests itself as conscience, which, invested with the authority of collective morality, continues to display the character of the father. The super-ego accounts for the activity of the censor in dreams.

[1153] Although Alfred Adler is usually included among the founders of depth psychology, his school of *individual psychology* represents only a partial continuation of the line of research initiated by his teacher Freud. Confronted with the same empirical material, Adler considered it from an entirely different point of view. For him, the primary aetiological factor was not sexuality but the power-drive. The neurotic individual appeared to him to be in conflict with society, with the result that his spontaneous development was blocked. On this view the individual never exists for himself alone; he maintains his psychic existence only within the community. In contrast to the emphasis Freud laid on instinctual strivings, Adler stressed the importance of environmental factors as possible causes of neurosis. Neurotic symptoms and disturbances of personality were the result of a morbidly intensified valuation of the ego, which, instead of adapting to reality, develops a system of "guiding fictions." This hypothesis gives expression to a finalistic viewpoint diametrically opposed to the causal-reductive method of Freud, in that it emphasizes the direction towards a goal. Each individual chooses a guiding line as a basic pattern for the organization of all psychic contents. Among the possible guiding fictions, Adler attached special importance to the winning of superiority and power over others, the urge "to be on top." The original source of this misguided ambition lies in a deep-rooted feeling of inferiority, necessitating an over-compensation in the form of security. A primary organ-inferiority, or inferiority of the constitution as a whole, often proves to be an aetiological factor. Environmental influences in early childhood play their part in building up this psychic mechanism, since it is then that the foundations are laid for the development of the guiding fiction. The fiction of future superiority is maintained by tendentiously distorting all valuations and giving undue importance to being "on top" as opposed to "underneath," "masculine" as opposed to "feminine," a tendency which finds its clearest expression in the so-called "masculine protest."

[1154] In Adler's individual psychology, Freud's basic concepts undergo a process of recasting. The Oedipus complex, for example, loses its importance in view of the increasing drive for security; illness becomes a neurotic "arrangement" for the purpose of consolidating the life-plan. Repression loses its aetiological significance when understood as an instrument for the better realization of the guiding fiction. Even the unconscious appears as an "artifice of the psyche," so that it may very well be asked whether Adler can be included among the founders of depth psychology. Dreams, too, he regarded as distortions aiming at the fictive security of the ego and the strengthening of the power drive. Nevertheless, the services rendered by Adler and his school to the phenomenology of personality disturbances in children should not be overlooked. Above all, it must be emphasized that a whole class of neuroses can in fact be explained primarily in terms of the power drive.

[1155] Whereas Freud started out as a neurologist, and Adler later became his pupil, C. G. Jung was a pupil of Eugen Bleuler and began his career as a psychiatrist. Before he came into contact with Freud's ideas, he had, in treating a case of somnambulism in a fifteen-year-old girl (1899), observed that her unconscious contained the beginnings of a future personality development, which took the form of a split (or "double") personality. Through experimental researches on association (1903) he found that in normal individuals as well as in neurotics the reactions to word-tests were disturbed by split-off ("repressed") emotional *complexes* ("feeling-toned complexes of ideas"), which manifested themselves by means of definite symptoms ("complex-indicators"). These experiments confirmed the existence of the repressions described by Freud and their characteristic consequences. In 1906 Jung gave polemical support to Freud's discovery. The theory of complexes maintains that neurosis is caused by the splitting-off of a vitally important complex. Similar splinter-complexes can be observed in schizophrenia. In this disease the personality is, as it were, broken up into its complexes, with the result that the normal ego-complex almost disappears. The splinter-complexes are relatively autonomous, are not subject to the conscious will, and cannot be corrected so long as they remain unconscious. They lend themselves to personification (in dreams, for instance), and, with increasing dissociation and autonomy, assume the character of partial personalities (hence the old view of neuroses and psychoses as states of possession).

[1156] In 1907 Jung became personally acquainted with Freud, and derived from him a wealth of insights, particularly in regard to dream psychology and the treatment of neurosis. But in certain respects he arrived at views which differed from those of Freud. Experience did not seem to him to justify Freud's sexual theory of neurosis, and still less that of schizophrenia. The conception of the unconscious needed to be broadened, inasmuch as the unconscious was not just a product of repression but was the creative matrix of consciousness. Equally, he was of the opinion that the unconscious could not be explained in personalistic terms, as a merely personal phenomenon, but that it was also in part collective. Accordingly, he rejected the view that it possessed a merely instinctual nature, as well as rejecting the wish-fulfillment theory of dreams. Instead, he emphasized the compensatory function of the unconscious processes and their teleological character. For the wish-fulfillment theory he substituted the concept of development of personality and development of consciousness, holding that the unconscious does not consist only of morally incompatible wishes but is largely composed of hitherto undeveloped, unconscious portions of the personality which strive for integration in the wholeness of the individual. In the neurotic, this process of realization is manifested in the conflict between the relatively mature side of the personality and the side which Freud rightly described as infantile. The conflict has at first a purely personal character and can be explained personalistically, as the patients themselves do, and moreover in a manner which agrees both in principle and in detail with the Freudian explanation. Their standpoint is a purely personal and egoistic one, and takes no account of the collective factors, this being the very reason why they are ill. In schizophrenics, on the other hand, the collective contents of the unconscious predominate strongly in the form of mythological motifs. Freud could not subscribe to these modifications of his views, so Jung and he parted company.

[1157] Such differences of viewpoint, further increased by the contradiction between Freud’s and Adler’s explanation of neurosis, prompted Jung to investigate more closely the important question of the conscious attitude, on which the compensatory function of the unconscious depends. Already in his association experiments he had found indications of an *attitude-type,* and this was now confirmed by clinical observations. As a general and habitual disposition in every individual, there proved to be a more or less pronounced tendency towards either *extraversion* or *introversion*, the focus of interest falling in the first case on the object, and in the second on the subject. These attitudes of consciousness determine the corresponding modes of compensation by the unconscious: the emergence in the first case of unconscious demands upon the subject, and in the second of unconscious ties to the object. These relationships, in part complementary, in part compensatory, are complicated by the simultaneous participation of the variously differentiated *orienting functions* of consciousness, namely, *thinking, feeling, sensation,* and *intuition,* which are needed for a whole judgment. The most differentiated (“superior”) function is complemented or compensated by the least differentiated (“inferior”) function, but at first only in the form of a conflict.

[1158] Further investigation of the collective material of the unconscious, presented by schizophrenics and by the dreams of neurotics and normal people, elicited typical figures or motifs which have their counterparts in myth and may therefore be called *archetypes*. These are not to be thought of as inherited ideas; rather, they are the equivalent of the “pattern of behaviour” in biology. The archetype represents a mode of psychic behaviour. As such, it is an “irrepresentable” factor which unconsciously arranges the psychic elements so that they fall into typical configurations, much as a crystalline grid arranges the molecules in a saturated solution. The specific associations and memory images forming these configurations vary endlessly from individual to individual; only the basic pattern remains the same. One of the clearest of these archetypal figures is the *anima,* the personification of the unconscious in feminine form. This archetype is peculiar to masculine psychology, since the unconscious of a man is by nature feminine, probably owing to the fact that sex is determined merely by a preponderance of masculine genes, the feminine genes retreating into the background. The corresponding role in a woman is played by the *animus*. A figure common to both sexes is the *shadow,* a personification of the inferior side of the personality. These three figures appear very frequently in the dreams and fantasies of normal people, neurotics and schizophrenics. Less frequent is the archetype of the *wise old man* and of the *earth mother*. Besides these there are a number of functional and situational motifs, such as ascent and descent, the crossing (ford or strait), tension and suspension between opposites, the world of darkness, the breakthrough (or invasion), the creation of fire, helpful or dangerous animals, etc. Most important of all is the supposedly central archetype or *self,* which seems to be the point of reference for the unconscious psyche, just as the ego is the point of reference for consciousness. The symbolism associated with this archetype expresses itself on the one hand in circular, spherical, and quaternary forms, in the "squaring of the circle," and in mandala symbolism; on the other hand in the imagery of the supraordinate personality (God-image, Anthropos symbolism).

[1159] These empirical findings show that the unconscious consists of two layers: a superficial layer, representing the *personal unconscious*, and a deeper layer, representing the *collective unconscious*. The former is made up of personal contents, i.e., things forgotten and repressed, subliminal or "extrasensory" perceptions and anticipations of future developments, as well as other psychic processes that never reach the threshold of consciousness. A neurosis originates in a conflict between consciousness and the personal unconscious, whereas a psychosis has deeper roots and consists in a conflict involving the collective unconscious. The great majority of dreams contain mainly personal material, and their protagonists are the ego and the shadow. Normally, the dream material serves only to compensate the conscious attitude. There are, however, comparatively rare dreams (the "big" dreams of primitives) which contain clearly recognizable mythological motifs. Dreams of this sort are of especial importance for the development of personality. Their psychotherapeutic value was recognized even in ancient times.

[1160] Since the personal unconscious contains the still active residues of the past as well as the seeds of the future, it exerts a direct and very considerable influence on the conscious behaviour of the individual. All cases of unusual behaviour in children should be investigated for their psychic antecedents through rigorous interrogation of both child and parents. The behaviour of the parents, whether they have open or hidden conflicts, etc., has an incalculable effect on the unconscious of the child. The causes of infantile neurosis are to be sought less in the children than in the parents or teachers. The teacher should be more conscious of his shadow than the average person, otherwise the work of one hand can easily be undone by the other. It is for this reason that medical psychotherapists are required to undergo a training analysis, in order to gain insight into their own unconscious psyche.

[1160a] Thanks to the parallelism between mythological motifs and the archetypes of the unconscious, depth psychology has been applied in widely differing fields of research, especially by students of mythology, folklore, comparative religion, and the psychology of primitives (Richard Wilhelm, Heinrich Zimmer, Karl Kerényi, Hugo Rahner, Erich Neumann), as was also the case with the Freudian school earlier (Karl Abraham, Otto Rank, Ernest Jones). As the archetypes have a "numinous" quality and underlie all religious and dogmatic ideas, depth psychology is also of importance for theology.

[1161] The activity of the collective unconscious manifests itself not only in compensatory effects in the lives of individuals, but also in the mutation of dominant ideas in the course of the centuries. This can be seen most clearly in religion, and, to a lesser extent, in the various philosophical, social, and political ideologies. It appears in most dangerous form in the sudden rise and spread of psychic epidemics, as for instance in the witch hunts in Germany at the end of the fourteenth century, or in the social and political utopias of the twentieth century. How far the collective unconcious may be considered the efficient cause of such movements, or merely their material cause, is a question for ethnologists and psychologists to decide; but certain experiences in the field of individual psychology indicate the possibility of a spontaneous activity of archetypes. These experiences usually concern individuals in the second half of life, when it not infrequently happens that drastic changes of outlook are thrust upon them by the unconscious as a result of some defect in their conscious attitude. While the activity of the personal unconscious is confined to compensatory changes in the personal sphere, the changes effected by the collective unconscious have a collective aspect: they alter our view of the world, and, like a contagion, infect our fellow men. (Hence the astonishing effects of certain psychopaths on society!)

[1162] The regulating influence of the collective unconscious can be seen at work in the psychic development of the individual, or *individuation process*. Its main phases are expressed by the classic archetypes that are found in the ancient initiation mysteries and in Hermetic philosophy. These archetypal figures appear in projected form during the transference. Freud recognized only the personal aspect of this psychotherapeutically very important phenomenon. Despite appearances to the contrary, its real psychotherapeutic value does not lie in the sphere of personal problems (a misunderstanding for which the neurotic patient has to pay dearly), but in the projection of archetypal figures (anima, animus, etc.). The archetypal relationships thus produced during the transference serve to compensate the unlimited exogamy of our culture by a realization of the unconscious endogamous tendency. The goal of the psychotherapeutic process, the self-regulation of the psyche by means of the natural drive towards individuation, is expressed by the above-mentioned mandala and Anthropos symbolism.

FOREWORD TO THE FIRST VOLUME OF STUDIES FROM THE C. G. JUNG INSTITUTE[1]

[1163] The works which the Institute proposes to publish in this series derive from many different spheres of knowledge. This is understandable since they are predominantly psychological in character. Psychology, of its very nature, is the intermediary between the disciplines, for the psyche is the mother of all the sciences and arts. Anyone who wishes to paint her portrait must mingle many colours on his palette. In order to do justice to its subject, psychology has to rely on any number of auxiliary sciences, on whose findings its own growth and prosperity depend. The psychologist gratefully acknowledges his borrowings from other sciences, though he has neither the intention nor the ambition to usurp their domains or to "know better." He has no wish to intrude into other fields but restricts himself to using their findings for his own purposes. Thus, for example, he will not use historical material in order to write history but rather to demonstrate the nature of the psyche—a concern which is foreign to the historian.

[1164] The forthcoming publications in this series will show the great diversity of psychological interests and needs. Recent developments in psychological research, in particular the psychology of the collective unconscious, have confronted us with problems which require the collaboration of other sciences. The facts and relationships unearthed by the analysis of the unconscious offer so many parallels to the phenomenology of myths, for example, that their psychological elucidation may also shed light on the mythological figures and their symbols. At all events, we must gratefully acknowledge the invaluable support psychology has received from students of myths and fairy-tales, as well as from comparative religion, even if they on their part have not yet learnt how to make use of its insights. The psychology of the unconscious is still a very young science which must first justify its existence before a critical public. This is the end which the publications of the Institute are designed to serve.

September 1948

FOREWORD TO FRIEDA FORDHAM: “INTRODUCTION TO JUNG’S PSYCHOLOGY”[1]

[1165] Mrs. Frieda Fordham has undertaken the by no means easy task of producing a readable résumé of all my various attempts at a better and more comprehensive understanding of the human psyche. As I cannot claim to have reached any definite theory explaining all or even the main part of the psyche’s complexities, my work consists of a series of different approaches, or one might call it a circumambulation of unknown factors. This makes it rather difficult to give a clear-cut and simple account of my ideas. Moreover, I always felt a particular responsibility not to overlook the fact that the psyche does not reveal itself only in the doctor’s consulting-room, but above all in the wide world, as well as in the depths of history. What the doctor observes of its manifestations is an infinitesimal part of the psychic world, and moreover often distorted by pathological conditions. I was always convinced that a fair picture of the psyche could be obtained only by a comparative method. But the great disadvantage of such a method is that one cannot avoid the accumulation of comparative material, with the result that the layman becomes bewildered and loses his tracks in the maze of parallels.

[1166] The author’s task would have been much simpler if she had been in possession of a neat theory for a *point de départ*, and of well-defined case material without digressions into the immense field of general psychology. The latter, however, seems to me to form the only safe basis and criterion for the evaluation of pathological phenomena, even as normal anatomy and physiology are an indispensable precondition for a study of their pathological aspects. Just as human anatomy has a long evolution behind it, the psychology of modern man depends upon its historical roots and can only be judged by its ethnological variants. My works offer innumerable possibilities of side-tracking the reader’s attention with considerations of this sort.

[1167] Under those somewhat trying conditions the author has nevertheless succeeded in extricating herself from all the opportunities to make misstatements. She has presented a fair and simple account of the main aspects of my psychological work. I am indebted to her for this admirable piece of work.

September 1952

FOREWORD TO MICHAEL FORDHAM: "NEW DEVELOPMENTS IN ANALYTICAL PSYCHOLOGY"[1]

[1168] It is not easy to write a foreword to a book consisting of a collection of essays, especially when each essay requires one to take up an attitude or stimulates the reader into discursive comments. But this is just what Dr. Fordham's papers do: every single one of them is so carefully thought out that the reader can hardly avoid holding a conversation with it. I do not mean in a polemical sense, but rather in the sense of affirmation and in the desire to carry the objective discussion a stage further and collaborate on the solution of the problems involved. Opportunities for such enjoyable dialogues are unfortunately rather rare, so that one feels it as a distinct loss when one has to forgo them. A foreword ought not to make remarks to the author and, so to speak, buttonhole him for a private conversation. It ought, rather, to convey to the reader something of the impressions which the writer of the foreword received when reading the manuscript. If I may be forgiven a somewhat frivolous expression, the foreword should be content with the role of an intellectual aperitif.

[1169] Thus I can confess myself grateful for the stimulation the book has brought me, and salute the author's collaboration in the field of psychotherapy and analytical psychology. For in this territory questions arise of a practical and theoretical kind, which are so difficult to answer that they will continue to exercise our minds for a long time to come. Above all I would like to draw attention to Dr. Fordham's discussion of the problem of synchronicity, first mooted by me and now dealt with by him in a masterly manner. I must rate his achievement all the higher because it demands not only understanding, but courage too, not to let oneself be prevented from going more deeply into this problem by the prejudices of our intellectual compeers. Also I must acknowledge that the author has in no wise succumbed to the very understandable temptation to underestimate the problem, to pass off one's own lack of comprehension as the stupidity of others, to, substitute other terms for the concepts I have proposed and to think that something new has been said. Here Dr. Fordham's feeling for essentials is confirmed in the finest way.

[1170] The paper on the transference merits attentive reading. Dr. Fordham guides his reader through the multifarious aspects of this "problem with horns"—to use an expression of Nietzche's—with circumspection, insight, and caution, as befits this in every respect delicate theme. The problem of the transference occupies a central position in the dialectical process of analytical psychology and therefore merits quite special interest. It makes the highest demands not only on the doctor's knowledge and skill but also on his moral responsibility. Here the truth of the old alchemical dictum is proved yet again: "ars totum requirit hominem" (the art requires the total man). The author takes full account of the overriding importance of this phenomenon and accordingly devotes to it a particularly attentive and careful exposition. The practising psychologist would be very wrong if he thought he could dismiss general considerations of this kind based on broader principles, and dispense with all deeper reflection. Even if psychotherapy admits of numerous provisional and superficial solutions in practice, the practising analyst will nevertheless come up against cases from time to time that challenge him as a man and a personality in a way that may be decisive. The usual interim solutions and other banal expedients, such as appeals to collective precepts, which are invariably constructed with "must" or "ought," then have a habit of breaking down, and the question of ultimate principles, or of the ultimate meaning of the individual, arises. This is the moment when dogmatic tenets and pragmatic rules of thumb must make way for a creative solution issuing from the total man, if his therapeutic endeavours are not to get miserably silted up and stuck. In such cases he will need reflection and will be thankful to those who have been farsighted enough to struggle for an all-round understanding.

[1171] For it is not only a routine performance that is expected of the analyst, but also a readiness and ability to master unusual situations. This is particularly true of psychotherapy, where in the last analysis we are concerned with the whole of the human personality and not merely with life in its partial aspects. Routine cases can be disposed of in a variety of ways—with good advice, with suggestion, with a bit of training, with confession of sin, with any more or less plausible system of views and methods. It is the uncommon cases that set us the master test, by forcing us into fundamental reflections and demanding decisions of principle. From this vantage point we shall then discover that even in ordinary cases there is adumbrated a line that leads to the central theme, namely, the individuation process with its problem of opposites.

[1172] This level of insight cannot be reached without the dialectical discussion between two individuals. Here the phenomenon of the transference forcibly brings about a dialogue that can only be continued if both patient and analyst acknowledge themselves as partners in a common process of approximation and differentiation. For, in so far as the patient frees himself from his infantile state of unconsciousness and its restrictive handicaps, or from its opposite, namely unbounded egocentricity, the analyst will see himself obliged to diminish the distance between them (hitherto necessary for reasons of professional authority), to a degree that does not prevent him from displaying that measure of humanity which the patient needs in order to assure himself of his right to exist as an individual. Just as it is the duty of parents and educators not to keep children on the infantile level but to lead them beyond it, so it is incumbent on the analyst not to treat patients as chronic invalids but to recognize them, in accordance with their spiritual development and insight, as more or less equal partners in the dialogue, with the same rights as himself. An authority that deems itself superior, or a personality that remains *hors concours*, only increases the patient's feelings of inferiority and of being excluded. An analyst who cannot risk his authority will be sure to lose it. In order to maintain his prestige he will be in danger of wrapping himself in the protective mantle of a doctrine. But life cannot be mastered with theories, and just as the cure of neurosis is not, ultimately, a mere question of therapeutic skill, but is a moral achievement, so too is the solution of problems thrown up by the transference. No theory can give us any information about the ultimate requirements of individuation, nor are there any recipes that can be applied in a routine manner. The treatment of the transference reveals in a pitiless light what the healing agent really is: it is the degree to which the analyst himself can cope with his own psychic problems. The higher levels of therapy involve his own reality and are the acid test of his superiority.

[1173] I hope Dr. Fordham’s book, which is distinguished for its farsightedness, carefulness, and clarity of style, will meet with the interest it so much deserves.

June 1957

AN ASTROLOGICAL EXPERIMENT[1]

[1174] In the Swiss edition[2] I purposely set out the results of the astrological statistics in tabular form in this chapter, so that the reader could gain some insight into the behaviour of the figures—in other words, see for himself how fortuitous these results were. Subsequently, I wanted to suppress that account of the experiment in the English edition and for a very peculiar reason indeed. That is, it has been forcibly borne in on me that practically nobody has understood it the right way, despite—or perhaps because—of the fact that I took the trouble to describe the experiment in great detail and in all its vicissitudes. Since it involved the use of statistics and comparative frequencies, I had the (as it now seems) unlucky idea that it would be helpful to present the resultant figures in tabular form. But evidently the suggestive effect emanating from statistical tables is so strong that nobody can rid himself of the notion that such an array of figures is somehow connected with the tendentious desire to *prove* something. Nothing could have been further from my mind, because all I intended to do was to describe a certain sequence of events in all its aspects. This altogether too unassuming intention was misunderstood all round, with the consequence that the meaning of the whole exposition went by the board.

[1175] I am not going to commit this mistake again, but shall make my point at once by anticipating the result: the experiment shows how synchronicity plays havoc with statistical material. Even the choice of my material seems to have thrown my readers into confusion, since it is concerned with *astrological* statistics. One can easily imagine how obnoxious such a choice must be to a prudish intellectualism. Astrology, we are told, is unscientific, absolute nonsense, and everything to do with it is branded as rank superstition. In such a dubious context, how could columns of figures mean anything except an attempt to furnish proofs in favour of astrology, proofs whose invalidity is a foregone conclusion? I have already said that there was never any question of that—but what can words do against numerical tables?

[1176] We hear so much of astrology nowadays that I determined to inquire a little more closely into the empirical foundations of this intuitive method. For this reason I picked on the following question: *How do the conjunctions and oppositions of the sun, moon, Mars, Venus, ascendant, and descendant behave in the horoscopes of married people?* The sum of all these aspects amount to fifty.

[1177] The material to be examined, namely, marriage horoscopes, was obtained from friendly donors in Zurich, London, Rome, and Vienna. The horoscopes, or rather the birth data, were piled up in chronological order just as the post brought them in. The misunderstanding already began here, as several astrological authorities informed me that my procedure was quite unsuited to evaluating the marriage relationship. I thank these amiable counsellors, but on my side there was never any intention of evaluating marriage astrologically but only of investigating the question raised above. As the material only trickled in very slowly I was unable to restrain my curiosity any longer, and I also wanted to test out the methods to be employed. I therefore took the 360 horoscopes (i.e., 180 pairs) that had so far accumulated and gave the material to my coworker, Dr. Liliane Frey-Rohn, to be analysed. I called these 180 pairs the “first batch.”

[1178] Examination of this batch showed that the conjunction of sun (masculine) and moon (feminine) was the most frequent of all the 50 aspects, occurring in 10% of all cases. The second batch, evaluated later, consisted of 440 additional horoscopes (220 pairs) and showed as the most frequent aspect a moon-moon conjunction (10.9%). A third batch, consisting of 166 horoscopes (83 pairs), showed as the most frequent aspect the ascendant-moon conjunction (9.6%).

[1179] What interested me most to begin with was, of course, the question of probability: were the maximum results obtained “significant” figures or not; that is, were they improbable or not? Calculations undertaken by a mathematician showed unmistakably that the average frequency of 10% in all three batches is far from representing a significant figure. Its probability is much too great; in other words, there is no ground for assuming that our maximum frequencies are more than mere dispersions due to chance. Thus far the result of our statistics (which nevertheless cover nearly one thousand horoscopes) is disappointing for astrology. The material is, however, much too scanty for us to be able to draw from it any conclusions either for or against.

[1180] But if we look at the results qualitatively, we are immediately struck by the fact that in all three batches it is a *moon conjunction*, and what is more—a point which the astrologer will doubtless appreciate—a conjunction of moon and sun, moon and moon, moon and ascendant, respectively. The sun indicates the month, the moon the day, and the ascendant the "moment" of birth. The positions of sun, moon, and ascendant form the three main pillars of the horoscope. It is altogether probable that a moon conjunction should occur once, but that it should occur three times is extremely improbable (the improbability increases by the square each time), and that it should single out precisely the three main positions of the horoscope from among 47 other possibilities is something supranormal and looks like the most gorgeous falsification in favour of astrology.

[1181] These results, as simple as they are unexpected, were consistently misunderstood by the statisticians. They thought I wanted to prove something with my set of figures, whereas I only wished to give an ocular demonstration of their "chance" nature. It is naturally a little unexpected that a set of figures, meaningless in themselves, should "arrange" a result which everybody agrees to be improbable. It seems in fact to be an instance of that possibility which Spencer-Brown has in mind when he says that "the results of the best-designed and most rigorously observed experiments in psychical research are chance results after all," and that "the concept of chance can cover a wider natural field than we previously suspected."[3] In other words what the previous statistical view obliged us to regard as "significant," that is, as a quasi-intentional grouping or arrangement, must be regarded equally as belonging to the realm of chance, which means nothing less than that the whole concept of probability must be revised. One can also interpret Spencer-Brown's view as meaning that under certain circumstances the quality of "pseudo-intention" attaches to chance, or—if we wish to avoid a negative formulation—that chance can "create" meaningful arrangements that look as if a causal intention had been at work. But that is precisely what I mean by "synchronicity," and what I wanted to demonstrate in the report on my astrological experiment. Naturally I did not embark on the experiment for the purpose of achieving, or in anticipation of, this unexpected result, which no one could have foreseen; I was only curious to find out what sort of numbers would turn up in an investigation of this kind. This wish seemed suspicious not only to certain astrologers but also to my friendly mathematical adviser, who saw fit to warn me against thinking that my maximal figures would be a proof of the astrological thesis. Neither before nor afterwards was there any thought of such proof, besides which my experiment was arranged in a way most unsuited to that purpose, as my astrological critics had already pointed out.

[1182] Since most people believe that numbers have been *invented* or thought out by man, and are therefore nothing but concepts of quantities, containing nothing that was not previously put into them by the human intellect, it was naturally very difficult for me to put my question in any other form. But it is equally possible that numbers were *found* or discovered. In that case they are not only concepts but something more—autonomous entities which somehow contain more than just quantities. Unlike concepts they are based not on any psychic assumption but on the quality of being themselves, on a "so-ness" that cannot be expressed by an intellectual concept. Under these circumstances they might easily be endowed with qualities that have still to be discovered. Also one could, as with all autonomous beings, raise the question of their behaviour; for instance one could ask what numbers do when they are intended to express something as archetypal as astrology. For astrology is the last remnant, now applied to the stars, of that fateful assemblage of gods whose numinosity can still be felt despite the critical procedures of our scientific age. In no previous age, however "superstitious," was astrology so widespread and so highly esteemed as it is today.

[1183] I must confess that I incline to the view that numbers were as much found as invented, and that in consequence they possess a relative autonomy analogous to that of the archetypes. They would then have, in common with the latter, the quality of being pre-existent to consciousness, and hence, on occasion, of conditioning it rather than being conditioned by it. The archetypes too, as *a priori* forms of representation, are as much found as invented: they are *discovered* inasmuch as one did not know of their unconscious autonomous existence, and *invented* by the mind inasmuch as their presence was inferred from analogous representational structures. Accordingly it would seem that natural numbers must possess an archetypal character. If that is so, then not only would certain numbers have a relation to and an effect on certain archetypes, but the reverse would also be true. The first case is equivalent to number magic, but the second is equivalent to my question whether numbers, in conjunction with the numinous assemblage of gods which the horoscope represents, would show a tendency to behave in a special way.

[1184] All reasonable people, especially mathematicians, are acutely concerned with the question of what we can do by means of numbers. Only a few devote any attention to the question of what, in so far as they are autonomous, numbers do in themselves. The question sounds so absurd that one hardly dares to utter it in decent intellectual society. I could not predict what result my scandalous statistics would show. I had to wait and see. And as a matter of fact my figures behaved in so obliging a fashion that an astrologer can probably appreciate them far better than a mathematician. Owing to their excessively strict adherence to reason, mathematicians seem unable to see beyond the fact that in each separate case my result has too great a probability to prove anything about astrology. Of course it doesn’t, because it was never intended to do any such thing, and I never for a moment believed that the maximum, falling each time on a moon conjunction, represented a so-called significant figure. Yet in spite of this critical attitude a number of mistakes were made in working out and computing the statistics, which all without exception contrived to bring about the most favourable possible result for astrology. As though to punish him for his well-meaning warning, the worst mistake of all fell to the lot of my mathematician, who at first calculated far too small a probability for the individual maxima, and was thus unwittingly deceived by the unconscious in the interests of astrological prestige.

[1185] Such lapses can easily be explained by a secret support for astrology in face of the violently prejudiced attitude of the conscious mind. But this explanation does not suffice in the case of the extremely significant overall result, which with the help of quite fortuitous numbers produced the picture of the classical marriage tradition in astrology, namely the conjunction of the moon with the three principal positions of the horoscope, when there were 47 other possibilities to choose from. Tradition since the time of Ptolemy predicts that the moon conjunction with the sun or moon of the partner is the marriage characteristic. Because of its position in the horoscope, the ascendant has just as much importance as the sun and moon. In view of this tradition one could not have wished for a better result. The figure giving the probability of this predicted concurrence, unlike the first-obtained maximum of 10%, is indeed highly significant and deserves emphasizing, although we are no more able to account for its occurrence and for its apparent meaningfulness than we can account for the results of Rhine's experiments, which prove the existence of a perception independent of the space-time barrier.

[1186] Naturally I do not think that this experiment or any other report on happenings of this kind proves anything; it merely points to something that even science can no longer overlook—namely, that its truths are in essence statistical and are therefore not absolute. Hence there is in nature a background of acausality, freedom, and meaningfulness which behaves complementarily to determinism, mechanism, and meaninglessness; and it is to be assumed that such phenomena are observable. Owing to their peculiar nature, however, they will hardly be prevailed upon to lay aside the chance character that makes them so questionable. If they did this they would no longer be what they are—acausal, undetermined, meaningful.[4]

[1187] [Pure causality is only meaningful when used for the creation and functioning of an efficient instrument or machine by an intelligence standing outside this process and independent of it. A self-running process that operates entirely by its own causality, i.e., by absolute necessity, is meaningless. One of my critics accuses me of having too rigid a conception of causality. He has obviously not considered that if cause and effect were not necessarily[5] connected there would hardly be any meaning in speaking of causality at all. My critic makes the same mistake as the famous scientist[6] who refuses to believe that God played dice when he created the world. He fails to see that if God did not play dice he had no choice but to create a (from the human point of view) meaningless machine. Since this question involves a transcendental judgment there can be no final answer to it, only a paradoxical one. *Meaning arises not from causality but from freedom, i.e., from acausality.*

[1188] [Modern physics has deprived causality of its axiomatic character. Thus, when we explain natural events we do so by means of an instrument which is not quite reliable. Hence an element of uncertainty always attaches to our judgment, because—theoretically, at least—we might always be dealing with an exception to the rule which can only be registered negatively by the statistical method. No matter how small this chance is, it nevertheless exists. Since causality is our only means of explanation and since it is only relatively valid, we explain the world by applying causality in a paradoxical way, both positively and negatively: A is the cause of B and possibly not. The negation can be omitted in the great majority of cases. But it is my contention that it cannot be omitted in the case of phenomena which are relatively independent of space and time. As the time-factor is indispensable to the concept of causality, one cannot speak of causality in a case where the time-factor is eliminated (as in precognition). *Statistical truth leaves a gap open for acausal phenomena*. And since our causalistic explanation of nature contains the possibility of its own negation, it belongs to the category of *transcendental judgments*, which are paradoxical or antinomian. That is so because nature is still beyond us and because science gives us only an average picture of the world, but not a true one. If human society consisted of average individuals only, it would be a sad sight indeed.]

[1189] From a rational point of view an experiment like the one I conducted is completely valueless, for the oftener it is repeated the more probable becomes its lack of results. But that this is also *not* so is proved by the very old tradition, which would hardly have come about had not these "lucky hits" often happened in the past. They behave like Rhine's results: they are exceedingly improbable, and yet they happen so persistently that they even compel us to criticize the foundations of our probability calculus, or at least its applicability to certain kinds of material.

[1190] When analysing unconscious processes I often had occasion to observe synchronistic or ESP phenomena, and I therefore turned my attention to the psychic conditions underlying them. I believe I have found that they nearly always occur in the region of archetypal constellations, that is, in situations which have either activated an archetype or were evoked by the autonomous activity of an archetype. It is these observations which led me to the idea of getting the combination of archetypes found in astrology to give a quantitatively measurable answer. In this I succeeded, as the result shows; indeed one could say that the organizing factor responded with enthusiasm to my prompting. The reader must pardon this anthropomorphism, which I know positively invites misinterpretation; it fits in excellently well with the psychological facts and aptly describes the emotional background from which synchronistic phenomena emerge.

[1191] I am aware that I ought at this point to discuss the psychology of the archetype, but this has been done so often and in such detail elsewhere[7] that I do not wish to repeat myself now.

[1192] I am also aware of the enormous impression of improbability made by events of this kind, and that their comparative rarity does not make them any more probable. The statistical method therefore excludes them, as they do not belong to the average run of events.

LETTERS ON SYNCHRONICITY

To Markus Fierz[1]

21 February 1950

Dear Professor Fierz,

[1193] You were kind enough to read through my MS on synchronicity, for which I have never thanked you sufficiently. I have been too engrossed in working out this idea.

[1194] Today I take the liberty of burdening you with yet another portion of this manuscript, my excuse being that I am in great perplexity as regards the mathematical evaluation of the results worked out. I enclose the Tables, together with the commentary. For your general orientation I would only remark that the peculiar nature of the material has necessitated a somewhat peculiar arrangement of the Tables. The basis of the experiment consists of 180 married pairs, whose horoscopes were compared for the frequency of the so-called classical marriage aspects, namely, the conjunction and opposition of sun and moon, Mars and Venus, ascendant and descendant. These yield 50 aspects. The results obtained for married pairs were compared with 180 × 180 − 1 = 32,220 combinations of unmarried pairs. To the original material of 180 married pairs another 145 were added later, which were also included in the statistics. They were examined in part separately, in part together with the 180, as you can see from the Tables.

[1195] The most interesting seems to me to be Table VI,[2] which shows the dispersions in the frequency values of the aspects. I would now be most grateful if you would give me your criticism and view of the Tables as a whole, and, in particular, answer a question arising out of Table VI. We have here some aspects which considerably exceed the probable mean value of the combinations. I would now like to know what is the probability of these deviations from the probable mean. I know that for this purpose a calculation is used which is based on the so-called "deviation standard."[3] But this method is beyond my mathematical capacity and here I am wholly dependent on your help. I would be very glad if you would concentrate mainly on this question. For outside reasons there is some urgency with these Tables, as the book is soon to go to press. Failing all else it would be enough for me if you could simply confirm that the Tables as a whole are in order, and if you could give me the probability at least for the two highest values in Table VI, column 1. All the rest, I devoutly hope, you will be able to see from the Tables themselves. After brooding on them for a long time they have become clear to me, and I must confess I would not know how to make them any clearer.

[1196] Should you be interested in the whole of the manuscript, or think it desirable to read it for the present purpose, it is naturally at your disposal. But I wouldn't like to send such an avalanche crashing down on you without warning.

Thanking you in advance for the trouble you are taking,

Yours sincerely, C. G. JUNG

2 March 1950

Dear Professor Fierz,

[1197] My best thanks for all the trouble you have taken. You have given me just what I hoped for from you—an objective opinion as to the significance of the statistical figures obtained from my material of now 400 marriages. Only I am amazed that my statistics have amply confirmed the traditional view that the sun-moon aspects are marriage characteristics, which is further underlined by the value you give for the moon-moon conjunction, namely 0.125%.

For myself I regard the result as very unsatisfactory and have therefore stopped collecting further material, as the approximation to the probable mean with increasing material seems to me suspicious.

[1198] Although the figure of 0.125% is still entirely within the bounds of possibility, I would nevertheless like to ask you, for the sake of clarity, whether one may regard this value as "significant" in so far as its represents a relatively low probability that coincides with the historical tradition? May one at least *conjecture* that it argues for rather than against the tradition (since Ptolemy)? I fully share your view of divinatory methods as *catalysts* of intuition. But the result of these statistics has made me somewhat sceptical, especially in connection with the latest ESP experiments which have obtained probabilities of 10^{-31}. These experiments and the whole experience of ESP are sufficient proof that meaningful coincidences do exist. There is thus some probability that the divinatory methods actually produce synchronistic phenomena. These seem to me most clearly discernible in astrology. The statistical findings undoubtedly show that the astrological correspondences are nothing more than chance. The statistical method is based on the assumption of a continuum of uniform objects. But synchronicity is a qualified individual event which is ruined by the statistical method; conversely, synchronicity abolishes the assumption of [a continuum of] uniform objects and so ruins the statistical method. It seems, therefore, that a *complementarity relationship* exists between synchronicity and causality. Rhine's statistics have proved the existence of synchronicity *in spite of unsuitable methods*. This aroused false hopes in me as regards astrology. In Rhine's experiments the phenomenon of synchronicity is an extremely simple matter. The situation in astrology is incomparably more complicated and is therefore more sensitive to the statistical method, which emphasizes just what is least characteristic of synchronicity, that is, uniformity. Now my results, mischievously enough, exactly confirm the old tradition although they are as much due to chance as were the results in the old days. So again something has happened that shows all the signs of synchronicity, namely a "meaningful coincidence" or "Just So" story. Obviously the ancients must have experienced the same thing quite by chance, otherwise no such tradition could ever have arisen. I don't believe any ancient astrologer statistically examined 800 horoscopes for marriage characteristics. He always had only small batches at his disposal, which did not ruin the synchronistic phenomenon and could therefore, as in my case, establish the prevalence of moon-moon and moon-sun conjunctions, although these are bound to diminish with a higher range of numbers. All synchronistic phenomena, which are more highly qualified than ESP, are as such unprovable, that is to say a single authenticated instance is sufficient proof in principle, just as one does not need to produce ten thousand duckbilled platypi in order to prove they exist. It seems to me synchronicity represents a *direct act of creation* which manifests itself as chance. The statistical proof of natural conformity to law is therefore only a very limited way of describing nature, since it grasps only uniform events. But nature is essentially discontinuous, i.e., subject to chance. To describe it we need a principle of discontinuity. In psychology this is the drive to individuation, in biology it is differentiation, but in nature it is the "meaningful coincidence," that is to say synchronicity.

[1199] Forgive me for putting forward these somewhat abstruse-looking reflections. They are new to me too and for that reason are still rather chaotic like everything *in statu nascendi.*

Thanks again for your trouble! I should be glad to have your impressions.

Best regards, C. G. JUNG

20 October 1954

Dear Professor Fierz,

[1200] Just now an English version of my book on synchronicity is being prepared. I would like to take this opportunity to make the necessary corrections for the probabilities of the maximal figures which you have so kindly calculated for me. My publishers now want to see the details of your calculation, as they don't understand what method you have employed. If it would be possible for you to let me have this report fairly soon I should be most grateful. Unfortunately I must still add a special request, namely the answer to the question: What is the probability of the total result that the 3 conjunctions, moon-sun, moon-moon, moon asc., all come out together?[4] This result (though consisting of chance figures) corresponds to the traditional astrological prediction and at least *imitates* that picture, and if it consisted of "significant figures" would prove the rightness of astrological expectations.

[1201] I hope I have succeeded in expressing myself clearly. I am indeed extremely sorry to bother you with this question and take up your valuable time. Perhaps you can assign the task to a student. Naturally in this matter I am helpless and am therefore quite prepared to recompense you or the student for the expenses involved. Please do not be offended at this practical suggestion.

Best thanks in advance!

Yours sincerely, C. G. JUNG

28 October 1954

Dear Professor Fierz,

[1202] Let me thank you most cordially for your kind and prompt fulfilment of my request. There is, of course no need for you to repeat your exposition; I will send it direct to Dr. Michael Fordham.

[1203] A misunderstanding seems to have arisen over my question about the moon-sun, moon-moon, moon-asc. triad:

1. The fact that my figures are due to chance was something I myself had noticed when putting my tables together. That is why I had the Tables printed in full; they express the chance nature of the figures quite clearly and so enable the non-mathematical reader to take it in at a glance. For the sake of accuracy I then asked you to give me the probability of my maxima. Your answer is more or less in line with what I expected. It was never my intention to prove that the astrological prediction is correct—I know the unreliability of astrology much too well for that. I only wanted to find out the exact degree of probability of my figures. You have already warned me twice about the impossibility of proving anything. That, if you will permit me to say so, is carrying coals to Newcastle. It doesn't matter to me at all whether astrology is right or not, but only (as said) what degree of probability those figures ("maxima") have, which *simulate* an apparent proof of the rightness of the astrological prediction.

2. The astrological prediction consists in the *traditional* assertion that my three moon conjunctions are specifically characteristic of marriage. (Sun, moon, asc. are the main pillars of the horoscope.) So this triad is not arbitrarily selected at all, for which reason I consider the analogy of the three white ants[5] entirely to the point. With all due respect, you seem to me to go very wide of the mark if you imagine that I regard

my results as other than statistically determined. Naturally they fall within the limits of mathematical probability, but that does not stop my maxima from occurring at the very places the astrologer would expect. The only thing that interests me is the degree of probability to be attributed to this coincidence, merely for the sake of accuracy! I don't want to *prove* anything with my figures but only to *show what has happened* and what I have done. *Quite by chance*, as I have tried to show with all possible clarity, a configuration resulted which, if it consisted of significant figures, would argue in favour of astrology. The whole story is in other words a case like the scarab[6] and simply shows what chance can do—a "Just So" story in fact! That such coincidences are in principle more than merely statistically determined is proved by Rhine's results, but not by an isolated instance like my statistics.

[1204] Naturally I speak in favour of chance in one respect, because I contest the absolute validity of statistical statements in so far as they dismiss all exceptions as unimportant. This gives us an abstract, average picture of reality which is to some extent a falsification of it, and this cannot remain a matter of indifference to the psychologist since he has to cope with the pathological consequences of this abstract substitute for reality.

[1205] The exception is actually more real than the average since it is the vehicle of reality *par excellence*, as you yourself point out in your letter of October 24th.

[1206] I am sorry to have caused you so much work, and that you now have to read this long letter as well. But I really do not know what could have led you to believe that I wanted to prove the truth of astrology. I only wanted to present a case of "meaningful coincidence" which would illustrate the main idea of my paper on synchronicity. This fact has been generally overlooked. In London they have called in a top statistician[7] to solve the riddle of my Tables. That is rather like a peasant not being able to open his barn door and then sending for an expert on safes, who naturally can't open it either. Regrettably, he too has succumbed to the error that I wanted to prove something in favour of astrology, although I disclaim this at some length in my book.

[1207] Unfortunately I am unable to understand how you can consider any other constellations (among my 50) just as “meaningful” as the three moon conjunctions. None of the others are “classical predictions.” Nor does just any ant appear, but only the “predicted” white ant. I am interested to know the probability of this meaningful occurrence precisely because it is not very probable that the white ant will be the first to come out of the box three times in succession. If the probability of a single time is 1:50, wouldn’t the probability of three times be $1{:}50^3$? A quite appreciable figure, it seems to me. This result may surely be taken as complying with my intention to present a case of synchronicity, even though it proves nothing about astrology, which was never my intention anyway.

Hoping that I have succeeded this time in clearing up the misunderstanding,

I remain with best thanks and cordial greetings,

Yours, C. G. JUNG

To Michael Fordham[8]

1st July 1955

Dear Fordham,

[1208] Synchronicity tells us something about the nature of what I call the *psychoid* factor, i.e., the unconscious archetype (not its conscious representation!). As the archetype has the tendency to gather suitable forms of expression round itself, its nature is best understood when one imitates and supports this tendency through amplification. The natural effect of an archetype and its amplification can be certainly understood as an analogy of the synchronistic effect, inasmuch as the latter shows the same tendency of arranging collateral and coincidental facts which represent suitable expressions of the underlying archetype. It is difficult or even impossible, however, to prove that amplificatory associations are *not causal*, whereas amplificatory facts coincide in a way that defies causal explanation. That is the reason why I call spontaneous and artificial amplification a mere analogy of synchronicity. It is true, however, that we cannot prove a causal connection in every case of amplification, and thus it is quite possible that in a number of cases, where we assume causal "association," it is really a matter of synchronicity. What is "association" after all? We don't know. It is not impossible that psychic arrangement in general is based upon synchronicity with the exception of the secondary rational "enchaînement" of psychic events in consciousness. This is analogous to the natural course of events, so different from our scientific and abstract reconstruction of reality based upon the statistical average. The latter produces a picture of nature consisting of mere probabilities, whereas reality is a crisscross of more or less impracticable events. Our psychic life shows the same phenomenological picture. This is the reason why I am rather inclined to think that it would be presumptuous to suppose the psyche is based exclusively upon the synchronistic principle, at least in our present state of knowledge.

[1209] I quite agree with your idea of the two complementary attitudes of understanding, viz., rational and irrational or synchronistic. But it remains to be seen whether all irrational events are *meaningful coincidences*. I doubt it.

[1210] It is refreshing to see you at work with these interesting problems and to hear something intelligent from you instead of the amazing stupidities dished out by our contemporaries.

[1211] I am sorry that I cannot come over to England to celebrate with you. I am writing in hospital, where I am nursing some prostatic trouble. Tomorrow I shall be dismissed for the time being. Old age is not exactly my idea of a joke.

My best wishes, Yours cordially, C. G. JUNG

[1212] P.S. As you are going to celebrate my 80th birthday in London and I am unfortunately unable to attend I thought it might be a nice gesture if you could send an invitation to the Swiss Ambassador to Great Britain. I am sure that he would appreciate at least your friendly gesture to one of his countrymen.

THE FUTURE OF PARAPSYCHOLOGY

The *International Journal of Parapsychology* (New York), in its 1963 autumn issue (V:4, pp. 450f.), published Jung's answers to a questionnaire which had been circulated in June 1960 among various authorities in connection with a survey on "The Future of Parapsychology."

How do you define parapsychology?

[1213] Parapsychology is the science dealing with those biological or psychological events which show that the categories of matter, space, and time (and thus of causality) are not axiomatic.

Which areas of research, in your opinion, should be classified as belonging within parapsychology?

[1214] The psychology of the unconscious.

Do you anticipate that future research would emphasize quantitative or qualitative work?

[1215] Future research will have to emphasize both.

Do you believe that a repeatable *experiment is essential to strengthen the position of parapsychological studies within the scientific community?*

[1216] The repeatable experiment is desirable but, inasmuch as most of the events are spontaneous and irregular, the experimental method will not be generally applicable.

Have you any comments on recent criticisms with regard to statistical methods employed in parapsychological studies?

[1217] The statistical method is most desirable and indispensable to scientific research, where and when it can be applied. But this is only possible when the material shows a certain regularity and comparability.

Do you believe that certain qualitative researches may be quantified in order to gain wider acceptance?

[1218] The quantification of qualitative research is surely the best means of conviction.

In the qualitative area, where do you foresee the greatest potential for future research progress—spontaneous phenomena, crisis telepathy, survival studies, out-of-the-body experiences, or any other?

[1219] The greatest and most important part of parapsychological research will be the careful exploration and qualitative description of spontaneous events.

Do you feel that during the past decade parapsychology has become more widely accepted among scientists active in other areas?

[1220] My impression is that, in Europe, at least, open-mindedness has increased.

Have you any comments regarding the psychological significance of certain psychic phenomena?

[1221] The psychological significance of parapsychological events has hardly been explored yet.

Have you any comments regarding the special psychological conditions that seem to favour, or reduce, the likelihood of an occurrence of psychic phenomena?

[1222] The factor which favours the occurrence of parapsychological events is the presence of an active archetype, i.e., a situation in which the deeper, instinctual layers of the psyche are called into action. The archetype is a borderline phenomenon, characterized by a relativation of space and time, as already pointed out by Albertus Magnus (*De mirabilibus mundi*),[1] whom I have mentioned in my paper “Synchronicity: An Acausal Connecting Principle.”

THE ARCHETYPES AND THE COLLECTIVE UNCONSCIOUS

(related to Volume 9 of the Collected Works)

THE HYPOTHESIS OF THE COLLECTIVE UNCONSCIOUS[1]

[1223] Indications of the concept of a collective psyche are to be found in Leibniz's theory of "petites perceptions," also in Kant's anthropology. In Schelling the "eternally unconscious" is the absolute ground of consciousness. Despite different terminology Hegel's view is similar. C. G. Carus was the first to base a developed philosophical system on the concept of the unconscious. Related features may be found in Schopenhauer. Eduard von Hartmann exalted the unconscious to the concept of an absolute, universal Spirit. The scientific investigation of the psychological unconscious began with the discovery of hypnotism and was continued via the Salpétrière school in the works of Janet and Flournoy. Independently of this, it was the Breuer-Freud discovery of the aetiology of neurosis that led to Freud's sexual theory of the unconscious. Independent, again, of the Freudian school was the discovery of the so-called "complexes" and "autonomous contents" of the unconscious by the author.

[1224] Whereas for Freud the unconscious is essentially a function of consciousness, the author holds the unconscious to be an independent psychic function prior to consciousness and opposed to it. According to this view the unconscious may be divided into a *personal* and a *collective* unconscious. The latter is a psychic propensity to a regular functioning, independent of time and race. Its products may be compared with "mythological motifs." Despite the autochthonous origin of the former, the two are analogous in principle, which may be taken as an indication of their conforming to psychological law.

[1225] In the further course of the lecture the author, with the help of a special department of symbology, the so-called mandala symbolism, demonstrated the parallelism between the symbol of the circle, as produced by educated patients undergoing treatment, and the ritual mandalas of lamaism and *kundalini* yoga, as well as the parallels with the views of the Tantrists, of classical Chinese philosophy, and Chinese yoga.

Further parallels are children’s drawings, the prehistoric mandalas of Rhodesia, the sand-paintings from the healing ceremonies (*yaibichy* dances) of the Navaho (Arizona),[2] the visions of Hildegard of Bingen from the Codex Lucca[3] (12th to 13th cent.), and the eschatological views of Jacob Boehme.[4] The modern pictorial material was derived from people who produced it spontaneously and were not in any way influenced.

FOREWORD TO ADLER: “ENTDECKUNG DER SEELE”[1]

[1226] This book is a systematic account of the three different approaches now current in psychotherapy: Freud’s, Alfred Adler’s, and my own. Drawing on his wide professional knowledge, the author has carefully elaborated the principal viewpoints underlying each approach, and thus gives the reader, who may have neither the time nor the opportunity to study the originals, a complete and rigorously objective survey of this controversial field. The exposition and manner of expression are such that the educated layman can follow the argument without difficulty.

[1227] Psychological theories, which at the outset seemed destined for use only in the strictly delimited domain of medical psychotherapy, have long since burst the bounds of a specialized science, and have not only penetrated into the provinces of its sister sciences but become—even if fragmentary—the common property of all educated persons. This means, however, that informed public opinion has been infected with the same confusion which still prevails today in medical psychology. What distinguishes Dr. Adler’s work in particular is his thoroughly reliable and comprehensive account of my own views, which differ in so radical and characteristic a way from those of the other two investigators. His book, sober, lucid, and systematic, is a worthy companion to the earlier works by Kranefeldt[2] and Heyer.[3] It is a milestone in the slow but sure conquest of the crises and confusions that hang over the psychological views of our day.

December 1933

FOREWORD TO HARDING: "WOMAN'S MYSTERIES"[1]

[1228] Esther Harding, the author of this book, is a physician and specialist in the treatment of psychogenic illness. She is a former pupil of mine who has endeavoured not only to understand the modern psyche but also, as the present book shows, to explore its historical background. Preoccupation with historical subjects may at first glance seem to be merely a physician's personal hobby, but to the psychotherapist it is a necessary part of his mental equipment. The psychology of primitives, folklore, mythology, and the science of comparative religion open our eyes to the wide horizons of the human psyche and give us that indispensable aid we so urgently need for an understanding of unconscious processes. Only when we see in what shape and what guise dream symbols, which seem to us unique, appear on the historical and ethnic scene, can we really understand what they are pointing at. Also, once equipped with this extensive comparative material, we can comprehend more nearly that factor which is so decisive for psychic life, the archetype. Of course this term is not meant to denote an inherited idea, but rather an inherited mode of psychic functioning, corresponding to the inborn way in which the chick emerges from the egg, the bird builds its nest, a certain kind of wasp stings the motor ganglion of the caterpillar, and eels find their way to the Bermudas. In other words, it is a "pattern of behaviour." This aspect of the archetype, the purely biological one, is the proper concern of scientific psychology.

[1229] But the picture changes at once when looked at from the inside, from within the realm of the subjective psyche. Here the archetype appears as a numinous factor, as an experience of fundamental significance. Whenever it clothes itself in suitable symbols (which is not always the case), it seizes hold of the individual in a startling way, creating a condition amounting almost to possession, the consequences of which may be incalculable. It is for this reason that the archetype is so important in the psychology of religion. All religious and metaphysical concepts rest upon archetypal foundations, and, to the extent that we are able to explore them, we can cast at least a superficial glance behind the scenes of world history, and lift a little the veil of mystery which hides the meaning of metaphysical ideas. Metaphysics is, as it were, a physics or physiology of the archetypes, and its dogmas formulate the insights that have been gained into the nature of these dominants—the unconscious leitmotifs that characterize the psychic happenings of a given epoch. The archetype is “metaphysical” because it transcends consciousness.

[1230] Dr. Harding’s book is an attempt to describe some of the archetypal foundations of feminine psychology. In order to understand the author’s intention, the reader must overcome the prejudice that psychology consists merely of what Mr. Smith and Mrs. Jones happen to know about it. The psyche consists not only of the contents of consciousness, which derive from sensory impressions, but also of ideas apparently based on perceptions which have been modified in a peculiar way by preexistent and unconscious formative factors, i.e., by the archetypes. The psyche can therefore be said to consist of consciousness plus the unconscious. This leads us to conclude that one part of the psyche is explicable in terms of recent causes, but that another part reaches back into the deepest layers of our racial history.

[1231] Now the one certain fact about the nature of neurosis is that it is due to a disturbance of the primary instincts, or at least affects the instincts to a considerable degree. The evolution of human anatomy and of human instincts extends over geological periods of time. Our historical knowledge throws light upon only a few stretches of the way, whose total length would have to be reckoned in millions of miles. However, even that little bit is a help when, as psychotherapists, we are called upon to remedy a disturbance in the sphere of instinct. Here it is the therapeutic myths offered by religion that teach us the most. The religions might indeed be considered as psychotherapeutic systems which assist our understanding of instinctual disturbances, for these are not a recent phenomenon but have existed from time immemorial. Although certain types of disease, notably infectious ones like *typhus antiquorum*, may disappear and others take their place, it is still not very probable that tuberculosis, shall we say, was an entirely different disease five or ten thousand years ago. The same is true of psychic processes. Therefore, in the descriptions of abnormal psychic states left us by antiquity, we are able to recognize certain features that are familiar to us; and when it comes to the fantasies of neurotic and psychotic patients, it is just here, in ancient literature, that we find the most illuminating parallels.

[1232] From the empirical evidence, it has now been known for some time that any one-sidedness of the conscious mind, or a disturbance of the psychic equilibrium, elicits a compensation from the unconscious. The compensation is brought about by the constellation and accentuation of complementary material which assumes archetypal forms when the *fonction du réel*, or correct relation to the surrounding world, is disturbed. When, for instance, a woman develops too masculine an attitude—something that may very easily happen owing to the social emancipation of women today—the unconscious compensates this one-sidedness by a symptomatic accentuation of certain feminine traits. This process of compensation takes place within the personal sphere so long as the vital interests of the personality have not been harmed. But if more profound disturbances should occur, as when a women alienates herself from her husband through her insistence on always being in the right, then archetypal figures appear on the scene. Difficulties of this kind are very common, and once they have grown to pathological proportions they can be remedied only by psychotherapeutic methods. For this reason, it has long been the endeavour of analytical psychologists to acquire as wide a knowledge as possible of the network of archetypal images produced by the unconscious, with a view to understanding the nature of the archetypal compensation in each individual case.

[1233] Dr. Harding’s systematic survey of the archetypal material of feminine compensation comes as a most welcome contribution to these endeavours, and we must be grateful to her for having devoted herself to this task with such self-sacrificing effort in addition to her professional work. Her investigation is valuable and important not only for the specialist but for the educated layman who is interested in a psychology founded on experience of life and a knowledge of human nature. Our times, characterized as they are by an almost total disorientation in regard to the ends of human existence, stand in need, above all else, of a vast amount of psychological knowledge.

August 1948

FOREWORD TO NEUMANN: “THE ORIGINS AND HISTORY OF CONSCIOUSNESS”[1]

[1234] The author has requested me to preface his book with a few words of introduction, and to this I accede all the more readily because I found his work more than usually welcome. It begins just where I, too, if I were granted a second lease of life, would start to gather up the *disjecta membra* of my own writings, to sift out all those “beginnings without continuations” and knead them into a whole. As I read through the manuscript of this book it became clear to me how great are the disadvantages of pioneer work: one stumbles through unknown regions; one is led astray by analogies, forever losing the Ariadne thread; one is overwhelmed by new impressions and new possibilities; and the worst disadvantage of all is that the pioneer only knows afterwards what he should have known before. The second generation has the advantage of a clearer, if still incomplete, picture; certain landmarks that at least lie on the frontiers of the essential have grown familiar, and one now knows what must be known if one is to explore the newly discovered territory. Thus forewarned and forearmed, a representative of the second generation can spot the most distant connections; he can unravel problems and give a coherent account of the whole field of study, whose full extent the pioneer can only survey at the end of his life’s work.

[1235] This difficult and meritorious task the author has performed with outstanding success. He has woven his facts into a pattern and created a unified whole, which no pioneer could have done nor could ever have attempted to do. As though in confirmation of this, the present work opens at the very place where I unwittingly made landfall on the new continent long ago, namely, the realm of *matriarchal symbolism*; and, as a conceptual framework for his discoveries, the author uses a symbol whose significance first dawned on me in my recent writings on the psychology of alchemy: the *uroboros*. Upon this foundation he has succeeded in constructing a unique history of the evolution of consciousness, and at the same time is representing the body of myths as the phenomenology of this same evolution. In this way he arrives at conclusions and insights which are among the most important ever to be reached in this field.

[1236] Naturally to me, as a psychologist, the most valuable aspect of the work is the fundamental contribution it makes to a psychology of the unconscious. The author has placed the concepts of analytical psychology—which for many people are so bewildering—on a firm evolutionary basis, and erected upon this a comprehensive structure in which the empirical forms of thought find their rightful place. No system can ever dispense with an over-all hypothesis which in its turn depends upon the temperament and subjective assumptions of the author as well as upon objective data. This factor is of the greatest importance in psychology, for the "personal equation" colours the mode of seeing. Ultimate truth, if there be such a thing, demands the concert of many voices.

[1237] I can only congratulate the author on his achievement. May this brief foreword convey to him my heartfelt thanks.

1 March 1949

FOREWORD TO ADLER: “STUDIES IN ANALYTICAL PSYCHOLOGY”[1]

[1238] It gave me particular pleasure to hear that Dr. Gerhard Adler’s admirable book *Studies in Analytical Psychology* is now to appear in German. The author is a skilled psychotherapist and therefore in a position to handle his theme on the basis of practical experience. This advantage can hardly be overrated, for therapeutic work means not only the daily application of psychological views and methods to living people and to sick people in particular, but also a daily criticism which success or failure brings to bear upon the therapy and its underlying assumptions. We may therefore expect from the author a well-pondered judgment amply backed by experience. In this expectation we are not disappointed. Everywhere in these essays we come across nicely balanced opinions and never upon prejudices, bigotries, or forced interpretations.

[1239] With a happy choice the author has picked out a number of problems which must inevitably engage the attention of every thinking psychotherapist. First and foremost he has been concerned—very understandably—to stress the peculiarity of analytical psychology as compared with the materialistic and rationalistic tendencies of the Freudian school—an undertaking which, in view of the latter’s delight in sectarian seclusion, has still lost nothing of its topicality. This is by no means a matter of specialist or merely captious differences that would not interest a wider public; it is more a matter of principle. A psychology that wants to be scientific can no longer afford to base itself on so-called philosophical premises such as materialism or rationalism. If it is not to overstep its competence irresponsibly, it can only proceed phenomenologically and abandon preconceived opinions. But the opinion that we can pass transcendental judgments, even when faced with highly complicated material like that presented by psychological experience, is so ingrown that philosophical statements are still imputed to analytical psychology, although this is completely to misunderstand its phenomenological standpoint.

[1240] A major interest of psychotherapy is, for practical reasons, the psychology of dreams, a field where theoretical assumptions have not only suffered the greatest defeats but are applied at their most odious. The dream analysis in the third essay is exemplary.

[1241] It is much to be welcomed that the author pays due attention to the important role of the ego. He thus counters the common prejudice that analytical psychology is only interested in the unconscious, and at the same time he gives instructive examples of the relations between the unconscious and the ego in general.

[1242] The controversial question of whether, and if so how, the raising to consciousness of unconscious contents is therapeutically effective meets with adequate treatment. Although their conscious realization is a curative factor of prime importance, it is by no means the only one. Besides the initial “confession” and the emotional “abreaction” we have also to consider transference and symbolization. The present volume gives excellent illustrations of the latter two from case histories.

[1243] It is much to the credit of the author that he has also turned to the religious aspect of psychic phenomena. This question is not only delicate—it is particularly apt to irritate philosophical susceptibilities. But, provided that people are able to read and to give up their prepossessions, I truly have no idea how anybody could feel himself affronted by the author’s remarks—provided, again, that the reader is able to understand the phenomenological viewpoint of science. Unhappily this understanding, as I often had occasion to know, does not appear to be particularly widespread—least of all, it would seem, in professional medical circles. The theory of knowledge does not of course figure in the medical curriculum, but is indispensable to the study of psychology.

[1244] Not only on account of the lucidity of its exposition, but also because of its wealth of illustrative case histories, this book fills a gap in psychological literature. It gives both the professional and the psychologically minded layman a welcome set of bearings in territory which—at any rate to begin with—most people find rather hard of access. But the examples drawn direct from life offer an equally direct approach, and this is an aid to understanding. I would therefore like to recommend this book most cordially to the reading public.

May 1949

FOREWORD TO JUNG: “GESTALTUNGEN DES UNBEWUSSTEN” (1950)[1]

[1245] In so far as poetry is one of those psychic activities that give shape to the contents of the unconscious, it seems to me not unfitting to open this volume with an essay which is concerned with a number of fundamental questions affecting the poet and his work.[1a] This discussion is followed by a lecture on the rebirth motif,[2] given on the occasion of a symposium on this theme. Drama, the principal theme of poetic art, had its origin in ceremonial, magically effective rites which, in form and meaning, represented a *δρωμένον* or *δρὰμα*, something “acted” or “done.” During this time the tension builds up until it culminates in a *περεπέτεια*, the dénouement, and is resolved. Menacingly, the span of life narrows down to the fear of death, and out of this *angustiae* (straits, quandary, wretchedness, distress) a new birth emerges, redemptive and opening on to larger horizons. It is evident that drama is a reflection of an eminently psychological situation which, infinitely varied, repeats itself in human life and is both the expression and the cause of a universally disseminated archetype clothed in multitudinous forms.

[1246] The third contribution is a case history.[3] It is the description of a process of transformation illustrated by pictures. This study is supplemented by a survey of mandala symbolism drawn from case material.[4] The interpretation of these pictures is in the main formal and, unlike the preceding essay, lays more emphasis on the common denominators in the pictures than on their individual psychology.

[1247] The fifth and last contribution is a psychological study of E.T.A. Hoffmann’s tale “The Golden Pot,” by Aniela Jaffé.[5] This tale of Hoffmann’s has long been on my list of literary creations which cry out for interpretation and deeper understanding. I am greatly indebted to Mrs. Jaffé for having undertaken the not inconsiderable labour of investigating the psychological background of “The Golden Pot,” thus absolving me from a task which I felt to be an obligation.

January 1949

FOREWORD TO WICKES: “VON DER INNEREN WELT DES MENSCHEN”[1]

[1248] Frances G. Wickes’ book, which first appeared in America in 1938,[2] is now available in a German translation. It is the fruit of a long and industrious life, uncommonly rich in experience of people of all classes and ages. Anyone who wishes to form a picture of the inner life of the psyche and broaden his knowledge of psychic phenomena in general is warmly recommended to read this book. The author has taken the greatest pains to express the inner experiences of her patients with the help of the viewpoints I have introduced into psychology. Her collection of case histories is of the greatest value to the skilled psychotherapist and practising psychologist, not to mention the layman, for whom she opens vistas into a world of experience hitherto inaccessible to him.

[1249] If, as in this book, fantasy is taken for what it is—a natural expression of life which we can at most seek to understand but cannot correct—it will yield possibilities of psychic development that are of the utmost importance for the cure of psychogenic neuroses and of the milder psychotic disturbances. Fantasies should not be negatively valued by subjecting them to rationalistic prejudices; they also have a positive aspect as creative compensations of the conscious attitude, which is always in danger of incompleteness and one-sidedness. Fantasy is a self-justifying biological function, and the question of its practical use arises only when it has to be channeled into so-called concrete reality. So long as this situation has not arisen, it is completely beside the point to explain fantasy in terms of some preconceived theory and to declare it invalid, or to reduce it to some other biological process. Fantasy is the natural life of the psyche, which at the same time harbours in itself the irrational creative factor. The neurotic’s involuntary over- or undervaluation of fantasy is as injurious to the life of the psyche as its rationalistic condemnation or suppression, for fantasy is not a sickness but a natural and vital activity which helps the seeds of psychic development to grow.

Frances Wickes illustrates this in exemplary fashion by describing the typical figures and phases that are encountered in involuntary fantasy processes.

September 1953

FOREWORD TO JUNG: “VON DEN WURZELN DES BEWUSSTSEINS” (1954)[1]

[1250] In this ninth volume of the “Psychologische Abhandlungen” I have put together a number of works which for the most part grew out of Eranos lectures. Some have been revised, some augmented, and some completely reworked. The essay on “The Philosophical Tree” is new, although I have dealt with this theme earlier in a sketchy way. The central theme of this book is the *archetype*, the nature and significance of which are described and elucidated from various angles: history, psychology both practical and theoretical, case material. In spite of the fact that this theme has often been discussed by me as well as by other authors, such as Heinrich Zimmer, Karl Kerényi, Erich Neumann, Mircea Eliade, etc., it has proved to be both inexhaustible and particularly difficult to comprehend, if one may give credence to criticisms vitiated by prejudice and misunderstanding. One is left with the suspicion that the psychological standpoint and its consequences are felt in many quarters to be disagreeable and for this reason are not permitted a hearing. The simplistic approach is instantly assured of the applause of the public because it pretends to make the answering of difficult questions superfluous, but well-founded observations that cast doubt on things which appear simple and settled arouse displeasure. The theory of archetypes seems to come into this category. For some it is self-evident and a welcome aid in understanding symbol-formation, individual as well as historical and collective. For others it seems to epitomize an annoying aberration that has to be extirpated by all possible means, however ridiculous.

[1251] Although it is easy to demonstrate the existence and efficacy of the archetypes, their phenomenology leads to really difficult questions of which I have given a few samples in this book. For the present there is still no possibility of simplification and of building highways “that fools may not err.”

May 1953

FOREWORD TO VAN HELSDINGEN: “BEELDEN UIT HET ONBEWUSTE”[1]

[1252] Dr. R. J. van Helsdingen has asked me to write a foreword to his book. I am happy to comply with his request for a particular reason: the case that is discussed and commented on was one that I treated many years ago, as can now be said publicly with the kind permission of my former patient. Such liberality is not encountered everywhere, because many one-time patients are understandably shy about exposing their intimate, tormenting, pathogenic problems to the eye of the public. And indeed one must admit that their drawings or paintings do not as a rule have anything that would recommend them to the aesthetic needs of the public at large. If only for technical reasons the pictures are usually unpleasant to look at and, lacking artistic power, have little expressive value for outsiders. These shortcomings are happily absent in the present case: the pictures are artistic compositions in the positive sense and are uncommonly expressive. They communicate their frightening, daemonic content to the beholder and convince him of the terrors of a fantastic underworld.

[1253] While it was the patient’s own mother country that produced the great masters of the monstrous, Hieronymus Bosch and others, who opened the flood-gates of creative fantasy, the pictures in this book show us imaginative activity unleashed in another form: the Indomalaysian phantasmagoria of pullulating vegetation and of fear-haunted, stifling tropical nights. Environment and inner disposition conspired to produce this series of pictures which give expression to an infantile-archaic fear. Partly it is the fear of a child who, deprived of her parents, is defencelessly exposed to the unconscious and its menacing, phantasmal figures; partly the fear of a European who can find no other attitude to everything that the East conjures up in her save that of rejection and repression. Because the European does not know his own unconscious, he does not understand the East and projects into it everything he fears and despises in himself.

[1254] For a sensitive child it is a veritable catastrophe to be removed from her parents and sent to Europe after the unconscious influence of the Oriental world had moulded her relation to the instincts, and then, at the critical period of puberty, to be transported back to the East, when this development had been interrupted by Western education and crippled by neglect.[2] The pictures not only illustrate the phase of treatment that brought the contents of her neurosis to consciousness, they were also an instrument of treatment, as they reduced the half conscious or unconscious images floating about in her mind to a common denominator and fixated them. Once an expression of this kind has been found, it proves its "magical" efficacy by putting a spell, as it were, on the content so represented and making it relatively innocuous. The more complex this content is, the more pictures are needed to depotentiate it. The therapeutic effect of this technique consists in inducing the conscious mind to collaborate with the unconscious, the latter being integrated in the process. In this way the neurotic dissociation is gradually remedied.

[1255] The author is to be congratulated on having edited this valuable and unusual material. Although only the initial stages of the analysis are presented here, some of the pictures indicate possibilities of a further development. Even with these limitations, however, the case offers a considerable enrichment of the literature on the subject, which is still very meagre.

May 1954

FOREWORD TO JACOBI: “COMPLEX/ARCHETYPE/SYMBOL”[1]

[1256] The problem this book is concerned with is one in which I, too, have been interested for a long time. It is now exactly fifty years since I learned, thanks to the associaton experiment, the role which complexes play in our conscious life. The thing that most impressed me was the peculiar autonomy the complexes display as compared with the other contents of consciousness. Whereas the latter are under the control of the will, coming or going at its command, complexes either force themselves on our consciousness by breaking through its inhibiting effect, or else, just as suddenly, they obstinately resist our conscious intention to reproduce them. Complexes have not only an obsessive, but very often a possessive, character, behaving like imps and giving rise to all sorts of annoying, ridiculous, and revealing actions, slips of the tongue, and falsifications of memory and judgment. They cut across the adapted performance of consciousness.

[1257] It was not difficult to see that while complexes owe their relative autonomy to their emotional nature, their expression is always dependent on a network of associations grouped round a centre charged with affect. The central emotion generally proved to be individually acquired, and therefore an exclusively personal matter. Increasing experience showed, however, that the complexes are not infinitely variable, but mostly belong to definite categories, which soon began to acquire their popular, and by now hackneyed, names—inferiority complex, power complex, father complex, mother complex, anxiety complex, and all the rest. This fact, that there are well-characterized and easily recognizable types of complex, suggests that they rest on equally typical foundations, that is, on emotional aptitudes or *instincts*. In human beings instincts express themselves in the form of unreflected, involuntary fantasy images, attitudes, and actions, which bear an inner resemblance to one another and yet are identical with the instinctive reactions specific of *Homo sapiens*. They have a dynamic and a formal aspect. Their formal aspect expresses itself, among other things, in fantasy images that are surprisingly alike and can be found practically everywhere at all epochs, as might have been expected. Like the instincts, these images have a relatively autonomous character; that is to say, they are “numinous” and can be found above all in the realm of numinous or religious ideas.

[1258] For reasons that I cannot enter into here, I have chosen the term “archetype” for this formal aspect of the instinct. Dr. Jacobi has made it her task, in this book, to expound the important connection on the one hand between the individual complex and the universal, instinctual archetype, and on the other hand between this and the symbol. The appearance of her study is the more welcome to me in that the concept of the archetype has given rise to the greatest misunderstandings and—if one may judge by the adverse criticisms—must be presumed to be very difficult to comprehend. Anyone, therefore, who has misgivings on this score can seek information in this volume, which also takes account of much of the literature. My critics, with but few exceptions, usually do not take the trouble to read over what I have to say on the subject, but impute to me, among other things, the opinion that the archetype is an inherited idea. Prejudices seem to be more convenient than seeking the truth. In this respect, too, I hope that the author’s endeavours, especially the theoretical considerations contained in Part I, illustrated by examples of the archetype’s mode of manifestation and operation in Part II, may shed a little illumination. I am grateful to her for having spared me the labour of having constantly to refer my readers to my own writings.

February 1956

FOREWORD TO BERTINE: “HUMAN RELATIONSHIPS”[1]

[1259] The author of this book has undertaken the important task of investigating the problems of human relationship from the standpoint of analytical psychology, an undertaking which will be welcome not only to the psychotherapist but also to those interested in the wider field of general psychology. Facts that are of the greatest significance for an understanding of human relationships have undoubtedly come to light in the course of my own and my colleagues’ researches. While the conclusions which Freud and Adler had drawn from their intensive studies of neurosis were based on the personal psychology of their neurotic patients, which they tried to apply to the psychology of society, analytical psychology has called attention to more general human facts which also play an important role in neurosis but are not specifically characteristic of it, being a normal part of the human constitution. I would mention in particular the existence of differences in type, such as extraversion and introversion, which are not difficult for a layman to recognize. It is obvious that these two diametrically opposed attitudes must have a very decisive influence on the relationship of individuals, and the psychology of the function types—thinking, feeling, sensation, and intuition—further differentiates the general effects of extraversion and introversion.

[1260] These attitude and function types belong mainly to man’s conscious psychology. The researches of analytical psychology have shown, further, that it is not only the data of the senses and unconscious personal repressions which exert an influence of consciousness. It is also profoundly affected by unconscious, instinctive—that is, innate—patterns of psychic behaviour. These patterns are just as characteristic of man as are the instincts in the behaviour of animals. But while we know about the instinctive patterns in animals only by observing their outward behaviour, the human psyche offers a great advantage in that—thanks to ideas and language—the instinctive process can be visualized in the form of fantasy images, and this inner perception can be communicated to an outside observer by means of speech. If the animal psyche were capable of such an accomplishment, we would be able to recognize the mythology which the weaver bird is expressing when it builds its nest, and the yucca moth when it deposits its eggs in the yucca flower.[2] That is, we would know what kind of fantasy images trigger off their instinctive actions. This insight, however, is possible only in the case of human beings, where it opens up the boundless world of myth and folklore that spans the globe with analogies and parallel motifs. The images which appear here conform with those in dreams and hallucinations to an astonishing degree, to say the least.

[1261] This discovery was actually made by Freud, and he erected a monument to it in his concept of the Oedipus complex. He was gripped by the numinosity of this motif, or archetype, and accordingly gave it a central place in his theory-building. But he failed to draw the further and inescapable conclusion that there must be another, “normal” unconscious beyond the one produced by arbitrary repressions. This “normal” unconscious consists of what Freud described as “archaic remnants.” But if the Oedipus complex represents a universal type of instinctive behaviour independent of time, place, and individual conditioning, it follows inevitably that it cannot be the only one. Although the incest complex is undoubtedly one of the most fundamental and best known complexes, it must obviously have its feminine counterpart which will express itself in corresponding forms. (At the time I proposed calling it the Electra complex.)[3] But incest, after all, is not the only complication in human life, though this sometimes seems to be the case according to Freudian psychology. There are also other typical patterns which regulate the relation of father to son, mother to daughter, parents to children, brothers and sisters to each other, and so on. Oedipus is only one of the existing patterns and determines only the behaviour of the son, and this only up to a point. Mythology, folklore, dreams, and psychoses do not fall short in this respect. They offer a veritable plethora of patterns and formulas not only for family relationships but also for man and woman, individual and society, conscious and unconscious, dangers to body and soul, and so forth.

[1262] These archetypes exert a decisive influence on human relationships. Here I would mention only the eminently practical significance of the animus (the archetype of man in woman) and anima (the archetype of woman in man), which are the source of so much fleeting happiness and long-drawn-out suffering in marriage and friendship.

[1263] The author has much to say about these things, based on her medical practice and on her arduous but rewarding work with people. She deserves to be heard, and I hope her book will find a large number of attentive readers.

August 1956

PREFACE TO DE LASZLO: “PSYCHE AND SYMBOL”[1]

[1264] Dr. de Laszlo has risked shocking the American reader by including some of my most difficult essays in her selection from my writings. In sympathy with the reader I acknowledge how tempting if not unavoidable it is to fall into the trap of appearances as the eye wanders over the pages in a vain attempt to get at the gist of the matter in the shortest possible time. I know of so many who, opening one of my books and, stumbling upon a number of Latin quotations, shut it with a bang, because Latin suggests history and therefore death and unreality. I am afraid my works demand some patience and some thinking. I know: it is very hard on the reader who expects to be fed by informative headlines. It is not the conscientious scientist’s way to bluff the public with impressive résumés and bold assertions. He tries to explain, to produce the necessary evidence, and thus to create a basis for understanding. In my case, moreover, understanding is not concerned with generally known facts, but rather with those that are little known or even new. It was therefore incumbent upon me to make these facts known. In so far as such unexpected novelties demand equally unexpected means of explanation I found myself confronted with the task of explaining the very nature of my evidential material.

[1265] The facts are experiences gained from a careful and painstaking analysis of certain psychic processes observed in the course of psychic treatment. As these facts could not be satisfactorily explained by themselves, it was necessary to look round for possible comparisons. When, for instance, one comes across a patient who produces symbolic mandalas in his dreams or his waking imagination and proceeds to explain these circular images in terms of certain sexual or other fantasies, this explanation carries no conviction, seeing that another patient develops wholly different motivations. Nor is it permissible to assume that a sexual fantasy is a more likely motivation than, for instance, a power drive, since we know from experience that the individual’s disposition will of necessity lead him to give preference to the one or the other. Both patients, on the other hand, may have one fact in common—a state of mental and moral confusion. We would surely do better to follow up this clue and try to discover whether the circular images are connected with such a state of mind. Our third case producing mandalas is perhaps a schizophrenic in such a disturbed state that he cannot even be asked for his accompanying fantasies. This patient is obviously completely dissolved in a chaotic condition. Our fourth case is a little boy of seven who has decorated the corner of the room where his bed stands with numerous mandalas without which he cannot go to sleep. He only feels safe when they are around him. His fantasy tells him that they protect him against nameless fears assailing him in the night. What is his confusion? His parents are contemplating divorce.[2] And what shall we say of a hard-boiled scientific rationalist who produced mandalas in his dreams and in his waking fantasies? He had to consult an alienist, as he was about to lose his reason because he had suddenly become assailed by the most amazing dreams and visions. What was *his* confusion? The clash between two *equally real* worlds, one external, the other internal: a fact he could no longer deny.[3]

[1266] There is no need to prolong this series since, leaving aside all theoretical prejudices, the underlying reason for producing a mandala seems to be a certain definable mental state. But have we any evidence which might explain why such a state should produce a mandala? Or is this mere chance? Consequently we must ask whether our experiences are the only ones on record and, if not, where we can find comparable occurrences. There is no difficulty in finding them; plenty of parallels exist in the Far East and the Far West, or right here in Europe, several hundred years ago. The books of reference can be found in our university libraries, but for the last two hundred years nobody has read them, and they are—oh horror!—written in Latin and some even in Greek. But are they dead? Are those books not the distant echo of life once lived, of minds and hearts quick with passions, hopes, and visions, as keen as our own? Does it matter so much whether the pages before us tell the story of a patient still alive, or dead for fifty years? Does it really matter whether their confessions, their anguish, their strivings speak the English of today or Latin or Greek? No matter how much we are of today, there has been a yesterday, which was just as real, just as human and warm, as the moment we call Now, which—alas—in a few hours will be a yesterday as dead as the first of January anno Domini 1300. A good half of the reasons why things now are what they are lies buried in yesterday. Science in its attempt to establish causal connections has to refer to the past. We teach comparative anatomy, why not comparative psychology? The psyche is not only of today, it reaches right back to prehistoric ages. Has man really changed in ten thousand years? Have stags changed their antlers in this short lapse of time? Of course the hairy man of the Ice Ages has become unrecognizable when you try to discover him among the persons you meet on Fifth Avenue. But you will be amazed when you have talked with them for a hundred hours about their intimate life. You will then read the mouldy parchments as if they were the latest thrillers. You will find the secrets of the modern consulting room curiously expressed in abbreviated mediaeval Latin or in an intricate Byzantine hand.

[1267] What the doctor can hear, when he listens attentively, of fantasies, dreams, and intimate experiences is not mentioned in the Encyclopaedia Britannica or in textbooks and scientific journals. These secrets are jealously guarded, anxiously concealed, and greatly feared and esteemed. They are very private possessions, never divulged and talked about, because they are feared as ridiculous and revered as revelations. They are numinous, a doubtful treasure, perhaps comical, perhaps miraculous, at all events a painfully vulnerable spot, yet presiding over all the crossroads of one’s individual life. They are officially and by general consent just as unknown and despised as the old parchments with their indecipherable and unaesthetic hieroglyphics, evidence of old obscurantisms and foolishness. We are ignorant of their contents, and we are equally ignorant of what is going on in the deeper layers of our unconscious, because “those who know do not talk, those who talk do not know.”[4] As inner experiences of this kind increase, the social nexus between human beings decreases. The individual becomes isolated for no apparent reason. Finally this becomes unbearable and he has to confide in someone. Much will then depend on whether he is properly understood or not. It would be fatal if he were to be misinterpreted. Fortunately, such people are instinctively careful and as a rule do not talk more than necessary.

[1268] When one hears a confession of this kind, and the patient wants to understand himself better, some comparative knowledge will be most helpful. When the hard-boiled rationalist mentioned above came to consult me for the first time, he was in such a state of panic that not only he but I myself felt the wind blowing over from the lunatic asylum! As he was telling me of his experiences in detail he mentioned a particularly impressive dream. I got up and fetched an ancient volume from my bookshelf and showed it to him, saying: "You see the date? Just about four hundred years old. Now watch!" I opened the book at the place where there was a curious woodcut, representing his dream almost literally. "You see," I said, "your dream is no secret. You are not the victim of a pathological insult and not separated from mankind by an inexplicable psychosis. You are merely ignorant of certain experiences well within the bounds of human knowledge and understanding." It was worth seeing the relief which came over him. He had seen with his own eyes the documentary evidence of his sanity.

[1269] This illustrates why historical comparison is not a mere learned hobby but very practical and useful. It opens the door to life and humanity again, which had seemed inexorably closed. It is of no ultimate advantage to deny or reason away or ridicule such seemingly abnormal or out-of-the-way experiences. They should not get lost, because they contain an intrinsic individual value, the loss of which entails definite damage to one's personality. One should be aware of the high esteem which in past centuries was felt for such experiences, because it explains the extraordinary importance that we ignorant moderns are forced to attribute to them in spite of ourselves.

[1270] Understanding an illness does not cure it, but it is a definite help because you can cope with a comprehensible difficulty far more easily than with an incomprehensible darkness. Even if in the end a rational explanation cannot be reached, you know at least that you are not the only one confronted by a "merely imaginary" wall, but one of the many who have vainly tried to climb it. You still share the common human lot and are not cut off from humanity by a subjective defect. Thus you have not suffered the irreparable loss of a personal value and are not forced to continue your way on the crutches of a dry and lifeless rationalism. On the contrary, you find new courage to accept and integrate the irrationality of your own life and of life in general.

[1271] Instincts are the most conservative determinants of any kind of life. The mind is not born a *tabula rasa*. Like the body, it has its predetermined individual aptitudes: namely, patterns of behaviour. They become manifest in the ever-recurring patterns of psychic functioning. As the weaver-bird will infallibly build its nest in the accustomed form, so man despite his freedom and superficial changeability will function psychologically according to his original patterns—up to a certain point; that is, until for some reason he collides with his still living and ever-present instinctual roots. The instincts will then protest and engender peculiar thoughts and emotions, which will be all the more alien and incomprehensible the more man's consciousness has deviated from its original conformity to these instincts. As nowadays mankind is threatened with self-destruction through radioactivity, we are experiencing a fundamental reassertion of our instincts in various forms. I have called the psychological manifestations of instinct "archetypes."

[1272] The archetypes are by no means useless archaic survivals or relics. They are living entities which cause the preformation of numinous ideas or dominant representations. Insufficient understanding, however, accepts these prefigurations in their archaic form, because they have a numinous fascination for the underdeveloped mind. Thus Communism is an archaic, highly insidious pattern of life which characterizes primitive social groups. It implies lawless chieftainship as a vitally necessary compensation, a fact which can be overlooked only by means of a rationalistic bias, the prerogative of a barbarous mind.

[1273] It is important to remember that my concept of the archetypes has been frequently misunderstood as denoting inherited ideas or as a kind of philosophical speculation. In reality they belong to the realm of instinctual activity and in that sense they represent inherited patterns of psychic behaviour. As such they are invested with certain dynamic qualities which, psychologically speaking, are characterized as “autonomy” and “numinosity.”

[1274] I do not know of any more reliable way back to the instinctual basis than through an understanding of these psychological patterns, which enable us to recognize the nature of an instinctive attitude. The instinct to survive is aroused as a reaction against the tendency to mass suicide represented by the H-bomb and the underlying political schism of the world. The latter is clearly man-made and due to rationalistic distortions. Conversely, if understood by a mature mind, the archetypal preformations can yield numinous ideas ahead of our actual intellectual level. That is just what our time is in need of. This, it seems to me, is an additional incentive to pay attention to the unconscious processes which in many persons today anticipate future developments.

[1275] I must warn the reader: this book will not be an easy pastime. Once in a while he will meet with thoughts which demand the effort of concentration and careful reflection—a condition unfortunately rare in modern times. On the other hand, the situation today seems to be serious enough to cause at least uneasy dreams if nothing else.

August 1957

FOREWORD TO BRUNNER: “DIE ANIMA ALS SCHICKSALSPROBLEM DES MANNES”[1]

[1276] The antecedents of this book are such that it might give rise to misunderstandings unless the reader is acquainted with them beforehand. Let me therefore say at once that its subject-matter is a dialogue extending over a period of eight years. The partners to this dialogue made it a condition from the start that the record they kept of it should be as honest and complete as was humanly possible. In order to fulfil this condition, and not restrict it to the conscious aspects of the situation, they made it their task to take note also of the unconscious reactions that accompanied or followed the dialogue. Obviously, this ambitious project could be completed only if the unconscious reactions of *both* partners were recorded. A “biographical” debate of such a nature would indeed be something unique in our experience, requiring exceptionally favourable circumstances for its realization. In view of the unusual difficulties she was faced with, the author deserves our thanks for having reproduced, scrupulously and in all the necessary detail, at least three-quarters of the dialogue. Her experiment will be acclaimed by all those who are interested in the real life of the psyche, and more particularly because it gives a vivid account of a typical masculine problem which invariably arises in such a situation.

[1277] Although every case of this kind follows an archetypal ground plan, its value and significance lie in its uniqueness, and this uniqueness is the criterion of its objectivity. The true carrier of reality is the individual, and not the “statistical average” who is a mere abstraction. So if the author confines her observations to two persons only, this shows her feeling for the psychological facts. The value of the personality, too, lies in its uniqueness, and not in its collective and statistical qualities, which are merely those of human species and, as such, irreducible factors of a suprapersonal nature. Although the limitation to two persons creates an “unscientific” impression of subjectivity, it is actually a guarantee of psychological objectivity: this is how real psychic life behaves, this is what happens in reality. That part of it which can be formulated theoretically belongs to the common foundations of psychic life and can therefore be observed just as easily under other conditions and in other individuals. Scientific insight is essentially a by-product of a psychological process of dialectic. During this process, “true” and “untrue,” “right” and “wrong” are valid only in the moral sense and cannot be judged by any general criterion of “truth” or “rightness.” “True” and “right” simply tell us whether what is happening is “true” or “right” for the person concerned.

[1278] The reader of this book is thus an invisible listener at a serious dialogue between two cultivated persons of our time, who discuss the various questions that come their way. Both of them make their contribution in complete freedom and remain true to their purpose throughout. I lay particular emphasis on this because it is by no means certain at the outset that such a dialogue will be continued. Often these discussions come to an abrupt stop for lack of enthusiasm in one partner or both, or for some other reason, good or bad. Very often, too, they give up at the first difficulty. The circumstances must have been unusually favourable for the dialogue to have continued over such a long period of time. Special credit is due to the author for having recorded the proceedings on two levels at once and successfully communicated them to the outside world. The thoughts and interior happenings she describes form a most instructive *document humain*, but its very uniqueness exposes it to the danger of being misunderstood and contemptuously brushed aside as a “subjective fantasy.” For it is concerned mainly with that special relationship which Freud summed up under the term “transference,” whose products he regarded as “infantile fantasies.” As a result of this devaluation and rationalistic prejudice, their importance as phenomena of psychic transformation was not recognized. This scientific sin of omission is only one link in the long chain of devaluation of the human psyche that has nothing to justify it. It is a symptom of profound unconsciousness that our scientific age has lost sight of the paramount importance of the psyche as a fundamental condition of human existence. What is the use of technological improvements when mankind must still tremble before those infantile tyrants, ridiculous yet terrible, in the style of Hitler? Figures like these owe their power only to the frightening immaturity of the man of today, and to his barbarous unconsciousness. Truly we can no longer afford to underestimate the importance of the psychic factor in world affairs and to go on despising the efforts to understand psychic processes. We are still very far from understanding where we ourselves are at fault, and this book should grant us a deep insight. It is, indeed, only a random sample, but all experience consists of just that. Without individual experience there can be no general insight.

[1279] The author has done well to take a well-known case from the history of literature as an introduction to the real *pièce de resistance* of her book. The case is that of Rider Haggard, who was afflicted with a similar problem. (One might also mention Pierre Benoît and Gérard de Nerval.) Rider Haggard is without doubt the classic exponent of the anima motif, though it had already appeared among the humanists of Renaissance, for instance, as the nymph Polia in the *Hypnerotomachia* of Francesco Colonna,[2] or as a psychological concept in the writings of Richard White of Basingstoke,[3] or as a poetic figure among the "fedeli d'amore."[4]

[1280] The motif of the anima is developed in its purest and most naïve form in Rider Haggard. True to his name, he remained her faithful knight throughout his literary life and never wearied of his conversation with her. He was a spiritual kinsman of René d'Anjou, a latter-day troubadour or knight of the Grail, who had somehow blundered into the Victorian Age and was himself one of its most typical representatives. What else could he do but spin his strange tale of past centuries, harking back to the figures of Simon Magus and Helena, Zosimos and Theosebeia, in the somewhat sorry form of a popular "yarn?" Psychology, unfortunately, cannot take aesthetic requirements into account. The greatness and importance of a motif like that of the anima bear no relation to the form in which it is presented. If Rider Haggard uses the modest form of a yarn, this does not detract from the psychological value of its content. Those who seek entertainment or the higher art can easily find something better. But anyone who wants to gain insight into his own anima will find food for thought in *She*, precisely because of the simplicity and naïveté of presentation, which is entirely devoid of any "psychological" intent.

[1281] Rider Haggard's literary work forms an excellent introduction to the real purpose of this book, since it provides a wealth of material illustrating the symbolism of the anima and its problems. Admittedly, *She* is only a flash in the pan, a beginning without continuation, for at no point does the book come down to earth. Everything remains stuck in the realm of fantasy, a symbolic anticipation. Rider Haggard was unaware of his spiritual predecessors, so did not know that he had been set a task at which the philosophical alchemists had laboured, and which the last of the Magna Opera, Goethe's *Faust*, could bring to fruition not in life but only after death, in the Beyond, and then only wistfully. He followed in the footsteps of the singers and poets who enchanted the age of chivalry. The romantic excursions of his German contemporary, Richard Wagner, did not pass off so harmlessly. A dangerous genius, Friedrich Nietzsche, had a finger in the pie and Zarathustra raised his voice, with no wise woman at his side as partner to the dialogue. This mighty voice emanated from a migraine-ridden bachelor, "six thousand feet beyond good and evil," who met his "Dudu and Suleika"[5] only in the tempests of madness and penned those confessions which so scandalized his sister that traces of them can be found only in his clinical history. This sounds neither good nor beautiful, but it is part of the business of growing up to listen to the fearful discords which real life grinds out and to include them among the images of reality. Truth and reality are assuredly no music of the spheres—they are the beauty and terror of Nature herself.

[1282] The richest yield of all is naturally to be found in the primary material itself, that is to say in the dreams, which are not thought up or "spun" like a yarn. They are involuntary products of nature, spontaneously expressing the psychic processes without the interference of the conscious will. But this richness reveals itself, one might say, only to him who understands the language of animals and plants. Although this is a tall order, it is not putting too great a burden on the learning capacity of an intelligent person who has a moderate amount of intuition and a healthy aversion for doctrinal opinions. Following its instinct for truth, intuition goes along with the stream of images, feels its way into them until they begin to speak and yield up their meaning. It rediscovers forgotten or choked-up paths where many have wandered in distant times and places—perhaps even one’s partner in the dialogue. Picking up the trail, he will pursue a parallel path and in this way learn the natural structure of the psyche.

[1283] The author has successfully evoked in the dreamer the intuitive attitude he needs in order to follow the unconscious process of development. The “interpretation” does not adhere to any particular theory, but simply takes up the symbolic hints given by the dreams. Even though use is made of psychological concepts such as the anima, this is not a theoretical assumption, because “anima” is merely a name for a special group of typical psychic happenings that anyone can observe. In an extensive dialogue like this, interpretations can only be passing phases and tentative formulations, but they do have to prove themselves correct when taken as a whole. Only at the end of the journey will it be discovered whether they have done so, and whether one was on the right path or not. The dialectical process is always a creative adventure, and at every moment one has to stake one’s very best. Only then, and with God’s help, can the great work of transformation come to pass.

April 1959

XI

CIVILIZATION IN TRANSITION

(related to Volume 10 of the Collected Works)

REPORT ON AMERICA[1]

[1284] Lecturer described a number of impressions he had gained on two journeys in North America.[2] The psychological peculiarities of the Americans exhibit features that would be accessible to psychoanalysis, since they point to intense sexual repression. The reasons for repression are to be sought in the specifically American complex, namely, living together with lower races, more particularly the Negroes. Living together with barbarous races has a suggestive effect on the laboriously subjugated instincts of the white race and drags it down. Hence strongly developed defensive measures are necessary, which manifest themselves in the particular aspects of American culture.

NO THE PSYCHOLOGY OF THE NEGRO[1]

[1285] The psychoses of Negroes are the same as those of white men. In milder cases the diagnosis is difficult because one is not sure whether one is dealing with superstition. Investigation is complicated by the fact that the Negro does not understand what one wants of him, and besides that is ignorant [does not know his age, has no idea of time].[2] He shows a great inability to look into his own thoughts, a phenomenon that is analogous to resistance among our patients. Little is said of hallucinations, and equally little of delusional ideas and dreams. — The Negro is extraordinarily religious: his concepts of God and Christ are very concrete. The lecturer has pointed out on an earlier occasion[3] how certain qualities of the Americans (for instance, their self-control) may be explained by their living together with the (uncontrolled) Negroes. In the same way this living together also exerts an influence on the Negro. For him the white man is pictured as an ideal: in his religion Christ is always a white man. He himself would like to be white or to have white children; conversely, he is persecuted by white men. In the dream examples given by the lecturer, the wish or the task of the Negro to adapt himself to the white man appears very frequently. One is struck by the large number of sacrificial symbols that occur in the dreams, just as the lecturer has mentioned in his book *Wandlungen und Symbole der Libido*.[4] This is yet another indication that such symbols are not only Christian but have their origin in a biological necessity.

A RADIO TALK IN MUNICH[1]

[1286] Your question is not so easy to answer. My interest in these matters was not the result of a primary interest in Chinese philosophy, from a study of which, it might be supposed, I had learnt all sorts of valuable things for my psychology. On the contrary, Chinese thought was very alien to me to begin with. I owe my relations to China and to Richard Wilhelm simply and solely to certain psychological discoveries. In the first place, it was the discovery of the collective unconscious, that is to say, of impersonal psychic processes, that aroused my interest in primitive and Oriental psychology. Among these impersonal psychic processes there are quite a number which seem absolutely strange and incomprehensible and cannot be brought into connection with any of the historical symbols known to us, but for which we can find plenty of unquestionable analogies in the psychologies of the Orient. Thus a whole group or layer of impersonal contents can only be understood in terms of the psychology of primitives, while others have their nearest analogies in India or China. It had previously been supposed that mythological symbols were disseminated by migration. But I have found that the occurrence of the same symbols in different countries and continents does not depend on migration, but rather on the spontaneous revival of the same contents.

[1287] Years of observing such processes has convinced me that—for the present at least—the unconscious psyche of Europeans shows a distinct tendency to produce contents that have their nearest analogies in the older Chinese philosophy and the later Tantric philosophy. This prompted me to submit my observations to the eminent sinologist Richard Wilhelm, who thereupon confirmed the existence of some astonishing parallels. The fruit of our collaboration is the recently published book called *The Secret of the Golden Flower*.[2] These parallels bear out a conjecture I have long held, that our psychic situation is now being influenced by an irruption of the Oriental spirit, and that this is a factor to be reckoned with. What is going on is analogous to the psychic change that could be observed in Rome during the first century of our era. As soon as the Romans, beginning with the campaigns of Pompey, made themselves the political masters of Asia Minor, Rome became inundated with Hellenistic-Asiatic syncretism. The cults of Attis, Cybele, Isis, and the Magna Mater spread throughout the Roman Empire. Mithras conquered Roman officialdom and the entire army, until all these cults were overthrown by Christianity. I do not know how much the spiritual and political decline of Spain and Portugal had to do with their conquest of the primitive South American continent, but the fact remains that the two countries which first established their rule in East Asia, namely Holland and England, were also the first to be thoroughly infected with theosophy. It seems to be a psychological law that though the conquerer may conquer a country physically, he will secretly absorb its spirit. Today the old China has succumbed to the West, and my purely empirical findings show that the Chinese spirit is making itself clearly perceptible in the European unconscious. You will understand that this statement is no more for me than a working hypothesis, but one which can claim a considerable degree of probability in view of the historical analogies.

*

[1288] My journey to Africa[3] arose from the same need that had taken me to New Mexico[4] the year before. I wanted to get to know the psychic life of primitives at first hand. The reason for this is the aforementioned fact that certain contents of the collective unconscious are very closely connected with primitive psychology. Our civilized consciousness is very different from that of primitives, but deep down in our psyche there is a thick layer of primitive processes which, as I have said, are closely related to processes that can still be found on the surface of the primitive's daily life. Perhaps I can best illustrate this difference by means of an example. When I ask an employee to deliver a letter to a certain address, I simply say to him: “Please take this letter to Mr. X.” In Africa I lived for a time with a very primitive tribe, the Elgonyis, who inhabit the primeval forests of Mount Elgon, in East Africa, and are still partly troglodytes. One day I wanted to send some letters. The nearest white men were some engineers who were working at the terminus of a branch line of the Uganda railway, two and a half days’ journey away. In order to reach them, I needed a runner, and at my request the chief put a man at my disposal. I gave him a bundle of letters, telling him in Swahili (which he understood) to take the letters to the white *bwanas*. Naturally, everybody within a radius of a hundred miles would know where to find them, for news travels fast in Africa. But after receiving my order, the man remained standing before me as though struck dumb and did not stir from the spot. I thought he was waiting for baksheesh in the form of cigarettes, and gave him a handful, but he stood there as dumb and stiff as before. I had no idea what this meant, and, looking round me in perplexity, my eye fell on my safari headman Ibrahim, a long thin Somali, who, squatting on the ground, was watching the scene, grinning. In his frightful English he said to me: “You no do it like so, Bwana, but like so—” And he sprang up, seized his rhinoceros whip, cracked it through the air a couple of times in front of the runner, then gripped him by the shoulders, and with shouts and gesticulations delivered himself of the following peroration: “Here, the great bwana M’zee, the wise old man, gives you letters. See, you hold them in your hand. But you must put them in a cleft stick. Ho boys”—this to my servants—“bring a cleft stick, give it to this pagan. Hold it in your hand so—put the letters in the cleft here—bind it tight with grass—so—and now hold it high, so that all will see you are the runner of the great bwana. And now go to the bwanas at the waterfall and seek one till you find him, and then go to him and say to him: ‘The great bwana M’zee has given me letters, they are in my stick here, take them!’ And the white bwana will say: ‘It is well.’ Then you can return home. And now run, but so—” and Ibrahim began running with upraised whip—“so must you run and run, until you come to the place where the little houses go on wheels. Run, run, you dog, run like hell!”’ The runner’s face had gradually lit up as though witnessing a great revelation. Grinning all over, he raised his stick and hurtled away from us, as though shot from a cannon, Ibrahim close behind him with cracking whip and a flood of curses. The man ran 74 miles in 36 hours without stopping.

[1289] Ibrahim had succeeded, with an enormous expenditure of mime and words, in putting the man into the mood of the runner, hypnotizing him into it, so to speak. This was necessary because a mere order from me could not conjure up a single movement. Here you see the chief difference between primitive and civilized psychology: with us a word is enough to release an accumulation of forces, but with primitives an elaborate pantomime is needed, with all manner of embellishments which are calculated to put the man into the right mood for acting. If these primitive vestiges still exist in us—and they do—you can imagine how much there is in us civilized people that cannot catch up with the accelerated tempo of our daily life, gradually producing a split and a counter-will that sometimes takes a culturally destructive form. That this really is so, is clearly shown by the events of the last few decades.

[1290] Naturally, the purpose of my travels was not to investigate only the differences, but also the similarities between the civilized and the primitive mind. Here there are many points of connection. For instance, in dreams we think in very much the same way as the primitive thinks consciously. With primitives, waking life and dream life are less divided than with us—so little, in fact, that it is often difficult to find out whether what a primitive tells you was real or a dream. Everything that we reject as mere fantasy because it comes from the unconscious is of extraordinary importance for the primitive, perhaps more important than the evidence of his senses. He values the products of the unconscious—dreams, visions, fantasies, and so on—quite differently from us. His dreams are an extremely important source of information, and the fact that he has dreamt something is just as significant for him as what happens in reality, and sometimes very much more significant. My Somali boys, those of them that could read, had their Arabic dream books with them as their only reading matter on the journey. Ibrahim assiduously instructed me in what I ought to do if I dreamt of Al Khidr, the Verdant One,[5] for that was the first angel of Allah, who sometimes appeared in dreams.

[1291] For primitives, certain dreams are the voice of God. They distinguish two types of dream: ordinary dreams that mean nothing, and the dreams they call the great vision. So far as I was able to judge, the “big dreams” are of a kind that we too would consider significant. The only dream that occurred while I was there—at least, the only one that was reported to me—was the dream of an old chief, in which he learnt that one of his cows had calved, and was now standing with her calf down by the river, in a particular clearing. He was too old to keep track of his many cattle that pastured in the various open places in the forest, so he naturally didn’t know this cow was going to calve, let alone where. But the cow and the calf were found just where he had dreamt they would be. These people are extraordinarily close to nature. Several other things happened which made it quite clear to me why they were so convinced that their dream told the truth. Part of the reason is that their dreams often fulfil the thinking function over which they still do not have full conscious control. They themselves say that the appearance of the white man in their country has had a devastating effect on the dream life of their medicine-men and chiefs. An old medicine-man told me with tears streaming down his face: “We have no dreams any more since the white man is in the land.” After many talks on this subject, I finally discovered that the leading men owed their leadership chiefly to dreams that came true. Since everything is now under British control, the political leadership has been taken out of the hands of the chiefs and medicine-men. They have become superfluous, and the guiding voice of their dreams is silenced.

FOREWORDS TO JUNG: “SEELENPROBLEME DER GEGENWART”

First Edition (1931)

[1292] The lectures and essays contained in this volume[1] owe their existence primarily to questions addressed to me by the public. These questions are enough in themselves to sketch a picture of the psychological problems of our time. And, like the questions, the answers have come from my personal and professional experience of the psychic life of our so remarkable era. The fundamental error persists in the public that there are definite answers, “solutions,” or views which need only be uttered in order to spread the necessary light. But the most beautiful truth—as history has shown a thousand times over—is of no use at all unless it has become the innermost experience and possession of the individual. Every unequivocal, so-called “clear” answer always remains stuck in the head and seldom penetrates to the heart. The needful thing is not to *know* the truth but to *experience* it. Not to have an intellectual conception of things, but to find our way to the inner, and perhaps wordless, irrational experience—that is the great problem. Nothing is more fruitless than talking of how things must or should be, and nothing is more important than finding the way to these far-off goals. Most people know very well how things should be, but who can point the way to get there?

[1293] As the title of this book shows, it is concerned with problems, not solutions. The psychic endeavours of our time are still caught in the realm of the problematical; we are still looking for the essential question which, when found, is already half the solution. These essays may open the reader’s eyes to our wearisome struggle with that tremendous problem, the “soul,” which perhaps torments modern man in even higher degree than it did his near and distant ancestors.

Küsnacht-Zurich, December 1930

Second Edition (1933)

[1294] As only one and a half years have gone by since the appearance of the first edition, there are no reasons for essential alterations in the text. The collection of my essays therefore appears in unaltered form. And as no fundamental objections or misunderstandings that might have provided occasion for an explanatory answer have become known to me, there is no need either of a longer foreword. At any rate, the reproach of psychologism so often levelled at me would be no excuse for a long disquisition, for no fair-minded person will expect me to prefer the attitude of a metaphysician or a theologian in my own field of work. I shall never stop seeing and judging all observable psychic phenomena psychologically. Every reasonable man knows that this does not express any final and ultimate truth. Absolute assertions belong to the realm of faith—or of immodesty.

Küsnacht-Zurich, July 1932

Italian New Edition (1959)[2]

[1295] This book is a collection of lectures and essays which originated in the 1920’s and constitute volume III of my “Psychologische Abhandlungen.” They are for the most part popular expositions of certain fundamental questions of practical psychology, which concerns itself not only with the sick but with the healthy. The latter also have “problems,” the same in principle as those of the neurotic, but because practically everybody has them and knows them they are counted as “contemporary questions,” while in their neurotic form they appear rather as biographical *curiosa*. The treatment of the neuroses has naturally confronted doctors with many questions they could not answer by medical means alone. They had to resort to an academic psychology that had never concerned itself with living human beings, or only under restrictive experimental conditions which were a direct hindrance to the natural expression of the psyche as a whole. Since the doctors received no help from outside (with the exception of a few philosophers like C. G. Carus, Schopenhauer, Eduard von Hartmann, Nietzsche), they saw themselves compelled to build up a medical psychology of real human beings. The essays in this volume bear witness to these efforts.

March 1959

FOREWORD TO ALDRICH: “THE PRIMITIVE MIND AND MODERN CIVILIZATION”[1]

[1296] The author of this book, who studied analytical psychology in Zurich a few years ago, has asked me for a few introductory words to his work. I accede to his request with all the more pleasure as I was not bored but decidedly delighted by reading his book. Books of this kind are often of a very dry, though learned and useful, character. There are indeed not a few of them, because, together with the discovery of a new empirical psychology, the modern scientific mind has become interested in what were formerly called “curiosités et superstitions des peuples sauvages,” a field formerly left to missionaries, traders, hunters, and geographical and ethnographical explorers. A rich harvest of facts has been gleaned and gathered up in long rows of volumes even more formidable than Sir James Frazer’s *Golden Bough* series. As everywhere in the science of the nineteenth century, the collection type of method has prevailed, producing an accumulation of disconnected and undigested facts which in the long run could not fail to make a survey almost impossible. Such an ever increasing accumulation, here as well as in other sciences, has hindered the formation of judgment. It is a truism that there are never facts enough, but, on the other hand, there is only one human brain, which only too easily gets swamped by the boundless flood of material. This happens particularly to the specialist, whose mind is trained to a careful consideration of facts. But when judgment is required the mind must turn away from the impression of the facts and should lift itself to a higher level from which a survey becomes possible. One might almost say: as a rule the higher standpoint is not given by the specialized science but by a convergence of viewpoints from other scientific realms.

[1297] Thus the understanding of primitive psychology would have remained an almost insoluble task without the assistance of mythology, folklore, history, and comparative religion. Sir James Frazer’s work is a splendid example of this composite method. It is rather astonishing that among the co-operating sciences psychology seems to be lacking. It was, however, not completely absent. Among the many who tried to tackle the problems of the primitive mind, no one has done so without psychology. But the psychological point of view employed by each investigator was his own—just as if there were only one psychological standpoint, i.e., the author's own psychology. Seen from Tylor's point of view, animism is quite obviously his individual bias. Lévy-Bruhl measures primitive facts by means of his extremely rational mind. From his standpoint it appears quite logical that the primitive mind should be an "état prélogique." Yet the primitive is far from being illogical and is just as far from being "animistic." He is by no means that strange being from whom the civilized man is separated by a gulf that cannot be bridged. The fundamental difference between them is not a difference in mental functioning, but rather in the premises upon which the functioning is based.

[1298] The reason why psychology has hitherto rendered so little assistance to the explorer in the vast field of primitive psychology is not so much the natural disinclination of the specialist to appeal to principles outside his particular domain as the fact that a psychology which would be really helpful simply did not exist. The psychology that is needed must be a psychology of the complex functions, i.e., a psychology that does net reduce the complexities of the mind to their hypothetical elements, which is the method of experimental or physiological psychology. The first attempt at a complex psychology was made by Freud, and his essay *Totem and Taboo* was one of the first direct contributions of the new psychology to the investigation of the primitive mind. It matters little that his attempt is nothing more than an application of his sexual theory, originally gleaned from pathological minds. His essay nevertheless demonstrates the possibility of a *rapprochement* between psychology and the problem of the primitive mind. Sometime before the work above mentioned, I undertook a similar task[2] that eventually led me to the primitive mind, but with a very different method. While Freud's method consisted in the application of an already existing theory, my method was a comparative one. I have reason to believe that the latter yields better results. The main reason is that our new psychology is in no way advanced enough to present a theory of the mind that would have universal application. With modesty we can claim no more than the possession of sound facts and some rules of thumb which might prove useful in the attempt to master the problem of the primitive mind.

[1299] Mr. Aldrich, I observe, has made use of his studies in analytical psychology, to the advantage of his research. His sane and balanced opinions, equally distant from the Charybdis of dry empirical enumeration of facts and the Scylla of deduction from arbitrary premises, owe their vitality and colour in no small measure to a consideration of analytical psychology. I am sure that the analytical psychologist will welcome Mr. Aldrich's book as one of the most vivid and clear presentations of the primitive mind in its relation to civilized psychology. I may also express the hope that the co-operation of the psychologist will prove its usefulness to all students of primitive psychology who approach their subject from the ethnological standpoint.

PRESS COMMUNIQUÉ ON VISITING THE UNITED STATES[1]

September 1936

[1300] The reason why I come to the United States is the fact that Harvard University has bestowed upon me the great honour of inviting me to its Tercentenary Celebration. Being a psychopathologist as well as psychologist, I have been asked to participate in a symposium about "Psychological Factors Determining Human Behaviour."[2]

[1301] This is not my first visit to the United States, though my last visit dates back as far as 1924. I am eagerly looking forward to observing the changes which the last eventful decade has brought to public as well as to private life over here and to compare them with those of our own profoundly upset Europe. It is my sincere hope to find more common sense, more social peace, and less insanity in the United States than in the old countries. As a psychologist I am deeply interested in mental disturbances, particularly when they infect whole nations. I want to emphasize that I despise politics wholeheartedly: thus I am neither a Bolshevik, nor a National Socialist, nor an Anti-Semite. I am a neutral Swiss and even in my own country I am uninterested in politics, because I am convinced that 99 per cent of politics are mere symptoms and anything but a cure for social evils. About 50 per cent of politics is definitely obnoxious inasmuch as it poisons the utterly incompetent mind of the masses. We are on our guard against contagious diseases of the body, but we are exasperatingly careless when it comes to the even more dangerous collective diseases of the mind.

[1302] I make this statement in order to disillusion any attempt to claim me for any particular political party. I have some reason for it, since my name has been repeatedly drawn into the political discussion, which is, as you best know, in a feverish condition actually. It happened chiefly on account of the fact that I am interested in the undeniable differences in national and racial psychology, which chiefly account for a series of most fatal misunderstandings and practical mistakes in international dealings as well as in internal social frictions. In a politically poisoned and overheated atmosphere the sane and dispassionate scientific discussion of such delicate, yet most important problems has become well-nigh impossible. To discuss such matters in public would be about as successful as if the director of a lunatic asylum were to set out to discuss the particular delusions of his patients in the midst of them. You know, the tragicomical thing is that they are all convinced of their normality as much as the doctor himself of his own mental balance.

[1303] It will soon be thirty years since my first visit to the United States. During this time I watched the tremendous progress of the country, and I learned to appreciate also the enormous change America has undergone and is still undergoing, namely the transition from a still pioneering mood to the very different attitude of a people confined to a definite area of soil.

[1304] I shall spend my time chiefly at Harvard, and after a short visit to the museums of New York I intend to sail again in the first days of October.

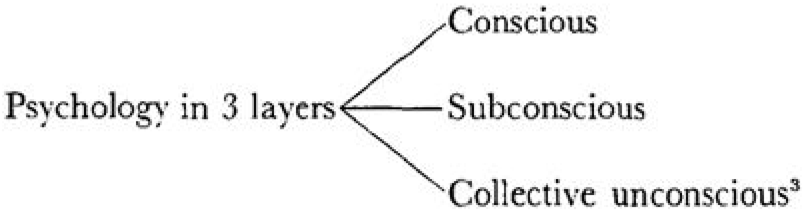
PSYCHOLOGY AND NATIONAL PROBLEMS[1]

[1305] The question of psychology and national problems with which I have been asked to deal is indeed of some topicality. It is a question, however, that would not have been asked before the World War. People in general were then not aware of any disturbance in the mental or psychic atmosphere of Europe, although the psychological critic or a philosopher of the antique style could have found enough to talk about. It was a prosperous world then and one which believed in what the eye saw and the ear heard and in what rationalism and philosophical positivism had to say. Even the rational possibility of a great war seemed, in spite of historical evidence, a far-fetched and artificial nightmare, nothing more than a theoretical scarecrow occasionally conjured up by politicians and newspapers when they had nothing else to say. One was thoroughly convinced that international, financial, commercial, and industrial relations were so tightly knit together as to exclude the mere possibility of a war. The Agadir incident[2] and similar gestures seemed to be mere pranks of a psychopathic monarch, otherwise safely enmeshed in an international network of financial obligations, whose gigantic proportions were supposed to rule out any attempts of a serious military nature. Moreover the fabulous development of science, the high standard of public education in most European countries, and a public opinion organized as never before in history, allowed European humanity to believe in man's conscious achievements, in his reason, intelligence and will-power. It almost appeared as if man and his ideals were going to possess the earth and rule it wisely for the welfare of all peoples.

[1306] The World War has shattered this dream and has crushed most of the ideals of the preceding era. In this postwar mood originated the doubt: Is everything right with the human mind? One began to question its sanity because thinking people grew more and more astonished at all the things humanity could do. The benevolent god of science that had done such marvellous things for the benefit of man had uncovered his dark face. He produced the most diabolical war machinery, including the abomination of poison gases, and human reason got more and more obscured by strange and absurd ideas. International relations turned into the most exaggerated nationalism, and the very God of the earth, the *ultima ratio* of all things worldly—money—developed a more and more fictitious character never dreamt of before. Not only the security of the gold standard but also that of treaties and other international arrangements, already badly shaken by the War, did not recover but became increasingly illusory. Nearly all major attempts at reduction of armaments and at stabilization of international finances went wrong. Slowly it dawned upon mankind that it was caught in one of the worst moral crises the world had ever known.

[1307] It is natural enough that in many quarters the doubt arose as to whether the human mind had not changed. It did not appear preposterous any more to assume that possibly there were peculiar psychological reasons for all these disquieting developments which otherwise could hardly be explained. Many people wondered what psychology would have to say about the world situation. Such questions, as a matter of fact, have often been put to me, and I must confess I always felt not only definitely uncomfortable but singularly incompetent to give a satisfactory answer. The subject is really too complicated. The predominant and immediate reasons for the crisis are factors of an economic and political nature. Inasmuch as these are activities of the human mind they should be subject to certain psychological laws. But the economic factors especially are not wholly psychological in character; they depend to a great extent on conditions that can hardly be linked up with psychology. In politics on the other hand psychology seems to prevail, but there is an ultimate factor of numbers, of sheer force and violence, that corresponds to a caveman’s or an animal’s psychology rather than to anything human. There is no psychology yet of such infinitely complex matters as economics or politics. It is still quite questionable whether there is any hope at all that psychology can be applied to things due to non-psychological factors. I don’t consider myself competent to deal with the ultimate meaning of our world crisis. There are certain sides to it, however, that possess a definitely psychological aspect, offering an opportunity for comment. It seems to be within the reach of contemporary psychology to produce a certain point of view at least.

[1308] Before entering upon this subject I want to say a few words about psychology in general:



[1309] Having given you a short account of what I understand psychology consists of, let me turn now to our subject. First of all a negative statement: I exclude from psychological consideration the strictly economic and political aspect of present-day events. I am doing this because they are, partly at least, non-psychological. Whatever the psychological reasons for the Great War may have been, they transcend my psychological competence. I shall concern myself chiefly with the psychological situation brought about by the War. That there is a so-called psychological situation at all appears to be borne out by a great number of phenomena which we have to call symptoms. You call a certain phenomenon a symptom when it is obvious that it does not function as a logical means to an end but rather stands out as a mere result of chiefly causal conditions without any obvious purposiveness. Thus the yellow colour of the skin in a case of jaundice is a phenomenon with no purposiveness and we therefore call it a symptom, as contrasted with the war-paint of a Red Indian which is a purposive part of the war ceremonial. Or a man drives a nail into the wall and we ask him why he is doing it; if he answers that it is to hang his coat there, then what he does is purposive because it makes sense. But if he answers that it is because he happened to hold a hammer and a nail in his hands, then his action is a symptom, or at least he wants it to appear as such.

[1310] Likewise we could imagine mass organizations without the Roman salute, lictor bundles, swastikas, neo-paganism, and other paraphernalia because our political parties as well as Standard Oil or Dutch Shell can do without them. Therefore it appears to us as if such peculiarities were chiefly symptoms of a particular causal condition of the mind. On the other hand we know that symbols and ceremonies mainly occur in religious organizations where it is indeed a matter of a peculiar mental state. Of course if you are in that frame of mind you would not talk of symptomatology. On the contrary, you would call those peculiarities purposive and meaningful, because to you they appear to serve a definite end. As long as one is within a certain phenomenology one is not astonished and nobody wonders what it is all about. Such philosophical doubt only comes to the man who is outside the game.

[1311] The countries where the most remarkable symptoms occur are chiefly those that have been actually at war and have therefore found themselves afterwards in a state of appalling misery and disorder. I mean particularly Russia, Germany, Austria, and Italy. No matter what the cause, misery is a definite psychological condition characterized by definite emotions, such as depression, fear, despair, insecurity, unrest, and resentments of every description.

[1312] Since our empirical psychology is based entirely on the experience of individual cases, our argument must necessarily start from the individual. This leads us to the question: What will an individual do when under the strain of acute misery? There is a positive and a negative reaction to such a condition:

[. *Positive*. A greater effort is called forth. The individual will show more strength and will-power and will try to overcome the obstacle or the cause of misery through physical, intellectual, and moral effort. It will be an entirely conscious and rational attempt supported by all the means at an individual’s disposal. If the strength of *one* individual is not sufficient he will seek the help of others; perhaps a greater number of individuals will form some sort of organization in order to remove the cause of suffering. If such an ultimate attempt fails, or if an individual is too weak from the start to show fight, then a negative reaction takes place.

[I. *Negative*. Instead of suitable measures of defence, and instead of a concentration of energy, of efforts of the will, and of all the rational ways and methods applicable to such a condition, an emotional reaction will take place. Emotional reaction always denotes an inferior adjustment. This does not necessarily mean that the adjustment is ineffectual. It merely denotes that, if the individual comes through successfully, the success is due to the fact that he has been passively carried through on the crest of an emotional wave rather than by conscious and deliberate effort of the will. In other words the success has been reached in a primitive and inferior way, in the main through a merely instinctive reaction. But more often the emotional reaction is not successful just because it is too primitive and therefore a maladjustment to a perhaps highly complicated situation. In either case the individual is passive and he is more the object of the emotion than its subject. The emotional reaction as a rule consists of depression, fear, and even panic. Emotional conditions always call up instinctive reactions. The hierarchy of human reason becomes weakened and disintegrated, leaving a door open for the intrusion of primitive instinctive forces. *Emotional reaction always means regression*. The first effect of regression is as a rule the reawakening of infantile methods and attitudes. People under the influence of fear and despair very often become infantile, exaggeratedly helpless and demoralized.[4] Helplessness and panic also lead to group formation, or rather to a clustering together in masses for the sake of gregarious security.

[1313] Group formation under the influence of panic cannot be called an organization because it is not an attempt based on reason and will but on a fundamentally emotional movement. It is an accumulation rather than an organization. Such group formations all show unmistakable traces of infantile and archaic psychology, infantile inasmuch as they always look for the father, and archaic inasmuch as the father-image appears in a mythological setting. It seems to be unavoidable that such group formations regress to primitive tribal associations that are held together on the one hand by a chief or medicine-man, and on the other by a sort of mystical doctrine, the tribal teaching.

[1314] We turn now to the question: What would a nation do when in a state of psychological misery? Since a multitude of people or a nation is nothing but an accumulation of individuals, its psychology is likewise an accumulation of individual psychologies. The individual psyche, however, is characterized by individual differences, partly congenital, partly acquired. Nearly every individual shows certain specific achievements which add to his relative uniqueness. On the other hand each individual is partly similar to any other, a fact that produces the aspect of human equality. Thus individuals are like each other inasmuch as they have qualities in no way different from those of others, but unlike each other inasmuch as they develop qualities and achievements that cannot be compared with those of other people. Whatever people have in common can accumulate in a group formation, but their individual achievements never accumulate—rather they extinguish each other. Thus a large group, considered as *one* being, exhibits merely the traits common to all people but none of their individual achievements. The traits common to all people consist chiefly of instinctual qualities; these are of a relatively primitive character and indubitably inferior in comparison with the mental level of most of the members of the group. Thus a hundred intelligent people together make one hydrocephalus.

[1315] The psychology of masses is always inferior, even in their most idealistic enterprises. The whole of a nation never reacts like a normal modern individual, but always like a primitive group being. Therefore masses are never properly adjusted except on very primitive levels. Their reactions belong to our second category—the negative form. Man in the group is always unreasonable, irresponsible, emotional, erratic, and unreliable. Crimes the individual alone could never stand are freely committed by the group being. A society woman would rather die than appear at a dinner in an obscene dress, but if it were the fashion in the group she would not hesitate for a second to put on the most shocking monstrosity. Think for a moment of the famous *cul de Paris* that embellished the youth of our older generation. And men are no better. The larger an organization the lower its morality. The leader of a great religious movement, when caught out in a lie, said, “Oh! for Christ you may even lie.”

[1316] Nations being the largest organized groups are from a psychological point of view clumsy, stupid, and amoral monsters like those huge saurians with an incredibly small brain. They are inaccessible to reasonable argument, they are suggestible like hysterical patients, they are childish and moody, helpless victims of their emotions. They are caught in every swindle, called slogans, they are stupid to an amazing degree, they are greedy, reckless, and blindly violent, like a rhino suddenly aroused from sleep. They persevere in every nonsense, in every emotion and resentment, in every prejudice, far beyond the psychological moment, and they get ensnared by the cheapest of all obvious tricks. Most of the time they live in dreams and primitive illusions usually rigged out as “isms.” As long as they can feed on open ground in an undisturbed way they are sleepy and harmless. But if their food gets scarce and they begin to migrate and to encroach upon neighbouring territory, they resort to violence. They are not to be convinced that human beings have evolved much better methods in many thousands of years and that these individual men believe in reason and intelligence.

[1317] Monster groups have a natural leaning to leaders. But a leader always means a group within the nation, and such a group is more greedy and eats more than the other groups it leads. And as all greedy monsters are jealous they get rid of their leaders and call the new condition a democracy, in which nobody rules and nobody is ruled. The logic of this procedure closely resembles the story of the man who got stranded on an uninhabited island. The first thing he did was an act of statesmanship: he called himself a democracy and consequently felt extraordinarily free and in full possession of all political rights.

[1318] Even a group being can’t help noticing that in living in a democracy you run your head against remarkably unintelligent restrictions of freedom, imposed upon each free, self-ruling citizen by an invisible, wholly legendary being called the “State.” When a monster group first called itself a “democracy” it surely did not think that its former ruler, now dethroned, would turn into a ghost. Yet he did. He became the State.

[1319] The State is the psychological mirror-image of the democracy monster. As the nation always rises as *one man*, the State is just as good as one man. As a matter of fact it is quite a person, of unlimited means, more exacting than any tyrant ever was, greedy to the limit and biologically dangerous. It, the State, is not like a Roman Caesar, enslaving prisoners of war on the lower strata of the population; it squeezes its contributions out of the most vital and most gifted individuals of its domain, making slaves of them for its own wasteful devices. It does not know that energy only works when accumulated. Its energy is *money*. It taps all carefully prepared and studied accumulations of this energy and dissipates it so that it becomes ineffectual, thereby causing an artificial entropy.

[1320] It seems that "democracy" was a suitable name only in the very youth of the State-ghost. In order to support its boundless ambitions two brand-new "isms" had to be invented: Socialism and Communism. They enhance its ultra-democratic character to an extraordinary degree: the man on the lonely island is now the communistic social democracy. Together with these illusions goes another helpful procedure, the hollowing out of money, which in the near future will make all savings illusory and, along with cultural continuity, guaranteed by individual responsibility. The State takes over responsibility and enslaves every individual for its own ridiculous schemes. All this is done by what one calls inflation, devaluation, and, most recently, "dilution," which you should not mix up with the unpopular term "inflation." Dilution is now the right word and only idiots can't see the striking difference between this concept and inflation. Money value is fast becoming a fiction guaranteed by the State. Money becomes paper and everybody convinces everybody else that the little scraps are worth something because the State says so.

[1321] I am by no means sure that what I am saying is not fictitious too. I don't know exactly what has gone wrong, but I have a strong and most uncomfortable feeling that something has gone wrong and that it is even getting worse. I am also certain that I am not the only one to experience such a queer feeling. There must be hundreds of people who have lost their confidence in the direction in which things are apparently moving. As group beings we are all befogged in the same way, but as individuals we might just as well apply as much of our psychiatric knowledge as seems to befit the peculiar symptomatology of our bewildering epoch.

[1322] As I mentioned at the beginning, we find the symptoms chiefly in those nations that have been mangled the most by the war beast. There is for instance the German case. As far back as 1918 I published a paper[5] in which I called the attention of my contemporaries to an astounding development in the German edition of the collective unconscious. I had caught hold of certain collective dreams of Germans which convinced me that they portrayed the beginning of a national regression analogous to the regression of a frightened and helpless individual, becoming first infantile and then primitive or archaic. I saw Nietzsche's "blond beast" looming up, with all that it implies. I felt sure that Christianity would be challenged and that the Jews would be taken to account. I therefore tried to start the discussion in order to forestall the inevitable violence of the unconscious outburst of which I was afraid—though not enough, as subsequent events have unfortunately shown only too clearly. I don't need to say that I was not heard at all. The fog of war-psychology was just too dense.

[1323] Germany was the first country to experience the miracles worked by democracy's ghost, the State. She saw her money becoming elastic and expanding to astronomical proportions and then evaporating altogether. She experienced all in one heap what the ghosts of other democracies are trying to do to us in a sort of slow-motion picture, probably hoping that nobody understands the eyewash. Germany got it right in the neck and there was no joke about it. The whole educated middle class was utterly ruined, but the State was on top, putting on more and more of the "-istic" rouge as war-paint. The country was in a condition of extreme misery and insecurity, and waves of panic swept over the population. In an individual case these are the symptoms of an oncoming outburst. Any such outburst would bring up archaic material, archetypes that join forces with the individual as well as with the people. There is some teleology about this: it creates strength where there was weakness, conviction instead of doubt, courage instead of fear. But the energy needed to bring about such a transformation is taken away from many old values and the success gained is paid for dearly. Such an outburst is always a regression into history and it always means a lowering of the level of civilization.

[1324] Through Communism in Russia, through National Socialism in Germany, through Fascism in Italy, the State became all-powerful and claimed its slaves body and soul. Democracy became its own mirror-image, its own ghost, while the ghost became appallingly real, an all-embracing mystical presence and personality that usurped the throne a pious theocratic Christianity had hoped God would take. The old totalitarian claim of the *Civitas Dei* is now voiced by the State: one sheep as good as another and the whole herd crowded together, guarded by plain-clothed and uniformed wolf-dogs, utterly deprived of all the rights which the man on the island who called himself a democracy had dreamt of. There are no rights left, only duties. Every source of energy, industry, commerce, money, even private enterprise, is sucked up into the new slave-owner, the State.

[1325] And a new miracle happened. Out of nowhere certain men came, and each of them said like Louis XIV, “L’état c’est moi.” They are the new leaders. The State has proved its personal reality by incarnating itself in men that came from Galilee, inconspicuous nobodies previously, but equipped with the great spirit voice that cowed the people into soundless obedience. They are like Roman Caesars, usurpers of empires and kingdoms, and like those incarnations of a previously invisible deity devoutly invoked and believed in by everybody. They are the State that has superseded the medieval theocracy.

[1326] This process of incarnation is particularly drastic in Hitler’s case. Hitler himself as an ordinary person is a shy and friendly man with artistic tastes and gifts. As a mere man he is inoffensive and modest, and has nice eyes. But he comes from Braunau, a little town that has already produced two famous mediums—the Schneider brothers. (Harry Price has written a book about one of them.[6]) Hitler is presumably the third and the most efficient medium from Braunau. When the State-spirit speaks through him, he sends forth a voice of thunder and his word is so powerful that it sweeps together crowds of millions like fallen autumn leaves.

[1327] There is obviously no power left in the world and particularly no State-loving “-ism” which is capable of resisting this incredible force. Of course you will say, as everybody does, “One must be a German to understand such miracles.” Yes, this is just as true as that you must be an Italian to understand the mythology of the Fascio, or a Russian to appreciate the charms of Stalin’s paternal regime. Of course you can’t understand those funny foreigners, Sir Oswald Mosley and Colonel de la Rocque[7] being still babes in arms. But if you carefully study what

President Roosevelt is up to and what the famous N.R.A.[8] meant to the world of American commerce and industry, then you get a certain idea of how near the great State in America is to becoming Roosevelt's incarnation. Roosevelt is the stuff all right, only the circumstances are not bad enough. Great Britain seems to be pretty conservative, yet you have a taxation which makes the great estates uninhabitable. That is exactly how things began in Italy. You have devalued your money, this is the second step. You could not stop the boastful march of Roman legions through the bottleneck of Suez, and Sir Samuel[9] meekly and wisely took all the air out of that magnificent gesture of a proud British fleet adorning the entrance to Italy's triumph. This was the third step. England comes perhaps so late into the paradise of a new age that she arrives there with many old-world values well preserved by sheer lack of interest. Being Swiss I heartily sympathize with this attitude. Knowing of nothing that would be better, we hang on to the rear of events and muddle along as we have been used to do for six hundred years. We can't imagine our dictator yet, but already an unfortunate majority believes in the mighty ghost to whom we have sacrificed all our railways and the gold standard on top of that.

[1328] The incarnation of the State-ghost is no mean affair. It competes with famous historical parallels; it even challenges them. Just as Christianity had a cross to symbolize its essential teaching, so Hitler has a swastika, a symbol as old and widespread as the cross. And just as it was a star over Bethlehem that announced the incarnation of God, so Russia has a red star, and instead of the Dove and the Lamb a hammer and sickle, and instead of the sacred body a place of pilgrimage with the mummy of the first witness. Even as Christianity challenged the Roman Imperium, enthroned ambitious Roman bishops as *Pontifices Romani*, and perpetuated the great Empire in the theocracy of the Church and the Holy Roman Empire, so the Duce has produced once more all the stage scenery of the Imperium which will soon reach from Ethiopia to the Pillars of Hercules as of old.

[1329] Again it is Germany that gives us some notion of the underlying archetypal symbolism brought up by the eruption of the collective unconscious. Hitler's picture has been erected upon Christian altars.

There are people who confess on their tombstones that they died in peace since their eyes had beheld not the Lord but the Führer. The onslaught on Christianity is obvious; it would not even need corroboration through a neo-pagan movement incorporating three million people. This movement can only be compared with the archetypal material exhibited by a case of paranoid schizophrenia. You find in neo-paganism the most beautiful Wotanistic symbolism, Indogermanic speculation, and so on. In North Germany there is a sect that worships Christ in the form of a rider on a white horse.[10] It does not go as far as collective hallucinations, though the waves of enthusiasm and even ecstasy are running high.

[1330] Nations in a condition of collective misery behave like neurotic or even psychotic individuals. First they get dissociated or disintegrated, then they pass into a state of confusion and disorientation. As it is not a question of psychotic disintegration in an individual case, the confusion affects mainly the conscious and subconscious layers but does not touch the fundamental instinctual structure of the mind, the collective unconscious. On the contrary, the confusion in the top layers produces a compensatory reaction in the collective unconscious, consisting of a peculiar personality surrogate, an archaic personality equipped with superior instinctive forces. This new constellation is at first completely unconscious, but as it is activated it becomes perceptible in the form of a projection. It is usually the doctor treating a patient who unwittingly assumes the role of the projected figure. The mechanism of this projection is the transference. By transference the doctor appears in the guise of the father, for instance, as that personality who symbolizes superior power and intelligence, a guarantee of security and a protection against overwhelming dangers. So long as the disintegration has not reached the deeper layers, the transference will not produce more than the projection of the father-image. But once the confusion has stirred up these unknown depths, the projection becomes more collective and takes on mythological forms. In this case the doctor appears as a sort of sorcerer or saviour. With actively religious persons the doctor would be superseded by an activated image of Christ or by that of an invisible divine presence.

[1331] Mystical literature abounds in descriptions of such experiences. You also find detailed records in William James' *Varieties of Religious Experience*. But if you observe the dreams of such patients you will find peculiar symbolic images, often long before the patients themselves become conscious of any so-called mystical experiences. These images always show a specific pattern: they are circular or square, or like a cross or a star, or are composites of such elements. The technical term I use for such figures is the *mandala*, the Sanskrit word for "circle."[11] The corresponding medieval Latin term is the *circulus quadratus* or *rosa*. In Hindu literature you also find the terms *padma* (lotus) and *chakra*, meaning the flowerlike centres of different localizations of consciousness.[12]

[1332] Because of its circular form the mandala expresses roundness, that is, completeness or integration. In Tantrism and Lamaism it is used as an instrument of concentration and as a means of uniting the individual consciousness, the human ego-personality, with the superior divine personality of the non-ego, i.e., of the unconscious. Mandalas often have the character of *rotating* figures. One such figure is the swastika. We may therefore interpret it as a projection of an unconscious collective attempt at the formation of a compensatory unified personality. This unconscious attempt plays a great role in the general personification of the State. It gives it its ghostlike quality and bestows upon it the faculty of incarnating itself in a human personality. The almost personal authority and apparent efficiency of the State are, in a sense, nothing else than the unconscious constellation of a superior instinctual personality which compensates the obvious inefficiency of the conscious ego-personality.

[1333] When Nietzsche wrote his prophetic masterpiece, *Thus Spake Zarathustra*, he certainly had not the faintest notion that the superman he had created out of his personal misery and inefficiency would become a prophetic anticipation of a Führer or Duce. Hitler and Mussolini are more or less ordinary human beings, but ones who, curiously enough, assume that they themselves know what to do in a situation which practically nobody understands. They seem to have the superhuman courage or the equally superhuman recklessness to shoulder a responsibility which apparently nobody else is willing or able to carry. Only a superman could be entrusted with faculties that are equal to the difficulties of the actual situation. But we know that mystical experience as well as identification with an archetypal figure lend almost superhuman force to the ordinary man. Not in vain do the Germans call their Führer "our Joan of Arc." He is very much the character that is open to unconscious influences. I am told that Hitler locked himself in his room for three days and nights when his whole staff beseeched him not to leave the League of Nations. When he appeared again he said without any explantion, "Gentlemen, Germany must leave the League." This story sounds as if German politics were not made but revealed.

[1334] Hitler's unconscious seems to be female. Mussolini's Latin and very masculine temperament does not allow a comparison with Hitler. As an Italian he is imbued with Roman history, and indeed in every gesture he betrays his identity with the Caesar. It is most characteristic what rumour has to say about him. I am told—I don't know whether there is any truth in it or not—that not very long ago he appeared at a reception in the Roman toga and the golden laurel wreath of the Caesar, creating a panic that could only be hushed up by the most drastic measures. Even if this is a mere legend it shows beautifully how rumour interprets the Duce's role. Gossip is surely a bad thing, but I confess I always find it interesting because it is often the only means of getting information about a public figure. Gossip does not need to be true in order to be of value. Even if it gives an entirely twisted picture of a man, it clearly shows the way in which his persona, that is his public appearance, functions. The persona is never the true character; it is a composite of the individual's behaviour and of the role attributed to him by the public.[13] Most of the biography of a public figure consists of the persona's history and often of very little individual truth. Well, this is the penalty the man in the limelight has to pay!

[1335] It seems as if in nearly all the countries of Europe the gulf between the right and left wing were widening, in so far as these countries are not already Fascist. It is so in Spain and it soon might be as obvious in France. Since Socialism and Communism merely enhance the attributes of democracy, i.e., of a Constitution where there is a ruler without subjects and subjects without a ruler, they only serve to hollow out the meaning of Parliament, of government, of money, and of the so-called rights of the free citizen. The only possible synthesis seems to be the eventual incarnation of the State-ghost in a superman with all his mythological paraphernalia. Recently Ramsay MacDonald made a very clear statement. Speaking of the Labour Party he literally said: "Its members are a flock without a shepherd and with a plethora of sheep-dogs in disagreement with one another about the fold in which the flock should be penned. Is it not time for Labour policy to be realistic? By its fumbling with the cardinal issues of defence and peace, it is casting doubt on the competence of democracy and playing straight into the hands of Fascism. The problems of modern life are too urgent to remain the playthings of shortsighted partisans."[14]

[1336] It is doubtful whether the European nations would remain for any length of time in the chaotic disorder of the childish Communistic doctrine. They rather revert to type, to a state of enforced order which is nothing else than dictatorship and tyrannical oligarchy. At least this form has come to light even in sluggish Russia, where 170 million people are kept in order by a few million members of the Communist Party. In Italy it is the Fascio, and in Germany the S.S. is fast on the way to becoming something like a religious order of knights that is going to rule a colony of sixty million natives. In the history of the world there has never been a case where order was established with sweet reasonableness in a chaos. Chaos yields only to enforced order.

[1337] In the dictator and his oligarchical hierarchy the State-ghost appears in the flesh. Yet such statesmen are human beings who assume power over their fellow beings, and instantly the latter feel suppressed, which they did not feel as long as they were called democrats. Of course this State slavery is just as bad as before, but now they remember they might have to say something political and are told to shut up. Then they feel as if something dreadful had happened to them. They don't realize that whatever they talked about in the democracy was just as futile as anything they might talk about now. It is true that democrats talk and socialists talk more and communists beat them all at talk. It is just that sort of thing that has led them to disintegration, and that's why in a condition of enforced order talk comes abruptly to an end.

[1338] Disorder is destructive. Order is always a cage. Freedom is the prerogative of a minority and it is always based on the disadvantage of others. Switzerland, the oldest democracy in the world, calls herself a free country because no foreigner ever enjoyed a liberty to her disadvantage until America and Great Britain went off the gold standard. Since then we have felt like victims. Now we play the same trick on the other countries that hold Swiss bonds (mind you, Switzerland is the third biggest banker in Europe!) and we probably feel better for it. But are we really free? We are weak and unimportant and we try to be so; our style of life is narrow and our outlook hampered not only by ordinary hills but by veritable mountains of prejudice against anything and everybody that exceeds our size. We are locked in the cage of order and we enjoy just enough air not to suffocate. We have one virtue yet: we are modest and our ambitions are small. That is why we can stick to order and why we don't believe much in talk. But our freedom is exceedingly limited—fortunately enough. It may save us from a dictator.

[1339] In continental Europe today, I am afraid it is hardly a question of whether we are going to enjoy more freedom or less. As a matter of fact things have gone so far that soon even the problem of freedom will be obsolete. The question is rather that of "to be or not to be." The dilemma is now between chaos and enforced order. Will there be civil war or not?—that is what we anxiously ask the dark Fates of Europe. I would like to quote here Miguel de Unamuno, one of those Spanish liberals who undermined the traditional order in the hope of creating greater freedom. Here is his most recent confession: "Times have changed. It is not any more a question of Liberalism and Democracy, Republic or Monarchy, Socialism or Capitalism. It is a question of civilization and barbarity. Civilization is now represented in Spain by General Franco's Army."[15]

[1340] Compulsory order seems to be preferable to the terrors of chaos, at all events the lesser of two great evils. Orders, I am afraid, have to be heard in silence.

[1341] But there is a majority of people to whom it seems the most serious matter in the world when they can't talk any more. This appears to be the reason why even the most [ ][16] dictatorships are eventually talked out of existence, and why the senseless and lamentable gamble of politics is meandering its way through history—a sad comedy to the thinking mind and to the feeling heart.

[1342] If we are stumbling into an era of dictators, Caesars, and incarnated States, we have accomplished a cycle of two thousand years and the serpent has again met with its own tail. Then our era will be a near replica of the first centuries A.D., when Caesar was the State and a god, and divine sacrifices were made to Caesar while the temples of the gods crumbled away. You know that thousands in those days turned their eyes away from this visible world, filled with horror and disgust, and adopted a philosophy which healed their souls. Since history repeats itself and the spiral of evolution seemingly returns to the point where it took off, there is a possibility that mankind is approaching an epoch when enough will be said about things which are never what we wish them to be, and when the question will be raised why we were ever interested in a bad comedy.

RETURN TO THE SIMPLE LIFE[1]

What are your views on a return of the Swiss people to the simple life?

[1300] The return to the simple life can be regarded as an unhoped-for piece of good fortune even though it demands considerable self-sacrifice and is not undertaken voluntarily. Thanks to the mass media and the cheap sensationalism offered by the cinema, radio, and newspapers, and thousands of amusements of all kinds, life in the recent past has rapidly been approaching a condition that was not far removed from the hectic American tempo. Indeed, in the matter of divorces, Zurich has already reached the American record. All time-saving devices, amongst which we must count easier means of communication and other conveniences, do not, paradoxically enough, save time but merely cram our time so full that we have no time for anything. Hence the breathless haste, superficiality, and nervous exhaustion with all the concomitant symptoms—craving for stimulation, impatience, irritability, vacillation, etc. Such a state may lead to all sorts of other things, but never to any increased culture of the mind and heart.

Do you think we should turn more and more to the treasures of our culture?

[1344] As the booming book trade in many countries shows, if the worst comes to the worst people will even turn to a good book. Unfortunately, such a decision always needs a compelling external cause. Unless driven by necessity, most people would never dream of "turning to the treasures of our culture." The delusion of steady social improvement has been dinned into them so long that they want to forget the past as quickly as possible so as not to miss the brave new world that is constantly being dangled before their eyes by unreformable world-reformers. Their neurasthenic craving for the latest novelty is a sickness and not culture. The essence of culture is continuity and conservation of the past; craving for novelty produces only anti-culture and ends in barbarism. The inevitable outcome is that eventually the whole nation will yearn for the very culture which, owing to the delusion of better conditions in the future (which seldom if ever materialize), has almost (or entirely) disappeared. Unfortunately our world, or perhaps the moral structure of man, is so constituted that no progress and no improvement are consistently good, since sooner or later the corresponding misuse will appear which turns the blessing into a curse. Can anyone seriously maintain that our wars are in any way “better” than those of the Romans?

[1345] The craze for mass organization wrenches everyone out of his private world into the deafening tumult of the market-place, making him an unconscious, meaningless particle in the mass and the helpless prey of every kind of suggestion. The never failing bait is the alleged “better future,” which prevents him from adapting himself to the actual present and making the best of it. He no longer lives in the present and *for* the future, but—in a totally unrealistic way—already in the future, defrauded of the present and even more of the past, cut off from his roots, robbed of his continuity, and everlastingly duped by the mocking *fata morgana* of a “better future.” A tremendous disillusionment is needed to save people from wishful thinking and bring them back to the sound bases of tradition, and to remind them of the blessings of a spiritual culture which the “age of progress” has destroyed with its nihilistic criticism. One has only to think of the spiritual devastation that has already been wrought by materialism, the invention of would-be intellectuals equipped with truly infantile arguments. It will be difficult to get rid of the kind of thinking whose very stupidity makes it so popular.

Do you believe that happiness is found not in material but in spiritual things?

[1346] To remove the ideal from the material to the spiritual world is a tricky business, because material happiness is something tangible (if ever it is attained), and the spirit an invisible thing which it is difficult to find or to demonstrate. It is even supposed that most of what goes by the name of “spirit” is so much empty talk and a clattering of words. An attainable sausage is as a rule more illuminating than a devotional exercise; in other words, to find happiness in the spirit one must be possessed of a “spirit” to find happiness in. A life of ease and security has convinced everyone of all the material joys, and has even compelled the spirit to devise new and better ways to material welfare, but it has never *produced* spirit. Probably only suffering, disillusion, and self-denial do that. Anyone who can live under such stresses and still find life worth while already has spirit, or at least has some inklings of it. But at all times there are only very few who are convinced from the bottom of their hearts that material happiness is a danger to the spirit, and who are able to renounce the world for its sake.

[1347] I hope, therefore, that the scourge which is now lashing Europe will bring the nations to realize that this world, which was never the best of all possible worlds in the past, will not be so in the future either. It is, as always, compounded of day and night, light and darkness, brief joys and abiding sorrows, a battleground without respite or peace, because it is nothing but the melting-pot of human desires. But the spirit is another world within this world. If it is not just a refuge for cowards, it comes only to those who *suffer* life in this world and accept even happiness with a gesture of polite doubt. Had the Christian teachings not been so utterly forgotten in the face of all this technological “progress,” the avalanches that now threaten to engulf Europe would never have started rolling. Belief in this world leaves room neither for the spirit of Christianity nor for any other good spirit. The spirit is always hidden and safe from the world, an inviolable sanctuary for those who have forsworn, if not the world, at least their belief in it.

Can there be an optimism of austerity?

[1348] Instead of “optimism,” I would have said an “optimum” of austerity. But if “optimism” is really meant, very much more would be required, for “austerity” is anything but enjoyable. It means real suffering, especially if it assumes acute form. You can be “optimistic” in the face of martyrdom only if you are sure of the bliss to come. But a certain minimal degree of austerity I regard as beneficial. At any rate, it is healthier than affluence, which only a very few people can enjoy without ill effects, whether physical or psychic. Of course one does not wish anything unpleasant for anybody, least of all oneself, but, in comparison with other countries, Switzerland has so much affluence to spare (however honourably earned) that we are in an excellent position to give some of it away. There is an "optimum" of austerity which it is dangerous to exceed, for too much of it does not make you good but hard and bitter. As the Swiss proverb trenchantly puts it: "Behind every rich man stands a devil, and behind every poor man two."

[1349] Since "optimism" seems to have been meant, and hence an optimistic attitude towards something unpleasant, I would add that in my view it would be equally instructive to speak of a "pessimism" of austerity. Human temperaments being extremely varied, indeed contradictory, we should never forget that what is good for one man is harmful for another. One man, because of his inner weakness, needs encouragement; another, because of his inner assurance, needs the restraint of austerity. Austerity enforces simplicity, which is true happiness. But to live simply, without regret and bitterness, is a moral task which many people will find very hard.

Will turning away from material things foster the team-spirit?

[1350] A common need naturally strengthens the team-spirit, as we can see in England at this moment. But the very existence of many moral weaklings increases the danger of selfishness. All extraordinary conditions bring men's badness as well as their goodness to light. However, since the majority of our people may be regarded as morally healthy, there is ground for hope that a common need will cause their virtues to shine more brightly.

[1351] Believing as I do in the virtues and diligence of the Swiss, I am convinced that they have an absolute will to preserve their national independence and are ready to make the heaviest sacrifices. At any rate, the team-spirit in Switzerland is not undeveloped and hardly needs special strengthening. Above all, we do not have those social contrasts between a solid upper crust or party on the one hand and an anonymous mass on the other, which in other countries keep citizens apart. Class conflicts with us are mainly imported from abroad. Instead of pushing the team-spirit artificially to the fore, it seems to me more important to stress the development of the personality, since this is the real vehicle of the team. Faced with the question of *what* a man does, one should never forget *who* is doing it. If a community consists of nothing but trash, then it amounts to nothing, for a hundred imbeciles still do not add up to anything sensible. The noisy and insistent preaching of the team-spirit only causes them to forget that their contribution to society consists of nothing but their own uselessness. If I belong to an organization with 100,000 members it does not prove in the least that I am any good, let alone if there are millions of them. And if I pat myself on the back for being a member, I am merely adding to my non-value the illusion of excessive value. Since, in accordance with the laws of mass psychology, even the best man loses his value and meaning in the mass, it is doubly important for him to be in secure possession of his good qualities in order not to damage the community of which he is a member. Instead of talking so much about the team-spirit it would be more to the point to appeal to the spiritual maturity and responsibility of the individual. If a man is capable of leading a responsible life himself, then he is also conscious of his duties to the community.

[1352] We Swiss believe in quality; let us therefore use our national belief for improving the value of the individual, instead of letting him become a mere drop in the ocean of the community. Self-knowledge and self-criticism are perhaps more necessary for us in Switzerland, and more important for the future, than a great herd of social irresponsibles. In Switzerland we could do nothing anyway with masses welded together and controlled by iron discipline; our country is far too small. What counts with us are the virtues, the stoutheartedness and toughness of the individual who is conscious of himself. In the case of extreme necessity everyone has to do his bit in his allotted place. It is nice to hope for a helper in time of need, but self-reliance is better. The community is not anything good in itself, as it gives countless weaklings a wonderful opportunity to hide behind each other and palm off their own incompetence on their fellows. People are only too willing to expect the community to do what they themselves are incapable of doing, and they hold it responsible when they as individuals fail to fulfil their necessary obligations.

[1353] Although we Swiss do undoubtedly have a fairly well-developed team-spirit, most of our attempts at community are miserable specimens. They grow on stony ground and are divided by thorny hedges. One and all suffer from the Swiss national vices of obstinacy and mistrustfulness—at least, these national qualities are called vices when people get annoyed about them, as very often happens. But from another point of view they could almost be extolled as virtues. It is quite impossible to say how much of our political, intellectual, and moral independence of the powerful world around us we owe to these unpleasant qualities. Fortunately—I am almost inclined to say—their roots penetrate into the deepest recesses of every Swiss heart. We are not easily fooled. How many poisonous infections, how many fantastic ideas may we not have avoided in the course of the centuries thanks to these qualities! The fact that we are in some respects a hundred years behind the times, and that many reforms are desperately overdue, is the price we have to pay for such useful national failings.

[1354] Hence I expect more from the Swiss national character than from an artifically fostered team-spirit, because it has deeper roots in our native soil than an enthusiasm which wanes with the words that conjure it up. It is all very fine to be swept along on a tide of enthusiasm, but one cannot enthuse indefinitely. Enthusiasm is an exceptional state, and human reality is made up of a thousand vulgarities. Just what these are is the decisive thing. If the ordinary Swiss makes very sure that he himself has it good and can summon up no enthusiasm whatever for the joys of having nothing in glorious solidarity with everybody else, that is certainly unromantic—worse, it is selfish, but it is sound instinct. The healthy man does not torture others—generally it is the tortured who turn into torturers. And the healthy man also has a certain amount of goodness which he is the more inclined to expend since he does not enjoy a particularly good conscience on account of his obvious selfishness. We all have a great need to be good ourselves, and occasionally we like to show it by the appropriate actions. If good can come of evil self-interest, then the two sides of human nature have cooperated. But when in a fit of enthusiasm we begin with the good, our deep-rooted selfishness remains in the background, unsatisfied and resentful, only waiting for an opportunity to take its revenge in the most atrocious way. Community at all costs, I fear, produces the flock of sheep that infallibly attracts the wolves. Man's moral endowment is of so dubious a nature that a stable condition seems possible only when every sheep is a bit of a wolf and every wolf a bit of a sheep. The truth is that a society is more secure the more the much maligned instincts can, of their own accord, start off the counterplay of good and evil. "Pure good" and "pure evil" are both superhuman excesses.

[1355] Although there is naturally no need to preach self-interest, since it is omnipresent, it should not be needlessly slandered; for when the individual does not prosper neither does the whole. And when he is driven to unnatural altruism, self-interest reappears in monstrous, inhuman form—"changing shape from hour to hour, I employ my savage power"[2]—for the instincts cannot be finally suppressed or eradicated. Excessive sacrifice of the individual for the sake of the community makes no sense in our case anyway, since, our country being so small, we are in no position to assert our self-interest in nationalistic form, that is, by the conquest of foreign countries.

[1356] In sober scepticism as opposed to propaganda talk, in sure instinct and closeness to nature, in self-limitation grounded in self knowledge, I see more health for our Fatherland than in fervent speeches about regeneration and hysterical attempts at a reorientation. Sooner or later it will be found that nothing really "new" happens in history. There could be talk of something really novel only if the unimaginable happened: if reason, humanity, and love won a lasting victory.

EPILOGUE TO JUNG: “L’HOMME À LA DÉCOUVERTE DE SON ÂME”[1]

[1357] The fundamental concepts of my psychology have been set forth in the course of this book. Helped by the perceptive translation of M. Cahen-Salabelle, the reader will not have failed to take note that this psychology does not rest on academic postulates, but on my experiences of man, in health and in sickness. That is why it could not be confined to a study of the contents and functions of consciousness: it had to concern itself also with that part of the psyche we call the unconscious. Everything we say about the unconscious should be taken with a grain of salt; we have only indirect evidence for its existence since it is not open to direct observations; whatever conceptions we form of it are but logical deductions from its effects. These deductions possess only a hypothetical validity because it cannot be determined beforehand whether the nature of the unconscious can be adequately grasped by the conscious mind. I have always endeavoured, therefore, to find a formulation which brings together in a logical relationship the greatest possible number of observed facts, or else, on the basis of my knowledge of a given psychic state, to predict its probable future development, which is also a method for proving the correctness of a given hypothesis. Many a medical diagnosis, as we know, can hardly be proved right at the moment the doctor formulates it, and can be confirmed only when the disease takes its predicted course. It is in this way that my views concerning the unconscious have little by little been built up.

[1358] It is my conviction that the investigation of the psyche is the science of the future. Psychology is the youngest of the sciences and is only at the beginning of its development. It is, however, the science we need most. Indeed, it is becoming ever more obvious that it is not famine, not earthquakes, not microbes, not cancer but man himself who is man’s greatest danger to man, for the simple reason that there is no adequate protection against psychic epidemics, which are infinitely more devastating than the worst of natural catastrophes. The supreme danger which threatens individuals as well as whole nations is a *psychic danger*. Reason has proved itself completely powerless, precisely because its arguments have an effect only on the conscious mind and not on the unconscious. The greatest danger of all comes from the masses, in whom the effects of the unconscious pile up cumulatively and the reasonableness of the conscious mind is stifled. Every mass organization is a latent danger just as much as a heap of dynamite is. It lets loose effects which no man wants and no man can stop. It is therefore in the highest degree desirable that a knowledge of psychology should spread so that men can understand the source of the supreme dangers that threaten them. Not by arming to the teeth, each for itself, can the nations defend themselves in the long run from the frightful catastrophes of modern war. The heaping up of arms is itself a call to war. Rather must they recognize those psychic conditions under which the unconscious bursts the dykes of consciousness and overwhelms it.

[1359] It is my hope that this book will help to throw light on this fundamental problem for mankind.

MARGINALIA ON CONTEMPORARY EVENTS[1]

[1360] Until a few centuries ago those regions of the world which have since been illuminated by science were shrouded in deepest darkness. Nature was still in her original state, as she had been from time immemorial. Although she had long since been bereft of gods, she had not by any means been *de-psychized*. Demonic spirits still haunted the earth and water, and lingered in the air and fire; witchcraft and prophecies cast their shadows over human relationships, and the mysteries of faith descended deep into the natural world. In certain flowers there could be found images of the martyrs' instruments of torture, and of Christ's blood; the clockwise spiral of the snail's shell was a proof of the existence of God; in alchemy the Virgin birth was figured in the awakening of the *infans mercurialis* in the womb of the earth; Christ's passion was represented by the *separatio*, *solutio*, and *digestio* of the arcane substance; his death and resurrection were reproduced in the processes of chemical transformation. These depicted the otherwise unimaginable transubstantiation. The secret of the baptismal water was rediscovered in the marvellous properties of the solvent *par excellence*, the ὕδωρ θεῖον or *aqua permanens*. Christ's crucifixion was like a prefiguration of the task of natural science, for the tree of the Cross corresponded to the *arbor philosophica*, which in turn stood for the *opus alchymicum* in general.

[1361] Today we can scarcely imagine this state of mind any more, and we can form no proper conception of what it meant to live in a world that was filled from above with the mysteries of God's wonder, down to the very crucible of the smelter, and was corrupted from below by devilish deception, tainted by original sin, and secretly animated by an autochthonous demon or an *anima mundi*—or by those "sparks of the World Soul" which sprang up as the seeds of life when the Ruach Elohim brooded on the face of the waters.

[1362] One can scarcely imagine the unspeakable change that was wrought in man’s emotional life when he took farewell from that almost wholly antique world. Nevertheless, anyone whose childhood was filled with fantasy can feel his way back to it to a certain extent. Whether one laments or welcomes the inevitable disappearance of that primordial world is irrelevant. The important thing is the question that nobody ever asks: What happens to those figures and phantoms, those gods, demons, magicians, those messengers from heaven and monsters of the abyss, when we see that there is no mercurial serpent in the caverns of the earth, that there are no dryads in the forest and no undines in the water, and that the mysteries of faith have shrunk to articles in a creed? Even when we have corrected an illusion, it by no means follows that the psychic agency which produces illusions, and actually needs them, has been abolished. It is very doubtful whether our way of rectifying such illusions can be regarded as valid. If, for example, one is content to prove that there is no whale that could or would like to swallow a Jonah, and that, even if it did, a man would rapidly suffocate under those conditions and could not possibly be spewed forth alive again—when we criticize in this way we are not doing justice to the myth. Indeed, such an argument is decidedly ridiculous because it takes the myth literally, and today this seems a little bit too naïve. Already we are beginning to see that enlightened correction of this kind is painfully beside the point. For it is one of the typical qualities of a myth to fabulate, to assert the unusual, the extraordinary, and even the impossible. In the face of this tendency, it is quite inappropriate to trot out one’s elementary-school knowledge. This sort of criticism does nothing to abolish the mythologizing factor. Only an inauthentic conception of the myth has been corrected. But its real meaning is not touched, even remotely, and the mythologizing psychic factor not at all. One has merely created a new illusion, which consists in the belief that what the myth says is not true. Any elementary-school child can see that. But no one has any idea of what the myth is really saying. It expresses psychic facts and situations, just as a normal dream does or the delusion of a schizophrenic. It describes, in figurative form, psychic facts whose existence can never be dispelled by mere explanation. We have lost our superstitious fear of evil spirits and things that go bump in the night, but, instead, are seized with terror of people who, possessed by demons, perpetrate the frightful deeds of darkness. That the doers of such deeds think of themselves not as possessed, but as "supermen," does not alter the fact of their possession.

[1363] The fantastic, mythological world of the Middle Ages has, thanks to our so-called enlightenment, simply changed its place. It is no longer incubi, succubi, wood-nymphs, melusines, and the rest that terrify and tease mankind; man himself has taken over their role without knowing it and does the devilish work of destruction with far more effective tools than the spirits did. In the olden days men were brutal, now they are dehumanized and possessed to a degree that even the blackest Middle Ages did not know. Then a decent and intelligent person could still—within limits—escape the devil's business, but today his very ideals drag him down into the bloody mire of his national existence.

[1364] The development of natural science as a consequence of the schism in the Church continued the work of the dedeification of Nature, drove away the demons and with them the last remnants of the mythological view of the world. The result of this process was the gradual dissolution of projections and the withdrawal of projected contents into the human psyche. Thus the rabble of spooks that were formerly outside have now transported themselves into the psyche of man, and when we admire the "pure," i.e., depsychized, Nature we have created, we willy-nilly give shelter to her demons, so that with the end of the Middle Ages *anno* 1918 the age of total blood baths, total demonization, and total dehumanization could begin. Since the days of the Children's Crusade, of the Anabaptists and the Pied Piper of Hamelin, no such psychic epidemics have been seen, especially not on a national scale. Even the torture chamber—that staggering achievement of modern times!—has been reintroduced into Europe. Everywhere Christianity has proved incapable[2] of stopping the abomination, although many Christians have set their lives at stake. Finally, the invention of human slaughterhouses—compared with which the Roman circuses of 2,000 years ago were but a piffling prelude—is a scarcely surpassable achievement of the neo-German spirit.

[1365] These facts make one think. The demonism of Nature, which man had apparently triumphed over, he has unwittingly swallowed into himself and so become the devil's marionette. This could happen only because he believed he had abolished the demons by declaring them to be superstition. He overlooked the fact that they were, at bottom, the products of certain factors in the human psyche. When these products were unreal and illusory, their sources were in no way blocked up or rendered inoperative. On the contrary, after it became impossible for the demons to inhabit the rocks, woods, mountains, and rivers, they used human beings as much more dangerous dwelling places. In natural objects much narrower limits were drawn to their effectiveness: only occasionally did a rock succeed in hitting a hut, only rarely was it possible for a river to overflow its banks, devastate the fields, and drown people. But a man does not notice it when he is governed by a demon; he puts all his skill and cunning at the service of his unconscious master, thereby heightening its power a thousandfold.

[1366] This way of looking at the matter will seem "original," or peculiar, or absurd, only to a person who has never considered where those psychic powers have gone which were embodied in the demons. Much as the achievements of science deserve our admiration, the psychic consequences of this greatest of human triumphs are equally terrible. Unfortunately, there is in this world no good thing that does not have to be paid for by an evil at least equally great. People still do not know that the greatest step forward is balanced by an equally great step back. *They still have no notion of what it means to live in a de-psychized world*. They believe, on the contrary, that it is a tremendous advance, which can only be profitable, for man to have conquered Nature and seized the helm, in order to steer the ship according to his will. All the gods and demons, whose physical nothingness is so easily passed off as the "opium of the people," return to their place of origin, Man, and become an intoxicating poison compared with which all previous dope is child's play. What is National Socialism[3] except a vast intoxication that has plunged Europe into indescribable catastrophe?

[1367] What science has once discovered can never be undone. The advance of truth cannot and should not be held up. But the same urge for truth that gave birth to science should realize what progress implies. Science must recognize the as yet incalculable catastrophe which its advances have brought with them. The still infantile man of today has had means of destruction put into his hands which require an immeasurably enhanced sense of responsibility, or an almost pathological anxiety, if the fatally easy abuse of their power is to be avoided. The most dangerous things in the world are immense accumulations of human beings who are manipulated by only a few heads. Already those huge continental blocs are taking shape which, from sheer love of peace and need of defence, are preparing future catastrophes. The greater the equalized masses, the more violent and calamitous their movement!

[1368] When mankind passed from an animated Nature into an exanimated Nature, it did so in the most discourteous way: animism was held up to ridicule and reviled as superstition. When Christianity drove away the old gods, it replaced them by one God. But when science de-psychized Nature, it gave her no other soul, merely subordinating her to human reason. Under the dominion of Christianity the old gods continued to be feared for a long time, at least as demons. But science considered Nature's soul not worth a glance. Had it been conscious of the world-shattering novelty of what it was doing, it would have reflected for a moment and asked itself whether the greatest caution might not be indicated in this operation, when the original condition of humanity was abolished. If yes, then a "rite de sortie," a ceremonial proclamation to the gods it was about to dethrone, and a reconciliation with them, would have been necessary. That at least would have been an act of reverence. But science and so-called civilized man never thought that the progress of scientific knowledge would be a "peril of the soul" which needed forestalling by a powerful rite. This was presumed impossible, because such a "rite de sortie" would have been nothing but a polite kowtowing to the demons, and it was the triumph of the Enlightenment that such things as nature-spirits did not exist at all. But it was merely that what one *imagined* such spirits to be did not exist. They themselves exist all right, here in the human psyche, unperturbed by what the ignorant and the enlightened think. So much so that before our very eves the "most industrious, efficient, and intelligent" nation in Europe could fall into a state of *non compos mentis* and put a poorly gifted housepainter, who was never distinguished by any particular intelligence but only by the use of the right means of mass intoxication, quite literally on the altar of totalitarianism, otherwise reserved for a theocracy, and leave him there. Evidently neither knowledge nor preparation of any kind is needed for the direction of the State, and without any military training one can be a great Field Marshal. Even intelligence blenches at the sight of it and cannot but marvel at the unprecedented "genius." It was indeed something quite out of the ordinary when a person came along and cold-bloodedly stated that *he* would take over the responsibility. It was so stupefying that nobody thought of asking *who* was accepting the responsibility, or of taking the necessary precautions against public mischief. At all events the thing promised far too much for anyone to take serious offence. The psychopathologist is familiar with this particular "genius" of irresponsible promises: it is called *pseudologia phantastica*, and it is considered quite a feat not to be duped by such people, especially when they exhibit in a high degree symptoms of possession, such as divinatory phenomena (hunches, thought-reading, etc.), and fits of pathological affect (the classic frenzy of the prophets). Nothing is so infectious as affect and nothing is so disarming as the promised fulfillment of one's own selfish wishes. I do not dare to think of what might have happened to us Swiss if we had had the misfortune to be a nation of eighty millions. According to all the psychological precedents our stupidity would have been multiplied, and our morality divided, by twenty. The greater the accumulation of masses, the lower the level of intelligence and morality. And if any further proof were needed of this truth, the descent of Germany into the underworld would be an example. We should not delude ourselves that we would not have succumbed too. The presence of traitors in our midst shows how easily we succumb to suggestion, even without the mitigating excuse of being a nation of eighty millions.

[1369] What protected us was above all our *smallness* and the inevitable psychological consequences of this. First the *distrust* of the little man, whose one thought day and night is to ensure that the big man shall not bully or cheat him—for this, if one is small, must be expected of the big man. Hence, the more hectoring his words, the more they arouse *defiance* and *obstinacy:* "Now I certainly won't," says the honest citizen. Whether he is accused of being a misoneist or a conservative or a numskull has no effect on his instinctive reaction—at the moment; in the long run, however, the Swiss is so “reasonable” that he is secretly ashamed of his stolidity, his pigheadedness, his being a hundred years behind the times and consequently runs the risk of involving himself after all in the tumult of “world organization,” “living space,” “economic blocs,” or whatever the nostrums today are called. In this respect it is no mistake to be stuck in the past. It is as a rule better to postpone the future, since it is doubtful whether what comes afterwards will be so much better. Usually it is so with reservations, or not at all.

[1370] Far be it from me to encourage such nasty things as envy and stinginess, but the fact is they exist and contribute to the heightening of distrust and not wanting to get “with it.” Yet, like harmful animals, they have their uses. Naturally I don’t want to speak in favour of the bad qualities, but I enjoy studying them just because, in a collectivity, they prove to be so much more effective than the virtues. They have the great advantage of piling up in proportion to the size of the population while the virtues have the disadvantage of extinguishing each other under the same conditions. They suffer from the same drawback as famous galleries, where the accumulated masterpieces kill each other stone dead. Virtue is jealous, but vice seeks companions (and the evil one loves large numbers, small ones he despises, and therefore occasionally overlooks them).

[1371] In times of unrest such as these, we are protected by our deep roots, by tradition, which—thank God—is still alive and cherished, by love of country, by a profound conviction that no tree ever reaches up to heaven, and that the higher it grows the closer its roots approach to hell, by a taste that likes the middle, the *μηδὲν ὰγαν* (“do nothing to excess”) of the Greek sages, who knew only their *polis* and presumably never even dreamt of a nation of eighty millions, and lastly by the aforesaid bad qualities, which we certainly don’t wish to conceal. We have had enough of this from the other side of the Rhine: “The healthiest, most industrious, most efficient, and staunchest nation”—how the fish rise to this bait! Anyone who is really convinced of his own and his nation’s imperfections will not fall for the power of the superlative, the whopping lie. He knows, or should know, that the statesman who toys with unlawful measures is ultimately working for the ruin of the nation. The demand for the probity of the nation’s leaders must be the fundamental principle of all politics, however humdrum, undiplomatic, unmodern, and short-sighted that may sound. Success that is obtained by bad means sooner or later ends in ruin. The history of the German Reich since 1871 is an object lesson in this respect. But the danger that one will learn nothing from history is great.

[1372] Just as ruinous, it seems to me, as the worship of success and the belief in superlatives is the fashionable tendency to turn man into a mere function of economic factors. Moleschott’s celebrated dictum. “Man is what he eats,” cannot claim to be even a physiological truth, for although he depends on his food, he is not what this is but how he digests it. All schemes for world improvement, world communications, economic spheres of influence, national alliances, etc., stand or fall by the way man deals with them. And if there is anyone who does not believe that even the best idea will in all probability be sabotaged by man’s notorious short-comings, by his stupidity, laziness, unscrupulousness. egotism, etc., he can safely pack up his statistical tables. Even in a system patched together out of countless compromises, and weighed down with all sorts of impractical and seemingly unnecessary historical appendages, the State will prosper tolerably well if the majority of its citizens still possess an unatrophied sense of justice. Nobody can deny the importance of economic conditions, but what is far more important is how the public reacts to their inevitable ups and downs. Over and above all external factors the ultimate decisions always rest with the human psyche. Whether one had a large or a small “living space” matters little in comparison with whether one has a sound or a gullible psyche. In this respect the “leaders,” with sure grasp, have understood what is so crucially lacking: an unquestionable spiritual and moral authority. The pope or the Church could say they are such an authority, but how many people believe it? No doubt one *ought* to believe it, but doesn’t one always use this little word “ought” when one is forced to admit that one simply doesn’t know how the necessary remedy is to be brought about?

[1373] I think the appeal to the religious conscience of humanity no longer arouses any response worth mentioning today. The modern peddlers of poisonous intoxicants have replaced this “opium” with far more effective drugs. Nowadays it is science more than anything that is the great power for good or ill. Science has done more than usher in a new age of unbelief: it *is* that age. When anything is labelled “scientific,” you can be quite sure that it will be given a welcome hearing by everyone who values his intelligence and his intellectual reputation. Here, then, we would have a quite passable authority which has given proof not only of its iconoclastic but also of its positive powers.

[1374] For about half a century now science has been examining under the microscope something that is more invisible than the atom—the human psyche—and what it discovered at first was very far from enjoyable. If one had the necessary imagination one would actually be shattered by these discoveries. But the psychologist today is in the same position as the physicist, who has discovered the elements of a future atomic bomb capable of turning the earth into a nova. He sees it merely as an interesting scientific problem, without realizing that the end of the world has come tangibly closer. In the case of psychology things are not quite as bad as that, but all the same it has discovered where those demons, which in earlier ages dominated nature and man’s destiny, are actually domiciled, and, what is more, that they are none the worse for enlightenment. On the contrary, they are as sprightly as ever, and their activity has even extended its scope so much that they can now get their own back on all the achievements of the human mind. We know today that in the unconscious of every individual there are instinctive propensities or psychic systems charged with considerable tension. When they are helped in one way or another to break through into consciousness, and the latter has no opportunity to intercept them in higher forms, they sweep everything before them like a torrent and turn men into creatures for whom the word “beast” is still too good a name. They can then only be called “devils.” To evoke such phenomena in the masses all that is needed is a few possessed persons, or only one. Possession, though old-fashioned, has by no means become obsolete; only the name has changed. Formerly they spoke of “evil spirits,” now we call them “neuroses” or “unconscious complexes.” Here as everywhere the name makes no difference. The fact remains that a small unconscious cause is enough to wreck a man’s fate, to shatter a family, and to continue working down the generations like the curse of the Atrides. If this unconscious disposition should happen to be one which is common to the great majority of the nation, then a single one of these complex-ridden individuals, who at the same time sets himself up as a megaphone, is enough to precipitate a catastrophe. The good people, in their innocence and unconsciousness, do not know what is happening to them when they are changed overnight into a “master race” (a work of the devil, who has so often changed horse-apples into gold), and an amazed Europe is hard put to accommodate itself to the “new order” where anything so monstrous (one thinks of Maidenek[4] in relation to Eckhart, Luther, Goethe, and Kant!) is not merely a possibility but a *fait accompli*.[5]

[1375] Countless people have asked themselves how it was possible for a civilized nation like Germany to fall into this hellish morass. I once wrote that Germany is the land of spiritual catastrophes.[6] If the neo-German madness proclaims that the Germans are the chosen people, and if they then, out of envious rivalry, persecute the Jews with whom they have certain psychological peculiarities in common (behind every persecution there lurks a secret love, as doubt behind every fanaticism), we are indeed confronted with something quite apart, a state of being “elect.” For nobody can fall so low unless he has a great depth. If such a thing can happen to a man, it challenges his best and highest on the other side; that is to say, this depth corresponds to a potential height, and the blackest darkness to a hidden light. This light is certainly invisible today, because it is blocked up in the depths of the psyche. Indeed everything has gone so desperately awry in Germany, and what has happened is an infernal caricature of the answer the German spirit should have given to the question put to Europe by a new age. Instead of reflecting on this question, it was taken in by that fake figure of the Superman, which the neurotically degenerate mind of Nietzsche invented as a compensation for his own weakness. (Not without some excuse, however, since the Faust that made the pact with the devil was his godfather.) Germany has soiled her name and her honour with the blood of the innocent and brought upon her own head the curse of election. She has aroused such hatred in the world that it is difficult to make the scales of justice balance. And yet the first to enter with the Saviour into paradise was the thief. And what does Meister Eckhart say? “For this reason God is willing to bear the brunt of sins and often winks at them, mostly sending them to people for whom he has prepared some high destiny. See! Who was dearer to our Lord or more intimate with him than his apostles? Not one of them but fell into mortal sin, and all were mortal sinners.”[7]

[1376] Nowhere are the opposites wrenched further apart than in the German. He is like a sick man who has fallen a victim to his unconscious and no longer knows himself.

[1377] The psychiatrist knows that certain dangerous unconscious forces can be rendered harmless, or at least held in check, if they are made conscious, that is. if the patient can assimilate them and integrate them with his personality. In so far as psychiatrists are concerned with the psychic treatment of such complexes, they have to do every day with “demons,” i.e., with psychic factors that display demonic features when they appear as a mass phenomenon. To be sure, a bloodless operation of this kind is successful only when a single individual is involved. If it is a whole family, the chances are ten to one against, and only a miracle can provide the remedy. But when it is a whole nation the artillery speaks the final word. If this is to be avoided one must begin with the individual—and a lamentably long-drawn-out and hopeless labour of Sisyphus this may seem. At any rate people are so impressed by the suggestive power of megaphone oratory that they are inclined to believe that this bad means—mass hypnotism—could be put to a good purpose by “inflammatory” speeches, “pungent” words, and soul-stirring sermons. Though I don’t want to dismiss altogether the saying about the end justifying the means, I must emphasize that mass persuasion for the sake of the good compromises its end and aim, because at bottom it is simply a whipped-up mood whose effect peters out at the earliest opportunity. The innumerable speeches and articles on the “renewal” are futile, so much chatter that hurts nobody and bores everyone.

[1378] *If the whole is to change, the individual must change himself.* Goodness is an individual gift and an individual acquisition. In the form of mass suggestion it is mere intoxication, which has never yet been counted a virtue. Goodness is acquired only by the individual as his own achievement. No masses can do it for him. But evil needs masses for its genesis and continued existence. The mastermen of the S.S. are all, when segregated each by himself, indescribably small and ugly. But the good man shines like a jewel that was lost in the Sahara. The scientist knows that no epidemic can be sealed off by a *cordon sanitaire* unless the individual is prevented from breaking it. Nor can one hope for the cleanliness of a people unless the individual is induced to wash himself daily. Perhaps in a more enlightened era a candidate for governmental office will have to have it certified by a psychiatric commission that he is not a bearer of psychic bacilli. How much this would have spared the world had it been done before 1933!

[1379] The disinfection of the upper echelons would certainly be merely a palliative, for a real cure would consist in the immunization of individuals. The snag here is that the alteration of the individual seems to be such an infinitely long and discouraging way round. It should be remembered, however, that only two other possibilities exist. First, the undoubtedly successful method of mass suggestion, which unfortunately works best only when you want to make something slide downhill or collapse. All that can be built with it are houses of cards or concentration camps or death pits. This method, therefore, is not to be recommended. Second, you can fold your hands in your lap, stick your head in the sand, and let things run on in God’s or the devil’s name. But it is extremely difficult and irritating to let a thing run on. If anything sensible came of it in the end, it would be like a *lèse-majesté* of man. So this way, too, is out.

[1380] What then remains? *Only with the individual can anything be done*. The rise and spread of Christianity show that something of the kind is not altogether impossible. Even a sceptic will have to admit that Christianity has brought about a psychic change of sorts, even if only a superficial one.[8] It expelled many demons (and piled them up somewhere else), and it actually effected the dedeification of nature. If we disregard the mass conversions, its spread was due mainly to the work of one individual upon another. The individual was directly appealed to in early Christian times, and this appeal has continued down through the centuries in the ecclesiastical cure of souls. (In the case of Protestantism one has to ask oneself where, for sheer kerygmatics, the cure of souls has got to!) Without a personal appeal there is no personal influence, which alone can change the attitude of the individual for the better. This requires the personal commitment not only of the one to be changed, but above all of the one who wants to do the changing. Words and gestures influence only the man who is ready to go downhill and is merely waiting for the final push.

[1381] What we need are a few illuminating truths, but no articles of faith. Where an intelligible truth works, it finds in faith a willing ally; for faith has always helped when thinking and understanding could not quite make the grade. Understanding is never the handmaiden of faith—on the contrary, faith completes understanding. To educate men to a faith they do not understand is doubtless a well-meant undertaking, but one runs the risk of creating an attitude that believes everything it does not understand. This—it seems to me—unwittingly prepared the ground for the "genius of the Führer." It is so convenient to be able to believe when one fears the effort of understanding.

[1382] The medical name for make-believe and preaching faith is suggestion therapy. It has the disadvantage of adding something to a person, or taking it away from him, without his insight and decision. Childlike faith, when it occurs naturally, is certainly a charisma. But when "joyful faith" and "childlike trust" are instilled by religious education, they are no charisma but a gift of the ambiguous gods, because they can be manipulated only too easily and with greater effect by other "saviours" as well. Hence the lament of many Germans about the shameful misuse that was made of the best qualities of the German people, their faith, their loyalty, and their idealism.

[1383] Since the Church is still the greatest institution for mass education, with nothing of comparable value to set beside it, it will probably have to consider refining its methods if it wants to appeal to the educated person. The latter is by no means a *quantité négligeable*, as statistics show that what he thinks and writes percolates down to the broad masses within rather less than a generation. Thus, for example, that outstandingly stupid book by Herr Büchner, *Kraft und Stoff*,[9] became in the course of twenty years the most-read book in the public libraries of Germany. The educated man is and remains a leader of the people, whether he knows it or not and whether he wants it or not. The people seek, despite everything, to understand. Although it was not clearly provided for in the original plan of creation that our first parents would eat of the tree of knowledge, it seems nevertheless to have happened, and since then the wheel of history cannot be turned back. The people want still more of those fruits. This is a hopeful sign, for besides stratospheric bombs and the alluring possibilities of uranium there are also, perhaps, salutary truths which instruct man on his true nature and demonstrate its dangerousness as incontestably as modern hygiene demonstrates the aetiology of typhus and virulent smallpox. At the same time, they lend renewed plausibility to an attitude which it has been the constant endeavour of all the higher religions to inculcate into humanity.

ANSWERS TO “MISHMAR” ON ADOLF HITLER[1]

Eugen Kolb, Geneva correspondent of *Mishmar (The Daily Guardian*) of Tel Aviv, wrote to Jung on 4 September 1945 for his answers to the following questions. Jung replied on 14 September.

How do you, as a psychiatrist, judge Hitler as a “patient”?

[1384] Hitler was in my view primarily an *hysteric*. (Already in the first World War he had been officially diagnosed as such.) More particularly he was characterized by a subform of hysteria: *pseudologia phantastica*. In other words he was a “pathological liar.” If these people do not start out directly as deceivers, they are the sort of idealists who are always in love with their own ideas and who anticipate their aims by presenting their wish-fantasies partly as easily attainable and partly as having been attained, and who believe these obvious lies themselves. (Quisling, as his trial showed, was a similar case.) In order to realize their wish-fantasies *no means is too bad* for them, just because they believe they can thereby attain their beloved aim. They “believe” they are doing it for the benefit of humanity, or at least of the nation or their party, and cannot under any circumstances see that their aim is invariably egoistic. Since this is a common failing, it is difficult for the layman to recognize such cases as psychopathic. Because only a convinced person is immediately convincing (by psychic contagion), he exercises as a rule a devastating influence on his contemporaries. Almost everybody is taken in by him.

How could this “psychopath” influence whole nations to such an extent?

[1385] If his maniacal wish-system is a socio-political one, and if it corresponds to the pet ideas of a majority, it produces a psychic epidemic that swells like an avalanche. The majority of the German people were discontented and hugged feelings of revenge and resentment born of their national inferiority complex and identified themselves with the underdogs. (Hence their special hatred and envy of the Jews, who had anticipated them in their idea of a “chosen people”!)

Do you consider his contemporaries, who executed his plans, equally "psychopathic"?

[1386] Suggestion works only when there is a secret wish to fulfil it. Thus Hitler was able to work on all those who compensated their inferiority complex with social aspirations and secret dreams of power. As a result he collected an army of social misfits, psychopaths, and criminals around him, to which he also belonged. But at the same time he gripped the unconscious of normal people, who are always naïve and fancy themselves utterly innocent and right. The majority of normal people (quite apart from the 10 per cent or so who are inferior) are ridiculously unconscious and naïve and are open to any passing suggestion. So far as lack of adaptation is a disease, one can call a whole nation diseased. But this is normal mass psychology; it is a herd phenomenon, like panic. The more people live together in heaps, the stupider and more suggestible the individual becomes.

If that is so, how can they be cured?

[1387] Education for fuller consciousness! Prevention of social herd-formations, of proletarianization and mass-mindedness! No one-party system! No dictatorship! Communal autonomy!

TECHNIQUES OF ATTITUDE CHANGE CONDUCIVE TO WORLD PEACE[1]

Memorandum to Unesco

I

[1388] Psychotherapy as it is taught and practised at the C. G. Jung Institute for Analytical Psychology, Zurich, can be described as a technique for changing the mental attitude. It is a method by which not only neuroses and functional psychoses can be treated, but also all sorts of mental and moral conflicts in normal people. It consists chiefly in the integration of unconscious contents into consciousness. As the unconscious mind complements or—more accurately—compensates the conscious attitude, it becomes of considerable practical importance when the attitude of consciousness deviates to one side to such a degree that the mental balance is upset. This is the case in neuroses and psychoses. The mental and moral conflicts of normal people show a disturbance of balance of a somewhat different kind: the conflicting opposites are both conscious, whereas in the neuroses the opposing half is mostly unconscious. But even with normal people the mental attitude is only partially based upon conscious and rational motives. Quite a number of—often decisive—motives remain unconscious.

[1389] The unconscious mind consists of:

a. Previously conscious but forgotten or repressed contents.

b. Subliminal elements and combinations of elements not yet conscious.

c. Inherited instinctual patterns, so-called archetypes determining human behaviour.

All these contents and elements form together a matrix of the conscious mind, which would not be able to function without their continuous collaboration. A dissociation between conscious and unconscious immediately causes pathological disturbances. The unconscious, therefore, is a factor of the greatest biological importance. Its physiological aspect consists of the functioning of all the subcortical centres, which cannot be influenced by the will, and its psychological aspect of those dominant emotional tendencies in human nature which cannot be ruled by reason. These tendencies are exceedingly dynamic and of an ambivalent nature. If properly understood, they form a most welcome and useful support and *vis a tergo* to conscious convictions and decisions. If misunderstood or misdirected they paralyse and blindfold people, pushing them into a mass-psychosis. It is, therefore, of vital importance in medical psychology to gain access to this reservoir of energy, and no attempt to change mental attitudes can be permanently successful without first establishing a new contact with the unconscious. Hitler’s enormous psychological effect was based upon his highly ingenious method of playing on the well-known national inferiority complex of the Germans, of which he himself was the most outstanding example. A similar yet positive release of unconscious dynamism was the overwhelming expansion of Christianity in the second and third centuries, and the explosive spread of Islam in the seventh century. An instructive example of epidemic insanity was the witch-hunting mania in Germanic countries in the fifteenth century. This was the cause of a veritable campaign of enlightenment initiated by the Papal Bull *Summis desiderantes* in 1484.

[1390] It must be emphasized that “mental attitude” is a concept which does not describe or define accurately enough what we understand by this term. The attitude our method is concerned with is not only a mental but a *moral* phenomenon. An attitude is governed and sustained by a dominant conscious idea accompanied by a so-called “feeling-tone,” i.e., an *emotional value*, which accounts for the efficacy of the idea. The mere idea has no practical or moral effect whatever if it is not supported by an emotional quality having as a rule an *ethical value*. More often than not a neurotic dissociation is due to the effect of an intellectual or moral idea that forms an ideal incompatible with human nature. The contrary is also true, since a dominant immoral idea suppresses the better nature of an individual. In either case the attitude is determined by mental as well as moral factors. This explains why a change of attitude is by no means an easy task, since it always involves considerable moral effort. Should this be lacking, the attitude would not really be changed and the old ways would persist under the disguise of new slogans.

[1391] The *method* can be described only in its general outlines:

a. The patient gives an honest account of his biography.

b. He collects his dreams and other products of the unconscious and submits them to analysis.

c. The analytical procedure tries to establish the *context* surrounding each item of the dream, etc. This is done by collecting the associations to a given item. This part of the work is carried out chiefly by the patient.

d. The context elucidates the incomprehensible dream-text in the same way as corrupt or mutilated texts become readable with the help of philological parallels.

e. In this way it is possible to establish a *reading of the dream-text*. This, however, does not imply an understanding of the *dream's meaning*. Determination of its meaning is a matter of practice, i.e., the apparent meaning has to be related to and compared with the conscious attitude. Without such a comparison it is impossible to understand the functional meaning of the dream.

f. As a rule the meaning of a dream is compensatory to the conscious attitude, i.e., it adds to the latter what was lacking in it. The dream is a *natural attempt to redress a lack of balance*, and it changes the conscious attitude to such an extent that a state of equilibrium is restored.

g. The method can be applied only in individual cases and only if the individual voluntarily submits to it.

h. A change of attitude can be brought about only when there is a motive strong enough to enforce a serious submission to the method. In pathological cases it is, as a rule, the illness itself and its intolerable consequences that provide the necessary motivation. In normal cases of conflict it is strong depression, despair, or a religious problem which enables an individual to make a sustained effort to achieve an ultimate change of attitude. A provisional or experimental application of the method rarely produces the desired effect, i.e., a complete change of attitude.

i. It is, however, possible that an earnest and conscientious person with a trained mind and a scientific education can acquire sufficient knowledge through a careful study of the existing literature to apply the method to himself to a certain extent. By this means he can at least obtain some understanding of its possibilities. But as the method is in essence a *dialectical procedure*, he will not be able to progress beyond a certain point without the help of an experienced teacher. Since the method does not involve intellectual factors only, but also feeling values and above all the important question of *human relationship*, the principle of collaboration becomes imperative.

II

[1392] The applicability and efficacy of the method described above are severely restricted to the individual. A change of attitude can be brought about this way only in the individual and through individual treatment. Moreover, one can apply this method with reasonable hope of success only to individuals endowed with a certain degree of intelligence and sound sense of morality. A marked lack of education, a low degree of intelligence and a moral defect are prohibitive. As 50 per cent of the population are below normal in one or other of these respects, the method could not have any effect on them even under ideal circumstances. Since the most intimate and delicate problems have to be confronted the moment one begins to delve into the meaning of dreams, a man’s attitude cannot be changed unless he takes account of the most questionable and painful aspects of his own character. One cannot, therefore, expect much from the application of such a method to a *group*. A change of attitude never starts with a group but only with an individual.

[1393] If a number of individuals were to undergo such treatment separately, and—provided their motive was strong enough—were to experience a change of attitude, they could subsequently form a group, a *leading minority*, which might become the nucleus of a larger body of people. Their numbers could be increased

a. by individual treatment,
b. by suggestion through authority.

The great mass of the people is led by its suggestibility. It cannot be changed in its *attitude*, only in its *behaviour*. The latter depends upon the *authority of leaders* whose attitude has been really changed.

[1394] In this way the ideas of modern psychology have spread and in a similar way religious and all sorts of intellectual, moral, and immoral movements have gained ground. Such a development seems to be theoretically possible as long as we can be sure that the causes of human attitude are of a psychological nature and can be reached by psychological means. On the other hand we have to remember that psychology in our days is still a very young science and might be still in its cradle. We have to admit, therefore, the possibility of causal factors beyond our rational expectations.

[1395] Within the above-mentioned limits a change of attitude is something that can be taken for granted. Success is not easily attainable and the method is neither infallible nor foolproof. It requires a considerable amount of education and training of physician and teacher and a very strong motive on the part of the patient or pupil. But it is also a fact that the interest of the general public in psychology had rapidly increased in spite of the marked resistance of academic authority. Psychological ideas and concepts have spread far and wide, which is irrefutable proof of real need to know more about psychology. Under these circumstances it would not be unreasonable to consider the possibility of a wider application of the said method.

[1396] The first thing needed would be *teachers*. But here we come up against the inevitable question of motive. The motive must be a vital one and stronger than any prejudice. This is a very serious obstacle. It needs more than mere idealism—the teacher has to be absolutely convinced that his personal attitude is in need of revision, even of actual change. Nobody will condescend to this unless he feels that there really is something wrong. In view of the actual condition of the world every intelligent person is ready to admit that there is something utterly wrong with our attitude. Yet this inclusive statement rarely ever includes the individual in question, namely, the would-be teacher. His attitude is surely right and only needs confirmation and support, but no change. It is a very long step from this conviction to the conclusion: the world is wrong and therefore I am wrong too. To pronounce such words is easy, but to feel their truth in the marrow of one's bones is a very different proposition, yet it is the *sine qua non* of the true teacher. In other words, it is a question of personalities, without which no method and no organization make sense. *A man whose heart is not changed will not change any other's*. Unfortunately the world of today is inclined to belittle and to ridicule such a simple and evident truth as this and thereby proves its own psychological immaturity, which is one of the prime causes of the present state of affairs as well as of numberless neuroses and individual conflicts.

[1397] Since the Middle Ages our mental horizon has been immensely enlarged, but unfortunately in a one-sided way. The object without prevails over the condition within. We know very little of ourselves, we even hate to know more. Yet it is man that experiences the world and any experience is determined by the subject as well as by the object. Logically the subject should be just as important as the object. But actually we know infinitely less of our psyche than of external objects. This fact cannot fail to impress anybody who tries to understand the motivation of human attitudes. The unconscious of highly educated people is often well-nigh incredible in certain respects, not to mention their prejudices and their irresponsible ways of dealing—or rather not dealing—with them. Naturally they set a suggestive example to the masses with disastrous results, but they are little concerned with the *trahison des clercs*. Our insight and our self-education have not kept pace with the ever-expanding external horizon. On the contrary, we know in some ways less of the psyche than in the Middle Ages.

[1398] It is evident that a better knowledge of man's psyche begins with a better understanding of oneself. If the method is successful it often integrates a vast amount of hitherto unconscious material into consciousness, enlarging both its range of vision and its moral responsibility. When parents know which of their unconscious tendencies and habits are injurious to their children's psyches, they will feel a moral obligation to do something about it, provided their sense of duty and their love are normally developed. The same law will operate in groups and, last but not least, in nations, that is, in the leading minorities, in so far as these consist of individuals who are conscious of certain tendencies which could seriously endanger human relationships. The main danger is *direct and indirect egotism*, i.e., unconsciousness of the ultimate equality of our fellow men. Indirect egotism manifests itself chiefly in an abnormal altruism, which is even capable of forcing something that seems right or good to us upon our neighbour under the disguise of Christian love, humanity and mutual help. Egotism always has the character of *greed*, which shows itself chiefly in three ways: the power-drive, lust, and moral laziness. These three moral evils are supplemented by a fourth which is the most powerful of all—*stupidity*. Real intelligence is very rare and forms statistically an infinitesimal part of the average mind. Viewed from the level of a more highly qualified mind, the average intelligence is very low. Unfortunately unusual intelligence is often—as an uncommon individual quality—dearly paid for by a corresponding moral weakness or even defect, and is thus a doubtful gift of the gods.

[1399] Greed is uncontrollable except when counteracted by an equally violent morality. Morality, however, if it exceeds the norm, becomes a real danger to human relationship, because it is the direct instigator of compensatory immoral behaviour and thus reveals its secret root, greed.

[1400] A nation consists of the sum of its individuals, and its character corresponds to the moral average. Nobody is immune to a nationwide evil unless he is unshakably convinced of the danger of his own character being tainted by the same evil. But the immunity of the nation depends entirely upon the existence of a leading minority immune to the evil and capable of combatting the powerful suggestive effect of seemingly possible wish-fulfilments. If the leader is not absolutely immune, he will inevitably fall a victim to his own will-to-power.

[1401] The accumulated greed of a nation becomes utterly uncontrollable unless counteracted by all the forces (civil and military) a government is equipped with. No suggestion works unless one is convinced of its power. Arguments are ineffectual.

III

[1402] As to the next step for further development of the aforesaid method we propose:

a. Giving publicity to the ideas mentioned above in circles likely to influence the few who are capable of drawing their own conclusions.

b. If there are some who share the conviction that their own attitude is really in need of revision, they should be given the opportunity to submit to individual treatment.

c. Since a great deal of self-deception is to be expected as to the seriousness of one’s motivations, some would soon drop out while others would need more time than was foreseen. In this case the financial allowance granted to the former would go to the latter, so that they could continue their work for as long as from six months to a year.

d. As “a change of attitude” is a rather indefinite term, we must emphasize that we understand by this the change brought about through the integration of formerly unconscious contents into consciousness. Such an addition inevitably involves a change that is felt as such. The change is never neutral. It is essentially an increase of consciousness and it depends entirely upon the individual’s character what form it will ultimately take. It is, when it comes to the worst, an inoculation with one’s own virtue. It is a challenge to the whole man, and it must be considered a risk—the risk involved in the further development of man’s consciousness.[2]

THE EFFECT OF TECHNOLOGY ON THE HUMAN PSYCHE[1]

[1403] The question you ask me, concerning the effect of technology on the human psyche, is not at all easy to answer, as you may well imagine. The problem is a very complicated one.

[1404] Since technology consists of certain procedures invented by man, it is not something that somehow lies outside the human sphere. One may therefore conjecture that certain modes of human adaptation also exist which would meet the requirements of technology. Technological activities mostly consist in the identical repetition of rhythmical procedures. This corresponds to the basic pattern of primitive labour, which is never performed without rhythm and an accompanying chant. The primitive, that is, the man who is relatively instinctive, can put up with an extraordinary amount of monotony. There is even something fascinating about it for him. When the work is accompanied by drumming, he is able to heat himself up into an ecstasy, or else the monotony of the action makes him fall into a semi-unconscious condition, which is not so unpleasant either. The question naturally is: What is the effect of these primitive techniques on modern man, who no longer has the capacity to transport himself into semi-unconscious or ecstatic states for any length of time?

[1405] In general it can be said that for modern man technology is an imbalance that begets dissatisfaction with work or with life. It estranges man from his natural versatility of action and thus allows many of his instincts to lie fallow. The result is an increased resistance to work in general. The remedy would presumably be to move industry out of the towns, a four-hour day, and the rest of the time spent in agricultural work on one's own property—if such a thing could be realized. In Switzerland it might be, given time. Naturally it is different with the slum mentality of huge worker-populations, but that is a problem in itself.

[1406] Considered on its own merits, as a legitimate human activity, technology is neither good nor bad, neither harmful nor harmless.

Whether it be used for good or ill depends entirely on man's own attitude, which in turn depends on technology. The technologist has something of the same problem as the factory worker. Since he has to do mainly with mechanical factors, there is a danger of his other mental capacities atrophying. Just as an unbalanced diet is injurious to the body, any psychic imbalances have injurious effects in the long run and need compensating. In my practice I have observed how engineers, in particular, very often developed philosophical interests, and this is an uncommonly sound reaction and mode of compensation. For this reason I have always recommended the institution of Humanistic Faculties at the Federal Polytechnic, to remind students that at least such things exist, so that they can come back to them if ever they should feel a need for them in later life.

[1407] Technology harbours no more dangers than any other trend in the development of human consciousness. The danger lies not in technology but in the possibilities awaiting discovery. Undoubtedly a new discovery will never be used only for the good, but will certainly be used for ill as well. Man, therefore, always runs the risk of discovering something that will destroy him if evilly used. We have come very close to this with the atom bomb. Faced with such menacing developments, one must ask oneself whether man is sufficiently equipped with reason to be able to resist the temptation to use them for destructive purposes, or whether his constitution will allow him to be swept into catastrophe. This is a question which experience alone can answer.

FOREWORD TO NEUMANN: “DEPTH PSYCHOLOGY AND A NEW ETHIC”[1]

[1408] The author has asked me if I would write a foreword to the present book. I am happy to comply with this request, although it is only as an empiricist, and never as a philosopher, that I have been concerned with depth psychology, and cannot boast of ever having tried my hand at formulating ethical principles. My professional work has certainly given me plenty of opportunities to do this, since the chief causes of a neurosis are conflicts of conscience and difficult moral problems that require an answer. The psychotherapist thus finds himself in an extremely awkward situation. Having learnt by long and often painful experience the relative ineffectiveness of trying to inculcate moral precepts, he has to abandon all admonitions and exhortations that begin with “ought” and “must.” In addition, with increasing experience and knowledge of psychic relationships, the conviction dwindles away that he knows exactly what is good and bad in every individual case. His *vis-à-vis*, the other person, is indeed “another,” a profound stranger, if ever the discussion should penetrate to the core of the problem, namely, the unique individuality of the patient. What is then meant by “good”? Good for him? Good for me? Good for his relatives? Good for society? Our judgment becomes so hopelessly caught in a tangle of subsidiary considerations and relationships that, unless circumstances compel us to cut through the Gordian knot, we would do better to leave it alone, or content ourselves with offering the sufferer what modest help we can in unravelling the threads.

[1409] For these reasons it is particularly difficult for the medical psychologist to formulate any ethical principles. I do not mean that such a task does not exist, or that its solution is absolutely impossible. I fully recognize that there is an urgent need today to formulate the ethical problem anew, for, as the author aptly points out, an entirely new situation has arisen since modern psychology broadened its scope by the study of unconscious processes. Concurrently with this, things have happened in Europe, and still go on happening, that far surpass the horrors of imperial Rome or the French reign of terror; things that have ruthlessly revealed the weakness of our whole system of ethics.

[1410] Moral principles that seem clear and unequivocal from the standpoint of ego-consciousness lose their power of conviction, and hence their applicability, when we consider the *compensatory significance of the shadow* in the light of ethical responsibility. No man endowed with any ethical sense can avoid doing this. Only a man who is repressed or morally stupid will be able to neglect this task, though he will not be able to get rid of the evil consequences of such behaviour. (In this respect the author utters some heartening truths.)

[1411] The tremendous revolution of values that has been brought about by the discovery of the unconscious, with repercussions still to come, is scarcely understood today or even noticed. The psychological foundation of all philosophical assertions, for example, is still assiduously overlooked or deliberately obscured, so much so that certain modern philosophies unconsciously lay themselves open to psychological attack. The same is true of ethics.

[1412] It is, understandably enough, the medical psychologist who is the first to be impressed by the shortcomings or evils of the epoch, for he is the first to have to deal with its casualities. The treatment of neurosis is not, in the last resort, a technical problem, but a moral one. There are, admittedly, interim solutions that are technical, but they never result in the kind of ethical attitude that could be described as a real cure. Although every act of conscious realization is at least a step forward on the road to individuation, to the “making whole” of the individual, the integration of the personality is unthinkable without the responsible, and that means moral, relation of the parts to one another, just as the constitution of a state is impossible without mutual relations between its members. The ethical problem thus poses itself, and it is primarily the task of the psychologist to provide an answer or to help his patient find one. Often this work is wearisome and difficult, because it cannot be accomplished by intellectual shortcuts or moral recipes, but only by careful observation of the inner and outer conditions. Patience and time are needed for the gradual crystallization of a goal and a direction for which the patient can take responsibility. The analyst learns that ethical problems are always intensely individual and can convince himself again and again that the collective rules of conduct offer at most provisional solutions, but never lead to those crucial decisions which are the turning-points in a man's life. As the author rightly says: "The diversity and complexity of the situation make it impossible for us to lay down any theoretical rule of ethical behaviour."

[1413] The formulation of ethical rules is not only difficult but actually impossible because one can hardly think of a single rule that would not have to be reversed under certain conditions. Even the simple proposition "Conscious realization is good" is only of limited validity, since we not infrequently meet with situations in which conscious realization would have the worst possible consequences. I have therefore made it a rule to take the "old ethic" as binding only so long as there is no evidence of its injurious effects. But if dangerous consequences threaten, one is then faced with a problem of the first order,[2] the solution of which challenges the personality to the limit and demands the maximum of attention, patience and time. The solution, in my experience, is always individual and is only subjectively valid. In such a situation, all those reflections which the author passes under review have to be considered very seriously. Despite their subjective nature, they cannot very well be formulated except as collective concepts. But since these reflections constantly recur in practice—for the integration of unconscious contents continually poses such questions—it necessarily follows that, in spite of individual variation, they will exhibit certain regular features which make it seem possible to abstract a limited number of rules. I do not, myself, think that any of these rules are absolutely valid, for on occasion the opposite may be equally true. That is what makes the integration of the unconscious so difficult: we have to learn to think in antinomies, constantly bearing in mind that every ultimate truth turns into an antinomy if it is thought out to the end. All our statements about the unconscious are "eschatological" truths, that is, borderline concepts which formulate a partially apprehended fact or situation, and are therefore only conditionally valid.

[1414] The ethical problems that cannot be solved in the light of collective morality or the "old ethic" are *conflicts of duty,* otherwise they would not be ethical. Although I do not share Friedrich Theodor Vischer's optimistic view that morality is always self-evident, I am nevertheless of the opinion that in working out a difficult problem the moral aspect of it has to be considered if one is to avoid a repression or a deception. He who deceives others deceives himself, and vice versa. Nothing is gained by that, least of all the integration of the shadow. Indeed, its integration makes the highest demands on an individual's morality, for the "acceptance of evil" means nothing less than that his whole moral existence is put in question. Decisions of the most momentous kind are called for. The alchemical dictum "The art requires the whole man" is particularly true of the integration of the unconscious, and this process was in fact symbolically anticipated by the alchemists. It is evident, therefore, that the solution will be satisfactory only if it expresses the whole of the psyche. This is not possible unless the conscious mind takes account of the unconscious, unless desire is confronted with its possible consequences, and unless action is subjected to moral criticism.

[1415] Nor should it be forgotten that moral law is not just something imposed upon man from outside (for instance, by a crabbed grandfather). On the contrary, it expresses a psychic fact. As the regulator of action, it corresponds to a preformed image, a pattern of behaviour which is archetypical and deeply embedded in human nature. This has no fixed content; it represents the specific form which any number of different contents may take. For one person it is "good" to kill those who think differently from him; for another the supreme law is tolerance; for a third it is a sin to skin an animal with an iron knife; for a fourth it is disrespectful to step on the shadow of a chief. Fundamental to all these rules is "religious observation" or "careful consideration," and this involves a moral effort which is indispensable for the development of consciousness. A saying of Jesus in the Codex Bezae (referring to Luke 6: 4) expresses it in lapidary form: "Man, if thou knowest what thou doest, thou art blessed. But if thou knowest not, thou art accursed and a transgressor of the law."

[1416] We might therefore define the "new ethic" as a development and differentiation within the old ethic, confined at present to those uncommon individuals who, driven by unavoidable conflicts of duty, endeavour to bring the conscious and the unconscious into responsible relationship.

[1417] In so far as ethics represent a system of moral demands, it follows that any innovations within or outside this system would also possess a "deontological" character. But the psychic situation to which the new admonition "you ought" would be applicable is so complicated, delicate and difficult that one wonders who would be in a position to make such a demand. Nor would it be needed at all since the ethically minded person who gets into a situation of this sort has already been confronted with this same demand, from within, and knows only too well that there is no collective morality that could extricate him from his dilemma. If the values of the old ethic were not seated in the very marrow of his bones, he would never have got into this situation in the first place. Let us take as an example the universally valid commandment: Thou shalt not lie. What is one to do if, as frequently happens to a doctor, one finds oneself in a situation where it would be a catastrophe to tell the truth or to suppress it? If one does not want to precipitate the catastrophe directly, one cannot avoid telling a convincing lie, prompted by psychological common sense, readiness to help, Christian charity, consideration for the fate of the other people concerned—in short, by ethical motives just as strong as if not stronger than those which compel one to tell the truth. One comforts oneself with the excuse that it was done in a good cause and was therefore moral. But anyone who has insight will know that on the one hand he was too cowardly to precipitate a catastrophe, and on the other hand that he has lied shamelessly. He has done evil but at the same time good. No one stands beyond good and evil, otherwise he would be out of this world. Life is a continual balancing of opposites, like every other energic process. The abolition of opposites would be equivalent to death. Nietzsche escaped the collision of opposites by going into the madhouse. The yogi attains the state of *nirdvandva* (freedom from opposites) in the rigid lotus position of non-conscious, non-acting *samadhi*. But the ordinary man stands between the opposites and knows that he can never abolish them. There is no good without evil, and no evil without good. The one conditions the other, but it does not become the other or abolish the other. If a man is endowed with an ethical sense and is convinced of the sanctity of ethical values, he is on the surest road to a conflict of duty. And although this looks desperately like a moral catastrophe, it alone makes possible a higher differentiation of ethics and a broadening of consciousness. A conflict of duty forces us to examine our conscience and thereby to discover the shadow. This, in turn, forces us to come to terms with the unconscious. The ethical aspect of this process of integration is described with praiseworthy clarity by the author.

[1418] Those who are unfamiliar with the psychology of the unconscious will have some difficulty in envisaging the role which the unconscious plays in the analytical process. The unconscious is a living psychic entity which, it seems, is relatively autonomous, behaving as if it were a personality with intentions of its own. At any rate it would be quite wrong to think of the unconscious as mere “material,” or as a passive object to be used or exploited. Equally, its biological function is not just a mechanical one, in the sense that it is merely *complementary* to consciousness. It has far more the character of *compensation*, that is, an intelligent choice of means aiming not only at the restoration of the psychic equilibrium but at an advance towards wholeness. The reaction of the unconscious is far from being merely passive; it takes the initiative in a creative way, and sometimes its purposive activity predominates over its customary reactivity. As a partner in the process of conscious differentiation, it does not act as a mere opponent, for the revelation of its contents enriches consciousness and assists differentiation. A hostile opposition takes place only when consciousness obstinately clings to its one-sidedness and insists on its arbitrary standpoint, as always happens when there is a repression and, in consequence, a partial dissociation of consciousness.

[1419] Such being the behaviour of the unconscious, the process of coming to terms with it, in the ethical sense, acquires a special character. The process does not consist in dealing with a given “material,” but in negotiating with a psychic minority (or majority, as the case may be) that has equal rights. For this reason the author compares the relation to the unconscious with a parliamentary democracy, whereas the old ethic unconsciously imitates, or actually prefers, the procedure of an absolute monarchy or a tyrannical one-party system. Through the new ethic, the ego-consciousness is ousted from its central position in a psyche organized on the lines of a monarchy or totalitarian state, its place being taken by *wholeness* or the *self*, which is now recognized as central. The self was of course always at the centre, and always acted as the hidden director. Gnosticism long ago projected this state of affairs into the heavens, in the form of a metaphysical drama: ego-consciousness appearing as the vain demiurge, who fancies himself the sole creator of the world, and the self as the highest, unknowable God, whose emanation the demiurge is. The union of conscious and unconscious in the individuation process, the real core of the ethical problem, was projected in the form of a drama of redemption and, in some Gnostic systems, consisted in the demiurge's discovery and recognition of the highest God.

[1420] This parallel may serve to indicate the magnitude of the problem we are concerned with, and to throw into relief the special character of the confrontation with the unconscious on an ethic plane. The problem is indeed a vital one. This may explain why the question of a new ethic is of such serious and urgent concern to the author, who argues his case with a boldness and passion well matched by his penetrating insight and thoughtfulness. I welcome this book as the first notable attempt to formulate the ethical problems raised by the discovery of the unconscious and to make them a subject for discussion.

March 1949

FOREWORD TO BAYNES : “ANALYTICAL PSYCHOLOGY AND THE ENGLISH MIND”[1]

[1421] I write these few introductory words to this collection of essays and lectures in affectionate memory of their author. The late H. G. Baynes was my assistant for several years, my travelling companion on our African expedition, and my faithful friend till his all too early death, which has left a painful gap in the circle of his friends and colleagues.

[1422] His first published work was his most excellent translation of my book *Psychological Types*.[2] Later he became well known as the author of two important works, *Mythology of the Soul*[3] and *Germany Possessed.*[4] The first of these deals with the daily reality of the psychotherapist, and the second with contemporary events.

[1423] In *Mythology of the Soul* the author uses raw material—such as the psychotherapist meets with daily in his consulting hours—as a clue to guide the reader through the maze of individual reflections, opinions, interpretations, and attempts at explanation which a psychologist gathers in the course of his experience. The empirical material stimulates such considerations, and they are also indispensable in order to integrate it in consciousness.

[1424] *Germany Possessed* is concerned with the great contemporary problems which form a direct challenge to the psychologically minded doctor. This book made the author known to a very wide public.

[1425] His shorter writings, which have been collected in this present volume, deal with the complex psychic conditions characteristic of medical psychology. Psychology is thus a discipline which obliges the medical psychologist to deal with complex psychic factors, for the psychotherapeutic process can only take place on this level. Therefore analytical psychology is also rightly called “complex psychology.”

[1426] A simplifying theory is naturally exceedingly popular in this highly complicated field, but the author has wisely resisted any such temptation. In its place he has drawn from a really remarkable wealth of theoretical and practical points of view and has opened up possibilities and connections worthy of further discussion.

[1427] H. G. Baynes left us too soon. May this volume, which he has left to us, become a milestone on the road of psychological research.

THE RULES OF LIFE[1]

[1428] In reply to your kind enquiry about "rules of life," I would like to remark that I have had so much to do with people that I have alway endeavoured to live by no rules as far as possible. Non-observance of rules requires, of course, far less effort, for usually one makes a rule in order to repress the tendency in oneself not to follow it. In psychology, above all, rules are valid only when they can be reversed. Also, they are not without their dangers, since they consist of words and our civilization is largely founded on a superstitious belief in words. One of the supreme religious assumptions is actually the "Word." Words can take the place of men and things. This has its advantages but it is also a menace. One can then spare oneself the trouble of thinking for oneself or making any effort, to one's own advantage or disadvantage and that of one's fellows.

[1429] I have, for instance, a tendency to make a principle of doing what I want to do or should do as soon as possible. This can be very unwise and even stupid. The same applies to practically all adages and "rules of life." Take, for example, the saying, "Quid-quid id est, prudenter agas et respice finem" (Whatever it be, act prudently and consider the end). But in this way, however praiseworthy the principle is, you can let a vitally important decision of the moment slip through your fingers.

[1430] No rules can cope with the paradoxes of life. Moral law, like natural law, represents only one aspect of reality. It does not prevent one from following certain "regular" habits *unconsciously*—habits which one does not notice oneself but can only discover by making-careful inquiries among one's fellows. But people seldom enjoy having what they don't know about themselves pointed out to them by others, and so they prefer to lay down rules which are the exact opposite of what they are doing in reality.

ON FLYING SAUCERS[1]

[1431] Your wish to bring up the “Flying Saucers” for discussion is certainly a timely one. But though you may not have overshot the mark in questioning me, I must tell you that in spite of the interest I have taken in the subject since about 1946, I have still not been able to establish an empirical basis sufficient to permit any conclusions to be drawn. In the course of years I have accumulated a voluminous dossier on the sightings, including the statements of two eyewitnesses well-known to me personally (I myself have never seen anything!) and have read all the available books, but I have found it impossible to determine even approximately the nature of these observations. So far only one thing is certain: it is not just a rumour, *something is seen*. What is seen may in individual cases be a subjective vision (or hallucination), or, in the case of several observers seeing it simultaneously, a collective one. A psychic phenomenon of this kind would, like a rumour, have a compensatory significance, since it would be a spontaneous answer of the unconscious to the present conscious situation, i.e., to fears created by an apparently insoluble political situation which might at any moment lead to a universal catastrophe. At such times men’s eyes turn to heaven for help, and marvellous signs appear from on high, of a threatening or reassuring nature. (The “round” symbols are particularly suggestive, appearing nowadays in many spontaneous fantasies directly associated with the threatening world situation.)

[1432] The possibility of a purely psychological explanation is illusory, for a large number of observations point to a natural phenomenon, or even a physical one—for instance, those explicable by reflections from “temperature inversions” in the atmosphere. Despite its contradictory statements, the American Air Force, as well as the Canadian, consider the sightings to be “real,” and have set up special bureaux to collect the reports. The “disks,” however, that is, the objects themselves, do not behave in accordance with physical laws but as though they were weightless, and they show signs of *intelligent guidance* such as would suggest quasi-human pilots. Yet the accelerations are so tremendous that no human being could survive them.

[1433] The view that the disks are real is so widespread (in America) that reports of landings were not long in coming. Recently I read accounts of this kind from two different sources. In both of them the mystical element in the vision or fantasy was very much in evidence: they described half-human, idealized human beings like angels who delivered the appropriate edifying messages.[2] Unfortunately, there is a total lack of any useful information. And in both cases the photographs failed to come out. Reports of landings, therefore, must for the time being be taken with considerable caution.

[1434] What astonishes me most of all is that the American Air Force, despite all the information it must possess, and despite its alleged fear of creating a panic similar to the one which broke out in New Jersey on the occasion of Welles's radio play,[3] is systematically working towards that very thing by refusing to release an authentic and reliable account of the facts.[4] All we have to go on is the occasional information squeezed out by journalists. It is therefore impossible for the uninitiated to form an adequate picture of what is happening. Although for eight years I have been collecting everything that came within my reach, I must admit I am no further forward today than I was at the beginning. I still do not know what we are up against with these "flying saucers." The reports are so weird that, granted the reality of these phenomena, one feels tempted to compare them with parapsychological happenings.

[1435] Because we lack any sure foundation, all speculation is worthless. We must wait and see what the future brings. So-called "scientific" explanations, such as Menzel's reflection theory, are possible only if all the reports that fail to fit the theory are conveniently overlooked.

[1436] That is all I have to say on the subject of Flying Saucers. An interview would therefore not be worthwhile.

[*Supplementary Questions Addressed to Jung by Letter*]

Supposing it should turn out that we are being spied upon by non-human, intelligent beings, do you think that this could be assimilated into the existing world-picture without harmful results? Or do you think it would necessarily lead to a kind of Copernican revolution, and that consequently the panic you fear would be a legitimate counteraction?

Further, should the responsible authorities take steps to prevent a panic, and what psychohygienic measures seem suitable to you for this purpose?

[1437] These questions are entirely legitimate today, since there are responsible persons—better informed than I—who are of the opinion that the phenomena we are discussing are of extraterrestrial origin. As I have said, I cannot, or cannot yet, share this view, because I have not been able to obtain the necessary confirmation. If these "objects" are, as claimed, of extraterrestrial or possibly planetary origin (Mars, Venus), we still have to consider the reports of Saucers rising out of the sea or the earth. We must also take account of numerous reports of phenomena resembling ball lightning, or strange, stationary will-o'-the-wisps (not to be confused with St. Elmo's fire). In rare cases ball lightning can attain considerable dimensions, appearing as a dazzling ball of light, half as big as the moon, moving slowly from cloud to cloud, or ripping a path about five yards wide and 200 yards long through a forest, smashing all the trees in its way. It is either soundless, like the Saucers, or it can vanish with a clap of thunder. It is possible that ball lightning in the form of isolated charges of electricity (so-called "bead-lightning") is the origin of those Saucers arranged in a row which have been photographed on several occasions. Other electrical phenomena have frequently been reported in connection with the Saucers.

[1438] If, despite this still unclarified possibility, the extraterrestrial origin of the Saucers should be confirmed, this would prove the existence of intelligent interplanetary communication. What such a fact might mean for humanity cannot be imagined. But there is no doubt we would find ourselves in the same critical situation as primitive societies confronted with the superior culture of the white man. The reins of power would be wrenched from our hands, and, as an old witch doctor once told me with tears in his eyes, we would have “no dreams any more”—the lofty flights of our spirit would have been checked and crippled forever.

[1439] Naturally, the first thing to be consigned to the rubbish heap would be our science and technology. What the moral effects of such a catastrophe would be can be seen from the pitiful decay of primitive cultures taking place before our eyes. That the construction of such machines would be evidence of a scientific technology immensely superior to ours admits of no two opinions. Just as the Pax Britannica put an end to tribal warfare in Africa, so our world could roll up its Iron Curtain and use it as so much scrap along with all the billions of tons of armaments, warships, and munitions. That wouldn’t be such a bad thing, but we would have been “discovered” and colonized—reason enough for universal panic!

[1440] If we wish to avoid such a catastrophe, the officials in possession of authoritative information should not hesitate to enlighten the public as speedily and thoroughly as possible, and above all stop this stupid game of mystification and suggestive allusion. Instead, they have allowed a lot of fantastic and mendacious publicity to run riot—the best possible preparation for panic and psychic epidemics.

[*Further Supplementary Questions*]

The idea of a possible parallel with parapsychological processes is extremely interesting. Presumably you are thinking of apparitions?

You write that in times like these men’s eyes turn to heaven for help. Are you thinking of some period of upheaval in the past, which produced comparable phenomena? Is there evidence of other collective visions or hallucinations with a similar content?

How do you explain the fact that with few exceptions Saucers have so far been observed only over the North American continent? Does this, in your view, suggest that they are more likely to be psychic—specifically American “apparitions,” as it were—or, on the contrary, that they are of an objective nature?

[1441] It is hardly possible to answer your question about the analogy of the Saucers with parapsychological phenomena, since a basis for comparison is totally lacking. If we wished to take such a possibility seriously, it would first have to be shown that the "apparitions" are causally connected with psychic states; in other words, that under the influence of certain emotional conditions a major population group experiences the same psychic dissociation and the same exteriorization of psychic energy as does a single medium. All we know at present is that collective visions do exist. But whether collective *physical* phenomena, such as levitations, apparitions of light, materializations, etc., can also be produced is a moot question. At present any reference to the parapsychological aspect only demonstrates the boundless perplexity in which we find ourselves today.

[1442] I cannot refrain from remarking, however, that the whole collective psychological problem that has been opened up by the Saucer epidemic stands in compensatory antithesis to our scientific picture of the world. In the United States this picture has if possible an even greater dominance than with us. It consists, as you know, very largely of statistical or "average" truths. These exclude all rare borderline cases, which scientists fight shy of anyway because they cannot understand them. The consequence is a view of the world composed entirely of normal cases. Like the "normal" man, they are essentially *fictions*, and particularly in psychology fictions can lead to disastrous errors. Since it can be said with a little exaggeration that reality consists mainly of exceptions to the rule, which the intellect then reduces to the norm, instead of a brightly coloured picture of the real world we have a bleak, shallow rationalism that offers stones instead of bread to the emotional and spiritual hungers of the world. The logical result is an insatiable hunger for anything extraordinary. If we add to this the great defeat of human reason, daily demonstrated in the newspapers and rendered even more menacing by the incalculable dangers of the hydrogen bomb, the picture that unfolds before us is one of universal spiritual distress, comparable to the situation at the beginning of our era or to chaos that followed A.D. 1000, or the upheavals at the turn of the fifteenth century. It is therefore not surprising if, as the old chroniclers report, all sorts of signs and wonders appear in the sky, or if miraculous intervention, where human efforts have failed, is expected from heaven. Our Saucer sightings can be found—*mutatis* *mutandis*—in many reports that go back to antiquity, though not, it would seem, with the same overwhelming frequency. But then, the possibility of destruction on a global scale, which has been given into the hands of our so-called politicians, did not exist in those days.

[1443] McCarthyism and the influence it has exerted are evidence of the deep and anxious apprehensions of the American public. Therefore most of the signs in the skies will be seen in North America.

[1444] At the beginning of this century I was firmly convinced that nothing heavier than air could fly and that the atom was really "a-tomic" (indivisible). Since then I have become very cautious and will only repeat what I said at the beginning of our correspondence: Despite a fairly thorough knowledge of the available literature (six books and countless reports and articles, including two eyewitness reports), I still do not know what kind of reality the Flying Saucers may have. So I am not in a position to draw conclusions and to form any reliable judgment. I just don't know what one should make of this phenomenon.

Statement to the United Press International[5]

[1445] As a result of an article published in the *APRO Bulletin*, the report has been spread by the press that in my opinion the Ufos are physically real. This report is altogether false. In a recently published book (*Ein Moderner Mythus*, Zurich, 1958),[6] I expressly state that I cannot commit myself on the question to the physical reality or unreality of the Ufos since I do not possess sufficient evidence either for or against. I therefore concern myself solely with the psychological aspect of the phenomenon, about which a great deal of material is available. I have formulated the position I take on the question of the reality of Ufos in the following sentence: "Something is seen, but it isn't known what." This formulation leaves the question of "seeing" open. Something material could be seen, or something psychic could be seen. Both are realities, but of different kinds.

[1446] My relations with APRO are confined to the following: while I was collecting material for the above-mentioned book, the *APRO Bulletin* approached me in a friendly manner. When this organization recently asked me if they might consider me to be an honorary member, I consented. I have sent my book to APRO to inform them of my position in regard to the Ufo question. APRO advocates the physical reality of the Ufo with much zeal and idealism. I therefore regard its misleading article as a regrettable accident.

Letter to Keyhoe[7]

16 August 1958

Major Donald E. Keyhoe
National Investigation Committee on Aerial Phenomena
1536 Connecticut Avenue
Washington 6, D. C.

Dear Major Keyhoe,

[1447] Thank you very much for your kind letter! I have read all you have written concerning Ufos and I am a subscriber to the *NICAP Bulletin*. I am grateful for all the courageous things you have done in elucidating the thorny problem of Ufo-reality.

[1448] The article in *APRO Bulletin* July 1958, which caused all that stir in the press, is unfortunately inaccurate. As you know I am an alienist and medical psychologist. I have never seen a Ufo and I have no first-hand information either about them or about the dubious attitude of the AAF [American Air Force]. On account of this regrettable lack I am unable to form a definite opinion concerning the physical nature of the Ufo-phenomenon. As I am a scientist, I only say what I can prove and reserve my judgment in any case where I doubt my competence. Thus I said: “Things are seen, but one does not know what.” I neither affirm, nor deny. But it is certain beyond all possible doubt that plenty of statements about Ufos are made and they are of all sorts. I am chiefly concerned with this aspect of the phenomenon. It yields a rich harvest of insight into its universal significance. My special preoccupation precludes neither the physical reality of the Ufos nor their extraterrestrial origin, nor the purposefulness of their behaviour, etc. But I do not possess sufficient evidence which would enable me to draw definite conclusions. The evidence available to me however is convincing enough to arouse a continuous and fervent interest. I follow with my greatest sympathy your exploits and your endeavours to establish the truth about the Ufos.

[1449] In spite of the fact that I hold my judgment concerning the nature of the Ufos—temporarily let us hope—in abeyance, I thought it worth while to throw a light upon the rich fantasy material which has accumulated round the peculiar observations in the skies. Any new experience has two aspects: (1) the pure fact and (2) the way one conceives of it. It is the latter I am concerned with. If it is true that the AAF or the Government withholds telltale facts, then one can only say that this is the most unpsychological and stupid policy one could invent. Nothing helps rumours and panics more than ignorance. It is self-evident that the public ought to be told the truth, because ultimately it will nevertheless come to the light of day. There can be hardly any greater shock than the H-bomb and yet everyone knows of it without fainting.

[1450] As to your question about the possible hostility of the Ufos, I must emphasize that I have no other knowledge about them than that which everybody can get out of printed reports. That is the reason why I am still far from certain about the Ufos’ physical reality.

[1451] Thank you for your kind offer to send me clippings. I have got enough of them. It is a curious fact that whenever I make a statement it is at once twisted and falsified. The press seems to enjoy lies more than the truth.

I remain, dear Major,

Yours, C. G. JUNG

HUMAN NATURE DOES NOT YIELD EASILY TO IDEALISTIC ADVICE[1]

[1452] There is little to criticize in Mr. Roberts' article since its author is obviously a man of good will and optimistic enthusiasm. Moreover, he points in the right direction, and he gives proper value to man's mental and moral attitude. He hopes and believes, it seems to me, that saying the right and good thing will be enough to produce the desired effect. Unfortunately, human nature is a bit more complicated and does not yield to a well-meaning hint or to idealistic advice.

[1453] It always has been and still is the great question how to get the ordinary human to the point where he can make up his mind to draw the right conclusion and to do the right thing, or how to make him listen at all. His moral and mental inertia and his notorious prejudices are the most serious obstacle to any moral or spiritual renaissance. If he had been inclined to resist the overwhelming impact of his emotional entanglements, passions, and desires, and to put a stop to the haste and rush of his daily activities, and to try at least to get out of his lamentable yet cherished unconsciousness about himself, the world and its sad history of intrigue, violence, and cruelty would have reached a state of peace and humanity long before Christ—in the time of Buddha or Socrates. But to get him there, that's just the trouble.

[1454] It is perhaps a good idea to liberate man from all inhibitions and prejudices that hamper, torment, and disfigure him. But the question is less to liberate from something, than rather, as Nietzsche asked, to which end? In certain cases it looks as if in getting rid of one's inhibitions and burdens, one had "thrown away one's best." Liberation can be a good or a very bad solution. It largely depends upon the choice of one's further goal whether the liberation has been a boon or a fatal mistake.

[1455] I don't want to go further into the complexities of this problem, and moreover it would be unfair to criticize the author for something he obviously is not aware of, viz., the fact that this formulation of the problem dates from about forty years ago. Since that time, a voluminous literature thoroughly dealing with the point in question has come into existence. I don’t know which circumstances have prevented the author from informing himself about the more modern developments in the discussion between religion and psychology. In view of Freud’s notorious inability to understand religion, the reader would have welcomed, if not expected, a summary at least of the main work done along this line during the past four decades. Goodwill and enthusiasm are not to be underrated, but ignorance is regrettable.

ON THE HUNGARIAN UPRISING[1]

I

[1456] 1. The bloody suppression of the Hungarian people by the Russian army is a vile and abominable crime, to be condemned forthwith.

2. The Egyptian dictator has by unlawful measures provoked Great Britain and France to a warlike act. This is to be deplored as a relapse into obsolete and barbarous methods of politics.

II

[1457] The crushing of Hungary is one more link in the chain of iniquitous events which make the middle of the twentieth century one of the blackest chapters in history, rich in infamies as it is. Western Europe had to endure the spectacle of a civilized European country being throttled and, conscious of its own miserable impotence, be content to play the Good Samaritan. Though the great storm of indignation unleashed by outraged public feeling was unable to blow away the Russian tanks, it at least brought with it the relief everyone feels when guilt can be laid beyond all doubt at somebody else's door. In the worldwide moral outcry we scarcely heard the voice of our own conscience, reminding the West of those wicked deeds of Machiavellianism, short-sightedness, and stupidity without which the events in Hungary would not have been possible. The focus of the deadly disease lies in Europe.

ON PSYCHODIAGNOSTICS[1]

Can one, with today's psychodiagnostic methods, determine the suitability of a candidate for a job, in a matter of hours or days, more efficiently than the employer could with the help of his general knowledge of human nature?

[1458] The employer may have a very good knowledge of human nature, able to size up the total situation intuitively in a few seconds. Naturally you can't acquire a knack like this from any method. There are, however, employers who are anything but good judges of men. In this case a careful and conscientious psychodiagnosis is the only right thing. Anyway, it is better than nothing, and certainly better than the employer's illusions and projections.

Are we right to oppose the use of psychodiagnostics in the selection of candidates, or is it simply another futile attempt to turn back the wheel of history?

[1459] It would be plain stupid to oppose the use of psychodiagnostics, for these tests are so widely used today that nobody can fight against them. By refusing them one puts oneself in a false position from the start, as in certain cases of refusal to testify in court. But if you are faced with a good judge of men, he will extract your painful secrets from your trouser pocket with the greatest skill without your knowing it, and do it much better than was ever done by a psychodiagnostic method.

We would like to ask you for a short prognosis concerning the further development of these methods and their influence on society.

[1460] I am no prophet, and I cannot predict the future of our society. I can only tell you that I hope for a further improvement in psychodiagnostic methods and in the understanding of man in general, as contrasted with the other possibility that any man may be pushed into any kind of job anywhere. Anything that promotes the understanding of one’s fellow men is welcome to me.

IF CHRIST WALKED THE EARTH TODAY[1]

[1461] It is absolutely certain that if a Christ should reappear in the world he would be interviewed and photographed by the press and would not live longer than one month. He would die being fed up with himself, as he would see himself banalized beyond all endurance. He would be killed by his own success, morally and physically.

FOREWORD TO “HUGH CRICHTON-MILLER, 1877–1959”[1]

[1462] It is more than thirty years ago—on the occasion of a short stay in England—that I became acquainted with Dr. Hugh Crichton-Miller. Being a stranger and, on account of my unorthodox views, a psychiatric outsider, I was deeply impressed by the friendly, open, and unprejudiced manner of his welcome. Not only did he introduce me to the staff of his clinic, he also invited me to give them a short address—much to my embarrassment, since I never felt particularly certain of myself when called upon to talk to an entirely unknown audience. But I soon felt the presence of an atmosphere of mutual trust and confidence between chief and staff, so that I could talk to them in a more or less natural way—at least I hope so. Talking to Crichton-Miller was easy. I felt we were speaking the same language, though our views were not always the same. But they were reasonably different, so that a satisfactory discussion was possible. Whenever I had a chance in the course of many years, I very much enjoyed discussing controversial points with him. He was for I don’t know how many years the only man of my age with whom I could talk as man to man, without constantly fearing that my partner would suddenly throw a fit or become otherwise impolite. We took each other at our face value and in the course of years we grew slowly into the conviction that we had a good relationship. Such a silent conviction can be, in spite of everything, an illusion as long as it has not come to an actual showdown. The proof of this came in the last years before the second World War.

[1463] We then had an international Society for Psychotherapy on the continent consisting of a Dutch, Danish, Swiss, and a very large German group. The president of the Society had been Professor Kretschmer up to 1933, when he resigned in the fatal year of Hitler’s usurpation of power. I had been up to then in the inactive role of an honorary vice-president. The German group, afraid of getting amalgamated with, i.e., overshadowed by, the far more influential “Society for Psychiatry” with its well-known anti-psychological prejudice, asked me to take over the function of president, just because I was non-German and would therefore emphasize the international character of the organization. They hoped in that way to escape complete annihilation, even if they had to survive in a society of herb addicts and believers in “natural healing.” I knew it would be a very difficult task if I were to accept this proposition. But having been vice-president for a number of years, I did not consider it particularly honourable conduct to get cold feet, and so I stepped in.

[1464] The first task confronting me was to increase the non-German membership in order to form an adequate counterweight. We added a Swedish group, and I opened negotiations with French representatives, but I looked most toward England and America. The first person I approached was Crichton-Miller, and I did not find him wanting. He understood the situation and my motives. The Germans became more and more difficult and tried to overwhelm us with a large Italian and even a Japanese membership. Since nothing was known of modern medical psychology in either of those contries, the long lists of new members were composed by order and consisted of people who were absolutely innocent of the slightest professional knowledge of modern psychotherapy. Shortly before the outbreak of the war, it came to a decisive showdown with the Germans in Zurich. Being the British representative, Crichton-Miller lent me personally his invaluable help to ward off the German intrigue. I am forever grateful to him for his sturdy co-operation and his truly loyal friendship. That was the man I shall never forget.

[1465] During the war we naturally saw nothing of each other, and it was only afterwards that I received the shocking news of his fatal disease. I wanted very much to see him again but was overburdened with urgent work and hampered by the consequences of an injury to my heart. I found no occasion to go to England. Fortunately enough, in 1949 he could manage to come out to Switzerland, to the Bernese Oberland, where I went to meet him and his wife. I found him in an advanced stage of his illness. As he had expressed the urgent wish to talk to me, I was eager to hear from him what it was. After lunch we withdrew. He took out a sheet of paper with a closely written text. As our talks hitherto had never been intimate or personal, I was surprised when he plunged straight *in medias res* and asked me to answer a number of questions on religion. It was a complete survey of the *religio medici*, of all the religious conclusions an old doctor might draw from his innumerable experiences of suffering and death and from the inexorable reality of life's reverses. I knew we were talking *in conspectu mortis* of ultimate things, at the end of days. Then we took leave of each other, shook hands amiably and politely, as if after a delightful lunch with a distant yet friendly acquaintance. *Vale amice!*

January 1960

XII

PSYCHOLOGY AND RELIGION

(related to Volume II of the Collected Works)

WHY I AM NOT A CATHOLIC[1]

[1466] *Firstly:* Because I am a practical Christian to whom love and justice to his brother mean more than dogmatic speculations about whose ultimate truth or untruth no human being can ever have certain knowledge. The relation to my brother and the unity of the true "catholic" Christendom is to me infinitely more important than "justification by *fide sola.*" As a Christian I have to share the burden of my brother's wrongness, and that is most heavy when I do not know whether in the end he is not more right than I. I hold it to be immoral, in any case entirely unchristian, to put my brother in the wrong (i.e., to call him fool, ass, spiteful, obdurate, etc.) simply because I suppose myself to be in possession of the absolute truth. Every totalitarian claim gradually isolates itself because it excludes so many people as "defectors, lost, fallen, apostate, heretic," and so forth. The totalitarian maneuvers himself into a corner, no matter how large his original following. I hold all confessionalism to be completely unchristian.

[1467] *Secondly:* Because I am a doctor. If I possessed the absolute truth I could do nothing further than to press into my patient's hand a book of devotion or confessional guidance, just what is no longer of any help to him. When, on the other hand, I discover in his untruth a truth, in his confusion an order, in his lostness something that has been found, then I have helped him. This requires an incomparably greater self-abnegation and self-surrender for my brother's sake than if I assessed, correctly from the standpoint of one confession, the motivations of another.

[1468] You underestimate the immense number of those of goodwill, but to whom confessionalism blocks the doors. A Christian has to concern himself, especially if he is a physician of souls, with the spirituality of the reputedly unspiritual (spirit = confessionalism!) and he can do this only if he speaks their language and certainly not if, in the deterrent way of confessionalism, he sounds the kerygmatic trumpet, hoarse with age. Whoever talks in today's world of an absolute and single truth is speaking in an obsolete dialect and not in any way in the language of mankind. Christianity possesses a εὐαγγέλιον, good tidings from God, but no textbook of a dogma with claim to totality. Therefore it is hard to understand why God should never have sent more than one message. Christian modesty in any case strictly forbids assuming that God did not send εὐαγγέλια in other languages, not just in Greek, to other nations. If we think otherwise our thinking is in the deepest sense unchristian. The Christian—my idea of Christian—knows no curse formulas; indeed he does not even sanction the curse put on the innocent fig-tree by the rabbi Jesus, nor does he lend his ear to the missionary Paul of Tarsus when he forbids cursing to the Christian and then he himself curses the next moment.

[1469] *Thirdly:* Because I am a man of science.

[1470] The Catholic doctrine, as you present it to me so splendidly, is familiar to me to that extent. I am convinced of its "truth" in so far as it formulates determinable psychological facts, and thus far I accept this truth without further ado. But where I lack such empirical psychological foundations it does not help me in the least to believe in anything beyond them, for that would not compensate for my missing knowledge; nor could I ever surrender to the self-delusion of knowing something where I merely believe. I am now nearly seventy years old, but the charisma of belief has never arisen in me. Perhaps I am too overweening, too conceited; perhaps you are right in thinking that the cosmos circles around the God Jung. But in any case I have never succeeded in thinking that what I believe, feel, think, and understand is the only and final truth and that I enjoy the unspeakable privilege of God-likeness by being the possessor of the sole truth. You see that, although I can estimate the charisma of faith and its blessedness, the acceptance of "faith" is impossible for me because it says nothing to me.

[1471] You will naturally remonstrate that, after all, I talk about "God." I do this with the same right as humanity has from the beginning equated the numinous effects of certain psychological facts with an unknown primal cause called God. This cause is beyond my understanding, and therefore I can say nothing further about it except that I am convinced of the existence of such a cause, and indeed with the same logic by which one may conclude from the disturbance of a planet’s course the existence of a yet unknown heavenly body. To be sure, I do not believe in the absolute validity of the law of causality, which is why I guard against “positing” God as cause, for by this I would have given him a precise definition.

[1472] Such restraint is surely an offense to confessors of the Faith. But according to the fundamental Christian commandment I must not only bear with and understand my schismatic Protestant brother, but also my brothers in Arabia and India. They, too, have received strange but no less notable tidings which it is my obligation to understand. As a European, I am burdened most heavily by my unexpectedly dark brother, who confronts me with his antichristian Neo-Paganism. This extends far beyond the borders of Germany as the most pernicious schism that has ever beset Christianity. And though I deny it a thousand times, *it is also in me*. One cannot come to terms with this conflict by imputing wrong to someone else and the undoubted right to onself. This conflict I can solve first of all only within myself and not in another.

THE DEFINITION OF DEMONISM[1]

[1473] Demonism (synonymous with daemonomania = possession) denotes a peculiar state of mind characterized by the fact that certain psychic contents, the so-called complexes, take over the control of the total personality in place of the ego, at least temporarily, to such a degree that the free will of the ego is suspended. In certain of these states ego-consciousness is present, in others it is eclipsed. Demonism is a primordial psychic phenomenon and frequently occurs under primitive conditions. (Good descriptions in the New Testament, Luke 4:34, Mark 1:23, 5:2, etc.) The phenomenon of demonism is not always spontaneous, but can also be deliberately induced as a “trance,” for instance in shamanism, spiritualism, etc. (Cf. J. Hastings, *Encyclopaedia of Religion and Ethics;* Schürer. “Zur Vorstellung von der Besessenheit im Neuen Testament,” *Jahrbuch für protestantische Theologie*, 1892.)

[1474] Medically, demonism belongs partly to the sphere of the psychogenic neuroses, partly to that of schizophrenia. Demonism can also be epidemic. One of the most celebrated epidemics of the Middle Ages was the possession of the Ursulines of London, 1632. The epidemic form includes the induced collective psychoses of a religious or political nature, such as those of the twentieth century. (Cf. G. le Bon, *The Crowd, a Study of the Popular Mind*, 1896; Otto Stoll, *Suggestion und Hypnotismus in der Völkerpsychologie*, 2nd edn., 1904.)

FOREWORD TO JUNG: “SYMBOLIK DES GEISTES” (1948)

[1475] The present volume, the sixth of the *Psychologische Abhandlungen*, contains five essays which are concerned with the symbolism of the spirit: a study of Satan in the Old Testament by Dr. Riwkah Schärf,[1] and four essays from my pen. The first essay in the book, “The Phenomenology of the Spirit in Fairytales,”[2] gives an account of the “spirit archetype,” or rather, of a dream and fairytale motif whose behaviour is such that one has to conceive of it as “spirit.” Examples are also given of the dramatic entanglements to which the appearance of this motif leads. The second essay describes how, in the medieval natural philosophy of the alchemists, the primitive “nature-spirit” developed into the “Spirit Mercurius.”[3] As the original texts show, a spirit-figure came into being that was directly opposed to the Christian view of the spirit. The third contribution, by Dr. Schärf, describes the historical development of the ungodly spirit, Satan, as depicted in the texts of the Old Testament. The fourth essay, “A Psychological Approach to the Dogma of the Trinity,”[4] gives a brief sketch of the historical development of the trinitarian concept before and after Christ, followed by a synopsis of psychological viewpoints that need to be taken into account for a rational comprehension of the idea of the Trinity. It goes without saying that in any such discussion, metaphysical views cannot be considered, because, within the confines of a scientific psychology and its tasks, an idea characterized as “metaphysical” can claim the significance only of a psychic phenomenon. Equally the psychologist does not presume to say anything “metaphysical,” i.e., transcending his proper province, about his subject-matter—that lies outside his competence. In so far—and only so far—as the Trinity is not merely an object of belief but, over and above that, a human concept falling within the purview of psychology, can it be subjected to scientific observation. This does not affect the object of belief in any way. The reader will do well to keep this limitation of the theme constantly in mind.

[1476] The final contribution[5] is a description and analysis of a Chinese, but originally Indian, text which describes a way of meditation for the attainment of Buddhahood. I have added this essay for the purpose of rounding out the picture for my reader, showing him an Eastern aspect of it.

[1477] It now remains for me to correct an error. In my book *The Psychology of the Transference*[6] I promised to publish my new work, *Mysterium Coniunctionis*,[7] as volume 6 of the “Psychologische Abhandlungen.” Owing to illness and other causes I had to alter plans and am therefore publishing *Symbolik des Geistes* in its stead. The above-mentioned work will not go to press until later.

June 1947

FOREWORD TO QUISPEL: “TRAGIC CHRISTIANITY”[1]

[1478] The author of this essay has asked me to start off his book with a few introductory words. Although I am not a philologist, I gladly accede to this request because Dr. Quispel has devoted particular attention to a field of work which is familiar also to me from the psychological standpoint. Gnosticism is still an obscure affair and in need of explanation, despite the fact that sundry personages have already approached it from the most diverse angles and tried their hands at explanations with doubtful success. One even has the impression that the ban on heresy still hangs over this wide domain, or at least the disparagement which specialists are accustomed to feel for annoying incomprehensibilities. We have an equivalent of this situation in psychiatry, which has ostentatiously neglected the psychology of the psychoses and shows pronounced resistances to all attempts in this direction. This fact, though astonishing in itself, is, however, comprehensible when one considers the difficulties to be overcome once one tries to fathom the psychology of delusional ideas. We can understand mental illness only if we have some understanding of the mind in general. Delusional ideas cannot be explained in terms of themselves, but only in terms of our knowledge of the normal mind. Here the only phenomenological method that promises success, as opposed to philosophical and religious prejudice, has made next to no headway, indeed it has still not even been understood. The fundamental reason for this is that the doctor, to whom alone psychopathological experiences are accessible, seldom or never has the necessary epistemological premises at his command. Instead of which, if he reflects at all and does not merely observe and register, he has usually succumbed to a philosophical or religious conviction and fills out the gaps in his knowledge with professions of faith.

[1479] What is true of psychopathology can—*mutatis mutandis*—be applied directly to the treatment which Gnosticism has undergone. Its peculiar mental products demand the same psychological understanding as do psychotic delusional formations. But the philologist or theologian who concerns himself with Gnosticism generally possesses not a shred of psychiatric knowledge, which must always be called upon in explaining extraordinary mental phenomena. The explanation of Gnostic ideas "in terms of themselves," i.e., in terms of their historical foundations, is futile, for in that way they are reduced only to their less developed forestages but not understood in their actual significance.

[1480] We find a similar state of affairs in the psychopathology of the neuroses, where, for instance, Freud's psychoanalysis reduces the neurotic symptomatology only to its infantile forestages and completely overlooks its functional, that is, its *symbolic* value. So long as we know only the causality or the historical development of a normal biological or psychic phenomenon, but not its functional development, i.e., its purposive significance, it is not really understood. The same is true of Gnostic ideas: they are not mere symptoms of a certain historical development, but creative new configurations which were of the utmost significance for the further development of Western consciousness. One has only to think of the Jewish-Gnostic presuppositions in Paul's writings and of the immense influence of the "gnostic" gospel of John. Apart also from these important witnesses, and in spite of being persecuted, branded as heresy, and pronounced dead within the realm of the Church, Gnosticism did not die out at once by any means. Its philosophical and psychological aspects went on developing in alchemy up to the time of Goethe, and the Jewish syncretism of the age of Philo[2] found its continuation within orthodox Judaism in the Kabbala. Both these trends, if not exactly forestages of the modern psychology of the unconscious, are at all events well-nigh inexhaustible sources of knowledge for the psychologist. This is no accident inasmuch as parallel phenomena to the empirically established contents of the collective unconscious underlie the earliest Gnostic systems. The archetypal motifs of the unconscious are the psychic source of Gnostic ideas, of delusional ideas (especially of the paranoid schizophrenic forms), of symbol-formation in dreams, and of active imagination in the course of an analytical treatment of neurosis.

[1481] In the light of these reflections, I regret Dr. Quispel’s quotations from the Gnostics, that the “Autopator contained in himself all things, in [a state of] unconsciousness (ἐν ἀγνωσία)”[3] and that “The Father was devoid of consciousness (ἀνεννόητος),”[4] as a fundamental discovery for the psychology of Gnosticism. It means nothing less than that the Gnostics in question derived the knowable ὑπερκόσμα from the unconscious, i.e., that these represented unconscious contents. This discovery results not only in the possibility but also in the necessity of supplementing the historical method of explanation by one that is based on a scientific psychology.

[1482] Psychology is indebted to the author for his endeavours to facilitate the understanding of Gnosticism, not merely because we psychologists have made it our task to explain Gnosticism, but because we see in it a *tertium comparationis* which affords us the most valuable help in the practical understanding of modern individual symbol-formation.

May 1949

FOREWORD TO ABEGG: “OSTASIEN DENKT ANDERS”[1]

[1483] The author of this book, the entire text of which unfortunately I have not seen, has talked to me about her project and about her ideas with regard to the difference between Eastern and Western psychology. Thus I was able to note many points of agreement between us, and also a competence on her part to make judgments which is possible only to one who is a European and at the same time possesses the invaluable advantage of having spent more than half a lifetime in the Far East, in close contact with the mind of Asia. Without such first-hand experience it would be a hopeless task to approach the problem of Eastern psychology. One must be deeply and directly moved by the strangeness, one might almost say by the incomprehensibility, of the Eastern psyche. Decisive experiences of this kind cannot be transmitted through books; they come only from living in immediate, daily relationship with the people. Having had unusual advantages in this respect, the author is in a position to discuss what is perhaps the basic, and is in any case an extremely important, question of the difference between Eastern and Western psychology. I have often found myself in situations where I had to take account of this difference, as in the study of Chinese and East Indian literary texts and in the psychological treatment of Asiatics. Among my patients, I am sorry to say, I have never had a Chinese or a Japanese, nor have I had the privilege of visiting either China or Japan. But at least I have had the opportunity to experience with painful clarity the insufficiency of my knowledge. In this field we still have everything to learn, and whatever we learn will be to our immense advantage. Knowledge of Eastern psychology provides the indispensable basis for a critique of Western psychology, as indeed for any objective understanding of it. And in view of the truly lamentable psychic situation of the West, the importance of a deeper understanding of our Occidental prejudices can hardly be overestimated.

[1484] Long experience with the products of the unconscious has taught me that there is a very remarkable parallelism between the specific character of the Western unconscious psyche and the "manifest" psyche of the East. Since our experience shows that the biological role which the unconscious plays in the psychic economy is compensatory to consciousness, one can venture the hypothesis that the mind of the Far East is related to our Western consciousness as the unconscious is, that is, as the left hand to the right.

[1485] Our unconscious has, fundamentally, a tendency toward wholeness, as I believe I have been able to prove. One would be quite justified in saying the same thing about the Eastern psyche, but with this difference: that in the East it is consciousness that is characterized by an apperception of totality, while the West has developed a differentiated and therefore necessarily one-sided attention or awareness. With it goes the Western concept of causality, a principle of cognition irreconcilably opposed to the principle of synchronicity which forms the basis and the source of Eastern "incomprehensibility," and explains as well the "strangeness" of the unconscious with which we in the West are confronted. The understanding of synchronicity is the key which unlocks the door to the Eastern apperception of totality that we find so mysterious. The author seems to have devoted particular attention to just this point. I do not hesitate to say that I look forward to the publication of her book with the greatest interest.

March 1949

FOREWORD TO ALLENBY: "A PSYCHOLOGICAL STUDY OF THE ORIGINS OF MONOTHEISM"[1]

[1486] It can no longer be doubted today that meaningful connections are discoverable in dreams and other spontaneous manifestations of the unconscious. This raises the question of the origin of unconscious contents. Are they genuine creations of the unconscious psyche, or thoughts that were originally conscious but subsequently became unconscious for one reason or another?

[1487] The individual dream-thoughts, or at least their elements, are always of conscious origin, otherwise they could not be represented or recognized. Also, a whole sequence of images connected together in a meaningful way, or an entire scene, frequently derives from the conscious memory. But when we consider the meaning of the dream as a whole, the question of derivation becomes much more difficult to answer. So far as can be established empirically, the function of dreams is to compensate the conscious situation, as though there were a natural drive to restore the balance. The more one-sided the conscious situation is, the more the compensation takes on a *complementary* character. Obvious examples of this can be found in people who naïvely deceive themselves or who hold to some fanatical belief. As we know, the most lurid scenes of temptation are depicted in the dreams of ascetics. In such cases it would be very difficult to prove that the meaning of the dream derives from a conscious thought that subsequently became unconscious, for obviously no such reflection or self-criticism ever took place and for that very reason had to be performed by the dream. The hypothesis becomes completely untenable when the dreams produce meaningful connections which are absolutely unknown to the dreamer or which *cannot* be known to him. The clearest phenomena of this kind, convincing even to the layman, are telepathic dreams which give information concerning events at a distance or in the future, beyond the range of sense-perception.

[1488] These phenomena offer striking proof that there are meaningful connections in the unconscious which are not derived from conscious reflection. The same is true of dream motifs found otherwise only in myths and fairytales, and exhibiting characteristic forms of which the dreamer has no conscious knowledge. Here we are not dealing in any sense with ideas, but with instinctual factors, the fundamental forms that underlie all imaginative representation; in short, with a pattern of mental behaviour which is ingrained in human nature. This accounts for the universal occurrence of these archetypes of the imagination. Their *a priori* presence is due to the fact that they, like the instincts, are inherited, and therefore constantly produce mythological motifs in every individual as soon as his imagination is given free play, or whenever the unconscious gains the upper hand.

[1489] Modern psychological experience has shown that not only the meaning of the dream, but also certain dream-contents, must derive entirely from the unconscious, for the simple reason that they could not have been known to consciousness and therefore cannot be derived from it.

[1490] However slight the effect of a particular dream may be, the unconscious compensation is of great importance for a man’s conscious life and for what one calls his “fate.” The archetypes naturally play a considerable role here, and it is no accident that these determining factors have always been personified in the form of gods and demons.

[1491] Since the relation of the unconscious to consciousness is not a mechanical one and not purely complementary, but performs a meaningful and compensatory function, the question arises as to who might be the “author” of the effects produced. In our ordinary experience, phenomena of this kind occur only in the realm of the thinking and willing ego-consciousness. There are, however, very similar “intelligent” acts of compensation in nature, especially in the instinctual activities of animals. For us, at least, they do not have the character of conscious decisions, but appear to be just like human activities that are exclusively controlled by the unconscious. The great difference between them is that the instinctual behaviour of animals is predictable and repetitive, whereas the compensatory acts of the unconscious are individual and creative.

[1492] The “author” in both cases seems to be the pattern of behaviour, the archetype. Although in human beings the archetype represents a collective and almost universal mode of action and reaction, its activity cannot as a rule be predicted; one never knows when an archetype will react, and which archetype it will be. But once it is constellated, it produces “numinous” effects of a determining character. Thus Freud not only stumbled on the Oedipus complex but also discovered the dual-mother motif of the hero myth in Leonardo da Vinci. But he made the mistake of deriving this motif from the fact that Leonardo had two mothers in reality, namely, his real mother and a stepmother. Actually, the dual-mother motif occurs not only in myths but also in the dreams and fantasies of individuals who neither have two mothers nor know anything about the archetypal motifs in mythology. So there is no need of two mothers in reality to evoke the dual-mother motif. On the contrary, the motif shows the tendency of the unconscious to reproduce the dual-mother situation, or the story of double descent or child-substitution, usually for the purpose of compensating the subject’s feelings of inferiority.

[1493] As the archetypes are instinctive, inborn forms of psychic behaviour, they exert a powerful influence on the psychic processes. Unless the conscious mind intervenes critically and with an effort of will, things go on happening as they have always happened, whether to the advantage or disadvantage of the individual. The advantages seem to preponderate, for otherwise the development of consciousness could hardly have come about. The advantage of “free” will is indeed so obvious that civilized man is easily persuaded to leave his whole life to the guidance of consciousness, and to fight against the unconscious as something hostile, or else dismiss it as a negligible factor. Because of this, he is in danger of losing all contact with the world of instinct—a danger that is still further increased by his living an urban existence in what seems to be a purely manmade environment.

[1494] This loss of instinct is largely responsible for the pathological condition of our contemporary culture. The great psychotherapeutic systems embodied in religion still struggle to keep the way open to the archetypal world of the psyche, but religion is increasingly losing its grip with the result that much of Europe today has become dechristianized or actually anti-Christian. Seen in this light, the efforts of modern psychology to investigate the unconscious seem like salutary reactions of the European psyche, as if it were seeking to re-establish the connection with its lost roots. It is not simply a matter of rescuing the natural instincts (this seems to have been Freud's particular preoccupation), but of making contact again with the archetypal functions that set bounds to the instincts and give them form and meaning. For this purpose a knowledge of the archetypes is indispensable.

[1495] The question of the existence of an archetypal *God-image* is naturally of prime importance as a factor determining human behaviour. From the history of symbols as well as from the case histories of patients it can be demonstrated empirically that such a God-image actually exists, an image of wholeness which I have called the symbol of the *self*. It occurs most frequently in the form of *mandala* symbols. The author of this book has made it her task to investigate the psychological aspect of the God-image on the one hand and the theological aspect of the self on the other—a task which in my view is as necessary as it is timely. At a time when our most valuable spiritual possessions are being squandered, we would do well to consider very carefully the meaning and purpose of the things we so heedlessly seek to cast overboard. And before raising the cry that modern psychology destroys religious ideas by "psychologizing" them, we should reflect that it is just this psychology which is trying to renew the connection with the realities of the psyche, lest consciousness should flutter about rootlessly and helplessly in the void, a prey to every imaginable intellectualism. Atrophy of instinct is equivalent to pathological suggestibility, the devastating effects of which may be witnessed in the recurrent psychic epidemics of totalitarian madness.

[1496] I can only hope this book finds a wide circle of serious readers.

May 1950

THE MIRACULOUS FAST OF BROTHER KLAUS[1]

[1497] The fact that Brother Klaus, on his own admission and according to the reports of reliable witnesses, lived without material sustenance for twenty years is something that cannot be brushed aside however uncomfortable it may be. In the case of Therese of Konnersreuth[2] there are also reports, whose reliability of course I can neither confirm nor contest, that for a long period of time she lived simply and solely on holy wafers. Such things naturally cannot be understood with our present knowledge of physiology. One would be well advised, however, not to dismiss them as utterly impossible on that account. There are very many things that earlier were held to be impossible which nevertheless we know and can prove to be possible today.

[1498] Naturally I have no explanation to offer concerning such phenomena as the fast of Brother Klaus, but I am inclined to think it should be sought in the realm of parapsychology. I myself was present at the investigation of a medium who manifested physical phenomena. An electrical engineer measured the degree of ionization of the atmosphere in the immediate vicinity of the medium. The figures were everywhere normal except at one point on the right side of the thorax, where the ionization was about sixty times the normal. At this point, when the (parapsychological) phenomena were in progress, there was an emission of ectoplasm capable of acting at a distance. If such things can occur, then it is also conceivable that persons in the vicinity of the medium might act as a source of ions—in other words, nourishment might be effected by the passage of living molecules of albumen from one body to another. In this connection it should be mentioned that in parapsychological experiments decreases of weight up to several kilograms have been observed during the (physical) phenomena, in the case both of the medium and of some of the participants, who were all sitting on scales. This seems to me to offer a possible approach to an explanation. Unfortunately these things have been far too little investigated at present. This is a task for the future.

CONCERNING “ANSWER TO JOB”[1]

[1498a] This is not a “scientific” book but a personal confrontation with the traditional Christian world view, occasioned by the impact of the new dogma of the Assumption. It echoes the reflections of a physician and theological layman, who had to find the answers to many questions on religious matters and was thus compelled to wrestle with the meaning of religious ideas from his particular, non-confessional standpoint. In addition, the questions were motivated by contemporary events: falsehood, injustice, slavery, and mass murder engulfed not only major parts of Europe but continue to prevail in vast areas of the world. What has a benevolent and almighty God to say to these problems? This desperate question, asked a thousand times, is the concern of this book.

RELIGION AND PSYCHOLOGY: A REPLY TO MARTIN BUBER[1]

[1499] Some while ago the readers of your magazine were given the opportunity to read a posthumous article by Count Keyserling,[2] in which I was characterized as "unspiritual." Now, in your last issue, I find an article by Martin Buber[3] which is likewise concerned with my classification. I am indebted to his pronouncements at least in so far as they raise me out of the condition of unspirituality, in which Count Keyserling saw fit to present me to the German public, into the sphere of spirituality, even though it be the spirituality of early Christian Gnosticism, which has always been looked at askance by theologians. Funnily enough this opinion of Buber's coincides with another utterance from an authoritative theological source accusing me of agnosticism—the exact opposite of Gnosticism.

[1500] Now when opinions about the same subject differ so widely, there is in my view ground for the suspicion that none of them is correct, and that there has been a misunderstanding. Why is so much attention devoted to the question of whether I am a Gnostic or an agnostic? Why is it not simply stated that I am a psychiatrist whose prime concern is to record and interpret his empirical material? I try to investigate facts and make them more generally comprehensible. My critics have no right to slur over this in order to attack individual statements taken out of context.

[1501] To support his diagnosis Buber even resorts to a sin of my youth, committed nearly forty years ago, which consists in my once having perpetrated a poem.[4] In this poem I expressed a number of psychological *aperçus* in "Gnostic" style, because I was then studying the Gnostics with enthusiasm. My enthusiasm arose from the discovery that they were apparently the first thinkers to concern themselves (after their fashion) with the contents of the collective unconscious. I had the poem printed under a pseudonym and gave a few copies to friends, little dreaming that it would one day bear witness against me as a heretic.

[1502] I would like to point out to my critic that I have in my time been regarded not only as a Gnostic and its opposite, but also as a theist and an atheist, a mystic and a materialist. In this concert of contending opinions I do not wish to lay too much stress on what I consider myself to be, but will quote a judgment from a leading article in the *British Medical Journal* (9 February 1952), a source that would seem to be above suspicion. “Facts first and theories later is the keynote of Jung’s work. He is an empiricist first and last.” This view meets with my approval.

[1503] Anyone who does not know my work will certainly ask himself how it is that so many contrary opinions can be held about one and the same subject. The answer to this is that they are all thought up by “metaphysicians,” that is, by people who for one reason or another think they know about unknowable things in the Beyond. I have never ventured to declare that such things do *not* exist; but neither have I ventured to suppose that any statement of mine could in any way touch them or even represent them correctly. I very much doubt whether our conception of a thing is identical with the nature of the thing itself, and this for very obvious scientific reasons.

[1504] But since views and opinions about metaphysical or religious subjects play a very great role in empirical psychology,[5] I am obliged for practical reasons to work with concepts corresponding to them. In so doing I am aware that I am dealing with anthropomorphic ideas and not with actual gods and angels, although, thanks to their specific energy, such (archetypal) images behave so autonomously that one could describe them metaphorically as “psychic daimonia.” The fact that they are autonomous should be taken very seriously; first, from the theoretical standpoint, because it explains the dissociability of the psyche as well as actual dissociation, and second, from the practical one, because it forms the basis for a dialectical discussion between the ego and the unconscious, which is one of the mainstays of the psychotherapeutic method. Anyone who has any knowledge of the structure of a neurosis will be aware that the pathogenic conflict arises from the counterposition of the unconscious relative to consciousness. The so-called “forces of the unconscious” are not intellectual concepts that can be arbitrarily manipulated, but dangerous antagonists which can, among other things, work frightful devastation in the economy of the personality. They are everything one could wish for or fear in a psychic "Thou." The layman naturally thinks he is the victim of some obscure organic disease; but the theologian, who suspects it is the devil's work, is appreciably nearer to the psychological truth.

[1505] I am afraid that Buber, having no psychiatric experience, fails to understand what I mean by the "reality of the psyche" and by the dialectical process of individuation. The fact is that the ego is confronted with psychic powers which from ancient times have borne sacred names, and because of these they have always been identified with metaphysical beings. Analysis of the unconscious has long since demonstrated the existence of these powers in the form of archetypal images which, be it noted, *are not identical with the corresponding intellectual concepts*. One can, of course, believe that the concepts of the conscious mind are, through the inspiration of the Holy Ghost, direct and correct representations of their metaphysical referent. But this conviction is possible only for one who already possesses the gift of faith. Unfortunately I cannot boast of this possession, for which reason I do not imagine that when I say something about an archangel I have thereby confirmed that a metaphysical fact. I have merely expressed an opinion about something that can be experienced, that is, about one of the very palpable "powers of the unconscious". These powers are numinous "types"—unconscious contents, processes, and dynamisms—and such types are, if one may so express it, immanent-transcendent. Since my sole means of cognition is experience I may not overstep its boundaries, and cannot therefore pretend to myself that my description coincides with the portrait of a real metaphysical archangel. What I have described is a psychic factor only, but one which exerts a considerable influence on the conscious mind. Thanks to its autonomy, it forms the counterposition to the subjective ego because it is a piece of the *objective psyche*. It can therefore be designated as a "Thou." For me its reality is amply attested by the truly diabolical deeds of our time: the six million murdered Jews, the uncounted victims of the slave labour camps in Russia, as well as the invention of the atom bomb, to name but a few examples of the darker side. But I have also seen the other side which can be expressed by the words beauty, goodness, wisdom, grace. These experiences of the depths and heights of human nature justify the metaphorical use of the term “daimon.”

[1506] It should not be overlooked that what I am concerned with are psychic phenomena which can be proved empirically to be the bases of metaphysical concepts, and that when, for example, I speak of “God” I am unable to refer to anything beyond these demonstrable psychic models which, we have to admit, have shown themselves to be devastatingly real. To anyone who finds their reality incredible I would recommend a reflective tour through a lunatic asylum.

[1507] The “reality of the psyche” is my working hypothesis, and my principal activity consists in collecting factual material to describe and explain it. I have set up neither a system nor a general theory, but have merely formulated auxiliary concepts to serve me as tools, as is customary in every branch of science. If Buber misunderstands my empiricism as Gnosticism, it is up to him to prove that the facts I describe are nothing but inventions. If he should succeed in proving this with empirical material, then indeed I am a Gnostic. But in that case he will find himself in the uncomfortable position of having to dismiss all religious experiences as self-deception. Meanwhile I am of the opinion that Buber’s judgment has been led astray. This seems especially evident in his apparent inability to understand how an “autonomous psychic content” like the God-image can burst upon the ego, and that such a confrontation is a living experience. It is certainly not the task of an empirical science to establish how far such a psychic content is dependent on and determined by the existence of a metaphysical deity. That is the concern of theology, revelation, and faith. My critic does not seem to realize that when he himself talks about God, his statements are dependent firstly on his conscious and then on his unconscious assumptions. Of *which* metaphysical deity he is speaking I do not know. If he is an orthodox Jew he is speaking of a God to whom the incarnation in the year 1 has not yet been revealed. If he is a Christian, then his deity knows about the incarnation of which Yahweh still shows no sign. I do not doubt his conviction that he stands in a living relationship to a divine Thou, but now as before I am of the opinion that this relationship is primarily to an autonomous psychic content which is defined in one way by him and in another by the Pope. Consequently I do not permit myself the least judgment as to whether and to what extent it has pleased a metaphysical deity to reveal himself to the devout Jew as he was before the incarnation, to the Church Fathers as the Trinity, to the Protestants as the one and only Saviour without co-redemptrix, and to the present Pope as a Saviour with co-redemptrix. Nor should one doubt that the devotees of other faiths, including Islam, Buddhism, Hinduism, and so on, have the same living relationship to “God,” or to Nirvana and Tao, as Buber has to the God-concept peculiar to himself.

[1508] It is remarkable that he takes exception to my statement that God cannot exist apart from man and regards it as a transcendental assertion. Yet I say expressly that everything asserted about “God” is a human statement, in other words a psychological one. For surely the image we have or make for ourselves of God is never detached from man? Can Buber show me where, apart from man, God has made an image of himself? How can such a thing be substantiated and by whom? Here, just for once, and as an exception, I shall indulge in transcendental speculation and even in “poetry”: God has indeed made an inconceivably sublime and mysteriously contradictory image of himself, without the help of man, and implanted it in man’s unconscious as an archetype, an ἀρχέτυπον φῶς, archetypal light: not in order that theologians of all times and places should be at one another’s throats, but in order that the unpresumptuous man might glimpse an image, in the stillness of his soul, that is akin to him and is wrought of his own psychic substance. This image contains everything he will ever imagine concerning his gods or concerning the ground of his psyche.

[1509] This archetype, whose existence is attested not only by ethnology but by the psychic experience of individuals, satisfies me completely. It is so humanly close and yet so strange and “other”; also, like all archetypes, it possesses the utmost determinative power with which it is absolutely necessary that we come to terms. The dialectical relationship to the autonomous contents of the collective unconscious is therefore, as I have said, an essential part of therapy.

[1510] Buber is mistaken in thinking that I start with a "fundamentally Gnostic viewpoint" and then proceed to "elaborate" metaphysical assertions. One should not misconstrue the findings of empiricism as philosophical premises, for they are not obtained by deduction but from clinical and factual material. I would recommend him to read some autobiographies of the mentally ill, such as John Custance's *Wisdom, Madness and Folly* (1951), or D. P. Schreber's *Memoirs of My Nervous Illness* (first published 1903), which certainly do not proceed from Gnostic hypotheses any more than I do; or he might try an analysis of mythological material, such as the excellent work of Dr. Erich Neumann, his neighbour in Tel Aviv: *Amor and Psyche* (1952). My contention that the products of the unconscious are analogous and related to certain metaphysical ideas is founded on my professional experience. In this connection I would point out that I know quite a number of influential theologians, Catholics as well as Protestants, who have no difficulty in grasping my empirical standpoint. I therefore see no reason why I should take my method of exposition to be quite so misleading as Buber would have us believe.

[1511] There is one misunderstanding which I would like to mention here because it comes up so often. This is the curious assumption that when a projection is withdrawn nothing more of the object remains. When I correct my mistaken opinion of a man I have not negated him and caused him to vanish; on the contrary, I see him more nearly as he is, and this can only benefit the relationship. So if I hold the view that all statements about God have their origin in the psyche and must therefore be distinguished from God as a metaphysical being, this is neither to deny God nor to put man in God's place. I frankly confess that it goes against the grain with me to think that the metaphysical God himself is speaking through everyone who quotes the Bible or ventilates his religious opinions. Faith is certainly a splendid thing if one has it, and knowledge by faith is perhaps more perfect than anything we can produce with our laboured and wheezing empiricism. The edifice of Christian dogma, for instance, undoubtedly stands on a much higher level than the somewhat wild "philosophoumena" of the Gnostics. Dogmas are spiritual structures of supreme beauty, and they possess a wonderful meaning which I have sought to fathom in my fashion. Compared with them our scientific endeavors to devise models of the objective psyche are unsightly in the extreme. They are bound to earth and reality, full of contradictions, incomplete, logically and aesthetically unsatisfying. The empirical concepts of science and particularly of medical psychology do not proceed from neat and seemly principles of thought, but are the outcome of our daily labours in the sloughs of ordinary human existence and human pain. They are essentially irrational, and the philosopher who criticizes them as though they were philosophical concepts tilts against windmills and gets into the greatest difficulties, as Buber does with the concept of the self. Empirical concepts are names for existing complexes of facts. Considering the fearful paradoxicality of human existence, it is quite understandable that the unconscious contains an equally paradoxical God-image which will not square at all with the beauty, sublimity, and purity of the dogmatic concept of God. The God of Job and of the 89th Psalm is clearly a bit closer to reality, and his behaviour does not fit in badly with the God-image in the unconscious. Of course this image, with its Anthropos symbolism, lends support to the idea of the incarnation. I do not feel responsible for the fact that the history of dogma has made some progress since the days of the Old Testament. This is not to preach a new religion, for to do that I would have to follow the old-established custom of appealing to a divine revelation. I am essentially a physician, whose business is with the sickness of man and his times, and with remedies that are as real as the suffering. Not only Buber, but every theologian who baulks at my odious psychology is at liberty to heal my patients with the word of God. I would welcome this experiment with open arms. But since the ecclesiastical cure of souls does not always produce the desired results, we doctors must do what we can, and at present we have no better standby than that modest “gnosis” which the empirical method gives us. Or have any of my critics better advice to offer?

[1512] As a doctor one finds oneself in an awkward position, because unfortunately one can accomplish nothing with that little word “ought.” We cannot demand of our patients a faith which they reject because they do not understand it, or which does not suit them even though we may hold it ourselves. We have to rely on the curative powers inherent in the patient’s own nature, regardless of whether the ideas that emerge agree with any known creed or philosophy. My empirical material seems to include a bit of everything—it is an assortment of primitive, Western, and Oriental ideas. There is scarcely any myth whose echoes are not heard, nor any heresy that has not contributed an occasional oddity. The deeper, collective layers of the human psyche must surely be of a like nature. Intellectuals and rationalists, happy in their established beliefs, will no doubt be horrified by this and will accuse me of reckless eclecticism, as though I had somehow invented the facts of man’s nature and mental history and had compounded out of them a repulsive theosophical brew. Those who possess faith or prefer to talk like philosophers do not, of course, need to wrestle with the facts, but a doctor is not at liberty to dodge the grim realities of human nature.

[1513] It is inevitable that the adherents of traditional religious systems should find my formulations hard to understand. A Gnostic would not be at all pleased with me, but would reproach me for having no cosmogony and for the cluelessness of my gnosis in regard to the happenings in the Pleroma. A Buddhist would complain that I was deluded by Maya, and a Taoist that I was too complicated. As for an orthodox Christian, he can hardly do otherwise than deplore the nonchalance and lack of respect with which I navigate through the empyrean of dogmatic ideas. I must, however, once more beg my unmerciful critics to remember that I start from *facts* for which I seek an interpretation.

ADDRESS AT THE PRESENTATION OF THE JUNG CODEX[1]

Mr. President, viri magnifici, Ladies and Gentlemen!

[1514] It gives me much pleasure to accept this precious gift in the name of our Institute. For this I thank you, and also for the surprising and undeserved honour you have done me in baptising the Codex with my name. I would like to thank Dr. Meier personally for his persistent and successful efforts to acquire the Codex, and for organizing this celebration. He has asked me to say something about the psychological significance of Gnostic texts.

[1515] At present, unfortunately, I know only three of the treatises contained in the Codex. One of these is an important, so it seems, early Valentinian text that affords us some insight into the mentality of the second century A.D. It is called "The Gospel of Truth,"[2] but it is less a gospel than a treatise explaining the Christian message, its purpose being to assimilate this strange and hardly understandable message to the Hellenistic-Egyptian world of thought. It is evident that the author was appealing to the intellectual understanding of his reader, as if in remembrance of the words: "We preach Christ crucified, unto the Jews a stumbling-block, and unto the Greeks foolishness" (I Cor. 1:23). For him Christ was primarily a light-bringer, who went forth from the Father in order to illuminate the stupidity, darkness, and unconsciousness of mankind. This deliverance from *agnosia* relates the text to the accounts which Hippolytus has left of the Gnostics, and of the Naassenes and Peratics in particular, in his *Elenchos*.[3] There we also find most of what I call the "phenomena of assimilation." They consisted partly of allegories and partly of genuine symbols, and their purpose was to shed light on the essentially metaphysical figure of Christ and make it more comprehensible to the mentality of that epoch. For the modern mind this accumulation of symbols, parables, and synonyms has just the opposite effect, since it only deepens the darkness and entangles the light-bringer in a network of barely intelligible analogies. It is not likely that the Gnostic attempts at elucidation met with much success in the pagan world, especially as the Church very soon opposed them and whenever possible suppressed them. Luckily during this process some of the best pieces (to judge by their content) were preserved for posterity, so that today we are in a position to see in what way the Christian message was taken up by the unconscious of that age.

[1516] These phenomena are naturally of especial significance for psychologists and psychiatrists, who are professionally concerned with the psychic background, and this is the reason why our Institute is so interested in acquiring and translating Gnostic texts. Although suppressed and forgotten, the process of assimilation that began with Gnosticism continued all through the Middle Ages, and it can still be observed in modern times whenever the individual consciousness is confronted with its own shadow, or the inferior part of the personality. This happens spontaneously in certain cases, whether they be normal or pathological. The general rule, however, is that modern man needs expert help to become conscious of his darkness, because in most cases he has long since forgotten this basic problem of Christianity: the moral and intellectual *agnosia* of the merely natural man. Christianity, considered as a psychological phenomenon, contributed a great deal to the development of consciousness, and wherever this dialectical process has not come to a standstill we find new evidence of assimilation. Even in medieval Judaism a parallel process took place over the centuries, independently of the Christian one, in the Kabbala. Its nearest analogy in the Christian sphere was philosophical alchemy, whose psychological affinities with Gnosticism can easily be demonstrated.

[1517] The urgent therapeutic necessity of confronting the patient with his own dark side is a continuation of the Christian development of consciousness and leads to phenomena of assimilation similar to those found in Gnosticism, the Kabbala, and Hermetic philosophy. Since comparison with these earlier historical stages is of the greatest importance in interpreting the modern phenomena, the discovery of authentic Gnostic texts is of the utmost practical value to us in our researches. These few hints must suffice to explain our interest in a

Gnostic codex. A detailed account of these relationships may be found in a number of studies that have already been published.

LETTER TO PÈRE BRUNO[1]

5 November 1953

Dear Fr. Bruno,

[1518] Your questions interested me extremely. You ask for information about the method to be followed in order to establish the existence of an archetype. Instead of a theoretical discourse, I propose to give you a practical demonstration of my method by trying to tell you what I think about that probably historical personage, Elijah.

[1519] If the tradition were concerned with a person characterized rather by individual and more or less unique traits, to whom few or no legends, miraculous deeds, and exploits or relations or parallels with mythological figures were attached, there would be no reason to suppose the presence of an archetype. If on the other hand the biography of the person concerned contains mythical motifs and parallels, and if posterity has added elements that are clearly mythological, then there is no longer any doubt that we are dealing with an archetype.

[1520] *The prophet Elijah is a highly mythical person,* though that does not prevent his being a historical one at the same time, like for example St. John the Baptist or even Jesus, the rabbi of Nazareth. I call the mythical attributes “phenomena of assimilation.” (I have just published a study on the astrological assimilation of Christ as fish in my book *Aion*, 1951.)

[1521] There is no need to repeat to you the well-known Old Testament traditions. Let us rather glance at the Christian tradition in the New Testament and later. As a “hairy” man [2 Kings 1:8] Elijah is analogous to St. John the Baptist [Mark 1:6]. His calling of an apostle (Elisha), walking on the water, the discouragement (I Kings 19: 4ff.) prefigure analogous incidents in the life of Christ, who is also interpreted as a reappearance of Elijah, and his saying on the cross: “Eli, Eli …” as an invocation of Elijah. The name derives from El (= God). Chrysostom derives the name Elias [= Elijah] from Helios: “quod sicut sol ex oceano emergens versus supremum coelus tendit.”[2] At his birth he was hailed by angels. He was wrapped in fiery swaddling clothes and nourished by flames. He had *two souls* (!). (See J. Fr. Mieg, *De raptu Eliae*, 1660, and Schulinus, *De Elia corvorum alumno*, 1718.) In Roman days, there was a pagan sanctuary on Carmel, which seems to have consisted only of an altar (Tacitus, *Hist*. II, 78, “tantum ara et reverentia”).[3] Vespasian is said to have obtained an oracle in this sanctuary. Iamblichus (*Vita Pythagorica* III, 15) says that the mountain is sacred and represents a taboo area and that Pythagoras often stayed in the sacred solitude of Carmel. It is possible that the Druses have preserved in their sanctuary on the mountain the place of the altar of Elijah.

[1522] In *Pirkê Eliezer* 31, Elijah is the incarnation of an eternal soul-substance and is of the same nature as the angels. It was his spirit that called up the ram which was substituted for Isaac. He wears the ram’s skin as a girdle or apron. He is present at the circumcision as the “Angel of the Covenant” (*Pirkê Eliezer* 29). Even in our own day, a special chair is reserved for Elijah at the rite of circumcision, and at the feast of the Passover a goblet of wine is placed on the table and the head of the family opens the door to invite Elijah to enter and share the feast.

[1523] Legend calls him “violent,” “quarrelsome,” and “merciless.” It was because of these unfavourable qualities that he had to yield up his office of prophet to Elisha. He caused the sun to stand still during the sacrifice of Carmel. In the time to come he will awaken the dead. The boy he raised to life was Jonah (later swallowed by the monster). Since his ascension to heaven he is among the angels, and he hovers over the earth like an eagle spying out the secrets of men.

[1524] He is also considered to be a parallel of Moses. They have in common the murder of a man, their flight, being nourished by a woman, the vision of God, the calling together of the people by a mountain. Elijah and Moses were present at the transfiguration on Tabor.

[1525] Elijah helped Rabbi Meir by transforming himself into a hetaira. He is generally a helper in all sorts of human difficulties (healing even the toothache, enriching the poor, bringing leaves from paradise, building magic palaces, etc.) He also plays tricks by making people lose their purses. He slays on the spot a man who does not pray properly. Thus Elijah is identical with the figure of Khadir or Khidr in Islamic tradition.[4] When, yielding to the prayer of Rabbi Hiyya, he reveals the secret of resurrecting the dead, the angels intercede, carry the rabbi off, and give him a good hiding with fiery whips. The village dogs bark joyously when Elijah appears (in disguise). Three days before the appearing of the Messiah, Elijah will manifest himself on the *mountains* of Israel.

[1526] According to Moses ben Leon, Elijah belongs to the category of angels who recommended the creation of man. Moses Cordovero compares him to Enoch, but whereas the latter's body is consumed by fire, Elijah retains his earthly form so as to be ready to appear again. His body descends from the Tree of Life. Since he was not dead, he was supposed to dwell invisibly on Mount Carmel; for example, the Shunamite went to look for him and found him at Carmel (II Kings 4:25). (For the Jewish tradition, see Strack and Billerbeck, *Kommentar zum N.T.*, vol. IV, part 2, pp. 764ff. Also *Encyclopedia Judaica*, 1930, vol. 6.) In Hasidic tradition, Elijah was endowed with the *collective soul* of Israel. Every male child, when presented for the covenant with God, receives a part of the soul of Elijah and after attaining adult age and developing this soul, Elijah appears to him. Abraham ibn Ezra of Toledo is said to have been unable to develop this soul completely. (It is evident that Elijah represents both the collective unconscious and the "self," atman, purusha, of man. It is a question of the *individuation process*. See M. Buber, *Die Erzählungen der Chassidim* (1949), p. 402.[5] M. Buber is one of my relentless adversaries. He has not understood even what he wrote himself!).[6]

[1527] Islamic tradition depends in the first place on the Jewish commentaries. Ilyās (Elijah) has received from God power to control the rain. He causes a great drought. He ascends to heaven on a fiery horse and God transforms him into a half-human angel (according to al-Tabari). In the Koran, Sura 18, 64ff., he is replaced by al-Khadir. (In a Jewish legend it is Elijah who travels with Joshua ben Levi, in the Koran it is al-Khadir with Joshua ben Nun.) Ordinarily, Ilyās and al-Khadir are immortal twins. They spend Ramadan at Jerusalem every year and afterwards they take part in the pilgrimage to Mecca without being recognized. Ilyās is identified with Enoch and Idrīs (= Hermes Trismegistus). Later Ilyas and al-Khadir are identified with St. George (see *Encyclopedia of Islam*, Leiden and Leipzig, 1913).

[1528] In medieval Christian tradition, Elijah continues to haunt the imagination. For example, it is specially fascinated by his ascent to heaven, which is frequently represented. In illuminated MSS, the model is followed of the Mithraic representation of the ascent of Sol inviting Mithras to join him in the fiery chariot. (See Bousset, "Die Himmelsreise der Seele," *Arch. f. Relig. wiss.*, 1901, IV, p. 160ff., Cumont, *Textes et monuments*, I, p. 178, fig. 11.) Tertullian (*De praescriptione hereticorum* 40) says of Mithras: "imaginem resurrectionis inducit."[7] The Mandaean hero-saviour Saoshyant, the next to come in the series of millenniary saviours or prophets, is fused with Mithras, as is the latter with Idris (Hermes, Mercurius; see Dussaud, "Notes de myth, syrienne," pp. 23ff.[8] In these circumstances, it is not very surprising that Elijah should become "Helyas Artista" in medieval alchemy (e.g., Dorn, "De transmut. met.," *Theatr. chem.*, 1602, I, p. 610: "usque in adventum Heliae Artistae quo tempore nihil tam occultum quod non revelabitur").[9] This passage has its origin in the treatise "De tinctura physicorum" of Paracelsus. (See also Helvetius, *Vitulus aureus*, 1667: Glauber, *De Elia Artista*, 1668, and Kopp, *Die Alchemie*, 1886, I, pp. 250ff.)[10]

[1529] It is unnecessary to continue this long list of *phenomena of assimilation* which follow without interruption, so to speak, from the remotest times to our own day. This proves irrefutably that Elijah is a *living archetype*. In psychology, we call it a *constellated archetype*, that is to say one that is more or less generally active, giving birth to new forms of assimilation. One of these phenomena was the choice of Carmel for the foundation of the first convent in the twelfth century. The mountain had long been a numinous place as the seat of the Canaanite deities Baal and Astarte. (Cf. the duality of Elijah, the transformation into a hetaira.) YHWH supplants them as inhabitant of the sacred place (Eliyah like Khadir a kind of personification of YHWH or Allah. Cf. the temperament and the fire of the prophet!). The numinous inhabitant of Carmel is chosen as the patron of the order. The choice is curious and unprecedented. According to the empirical rule, an archetype becomes active and chooses itself when a certain lack in the conscious sphere calls for a compensation on the part of the unconscious. What is lacking on the conscious side is the immediate relation with God: in so far as Elijah is an angelic being fortified with divine power, having the magic name of Eli-YHWH, delivered from corruptibility, omniscient and omnipresent, he represents the ideal compensation not only for Christians but for Jews and Moslems also. He is the typical θεόςανθρωπος, more human than Christ inasmuch as he is begotten and born in *peccatum originale,* and more universal in that he included even the pre-Yahwist pagan deities like Baal, El-Elyon, Mithras, Mercurius, and the personification of Allah, al-Khadir.

[1530] I have already said that the archetype "gets itself chosen" rather than is deliberately chosen. I prefer this way of putting it because it is almost the rule that one follows unconsciously the attraction and suggestion of the archetype. I think that the legend of Elijah and the unique atmosphere of Mount Carmel exercised an influence from which the founder of the order could no more withdraw himself than could the Druses, the Romans, Jews, Canaanites, or Phoenicians. It was not only the *place* which favoured the choice for the adoption of a compensatory figure but the *time*. The twelfth century and the beginning of the thirteenth were just the period which activated the spiritual movements brought into being by the new aeon which began with the eleventh century.[11] These were the days of Joachim of Flora and the Brethren of the Free Spirit, of Albertus Magnus and Roger Bacon, of the beginning of Latin alchemy and of the natural sciences and also of a feminine religious symbol, the Holy Grail. (For the significance of the year 1000, see my *Aion*. chs. VI and X, 3.)

[1531] To complete the establishment of a living archetype, the historical proofs do not wholly suffice, since one can explain the historical documentation by tradition (whose beginnings, however, always remain unexplained). That the archetype also manifests itself spontaneously outside tradition needs to be added to the evidence. God as collective soul, as spirit of nature, eternally renewed, incorruptible, archetype of the spirit even in the form of the "Trickster," pagan divinity, is encountered in ancient and medieval alchemy having nothing to do with the local tradition of Carmel. The *Deus absconditus* of alchemy has the same compensating function as the figure of Elijah. Lastly—as is little known—the psychology of alchemy has become comprehensible to us thanks to the fact that we observe analogous compensations in pathological and normal individuals in modern times. In calling themselves “atheists” or “agnostics,” people dissatisfied with the Christian tradition are not being merely negative. In many cases it is easy to observe the phenomenon of the “compensating God,” as I have demonstrated in my most recent works.

I hope, dear Fr. Bruno, that I have shown you the way an archetype is established and have answered your question concerning the choice of the archetype.

Yours sincerely, C. G. JUNG

LETTER TO PÈRE LACHAT[1]

Küsnacht, 27 March 1954

Dear Sir,

[1532] It was very kind of you to send me your booklet[2] on the reception and action of the Holy Spirit. I have read it with special interest since the subject of the Holy Spirit seems to me one of current importance. I remember that the former Archbishop of York, Dr. Temple, admitted, in conversation with me, that the Church has not done all that it might to develop the idea of the Holy Spirit. It is not difficult to see why this is so, for τὸ πνεῦμα πνεῖ ὅπου θέλει[3]—a fact which an institution may find very inconvenient! In the course of reading your little book a number of questions and thoughts have occurred to me, which I set out below, since my reactions may perhaps be of some interest to you.

[1533] I quite agree with your view that one pauses before entrusting oneself to the "unforeseeable action" of the Holy Spirit. One feels afraid of it, not, I think, without good reason. Since there is a marked difference between the God of the Old Testament and the God of the New, a definition is desirable. You nowhere explain your idea of God. Which God have you in mind: The New Testament God, or the Old? The latter is a paradox; good and demonlike, just and unjust at the same time, while the God of the New Testament is by definition perfect, good, the Summum Bonum even, without any element of the dark or the demon in him. But if you identify these two Gods, different as they are, the fear and resistance one feels in entrusting oneself unconditionally to the Holy Spirit are easy to understand. The divine action is so unforeseeable that it may well be really disastrous. That being so, the prudence of the serpent counsels us not to approach the Holy Spirit too closely.

[1534] If, on the other hand, it is the New Testament God you have in mind, one can be absolutely certain that the risk is more apparent than real since the end will always be good. In that event the experiment loses its venturesome character; it is not really dangerous. It is then merely foolish not to give oneself up entirely to the action of the Holy Spirit. Rather one should seek him day by day, and one will easily lay hold of him, as Mr. Horton[4] assures us. In the absence of a formal statement on your part, I assume that you identify the two Gods. In that case the Holy Spirit would not be easy to apprehend; it would even be highly dangerous to attract the divine attention by specially pious behaviour (as in the case of Job and some others). In the Old Testament Satan still has the Father's ear, and can influence him even against the righteous. The Old Testament furnishes us with quite a number of instances of this kind, and they warn us to be very careful when we are dealing with the Holy Spirit. The man who is not particularly bold and adventurous will do well to bear these examples in mind and to thank God that the Holy Spirit does not concern himself with us overmuch. One feels much safer under the shadow of the Church, which serves as a fortress to protect us against God and his Spirit. It is very comforting to be assured by the Catholic Church that it "possesses" the Spirit, who assists regularly at its rites. Then one knows that he is well chained up. Protestantism is no less reassuring in that it represents the Spirit to us as something to be sought for, to be easily "drunk," even to be possessed. We get the impression that he is something passive, which cannot budge without us. He has lost his dangerous qualities, his fire, his autonomy, his power. He is represented as an innocuous, passive, and purely beneficent element, so that to be afraid of him would seem just stupid.

[1535] This characterization of the Holy Spirit leaves out of account the terrors of YHWH. It does not tell us what the Holy Spirit is, since it has failed to explain to us clearly what it has done with the *Deus absconditus*. Albert Schweitzer naïvely informs us that he takes the side of the ethical God and avoids the *absconditus*, as if a mortal man had the ability to hide himself when faced with an almighty God or to take the other, less risky side. God can implicate him in unrighteousness whenever he chooses.

[1536] I also fail to find a definition of Christ; one does not know whether he is identical with the Holy Spirit, or different from him. Everyone talks about Christ; but who is this Christ? When talking to a Catholic or

Anglican priest, I am in no doubt. But when I am talking to a pastor of the Reformed Church, it may be that Christ is the Second Person of the Trinity and God in his entirety, or a divine man (the "supreme authority," as Schweitzer has it, which doesn't go too well with the error of the parousia), or one of those great founders of ethical systems like Pythagoras, Confucius, and so on. It is the same with the idea of God. What is Martin Buber talking about when he discloses to us his intimate relations with "God"? YHWH? The olden Trinity, or the modern Trinity, which has become something more like a Quaternity since the Sponsa has been received into the Thalamus?[5] Or the rather misty God of Protestantism? Do you think that everyone who says that he is surrendering himself to Christ has really surrendered himself to Christ? Isn't it more likely that he has surrendered himself to the image of Christ which he has made for himself, or to that of God the Father or the Holy Spirit? Are they all the same Christ—the Christ of the Synoptics, of the *Exercitia Spiritualia*, of a mystic of Mount Athos, of Count Zinzendorf,[6] of the hundred sects, of Caux[7] and Rudolf Steiner, and—last but not least—of St. Paul? Do you really believe that anyone, be he who he may, can bring about the real presence of one of the Sacred Persons by an earnest utterance of their name? I can be certain only that someone has called up a psychic image, but it is impossible for me to confirm the real presence of the Being evoked. It is neither for us nor for others to decide *who* has been invoked by the holy name and to whom one has surrendered oneself. Has it not happened that the invocation of the Holy Spirit has brought the devil on the scene? What are invoked are in the first place images, and that is why images have a special importance. I do not for a moment deny that the deep emotion of a true prayer may reach transcendence, but it is above our heads. There would not even be any transcendence if our images and metaphors were more than anthropomorphism and the words themselves had a magical effect. The Catholic Church protects itself against this insinuation *expressis verbis*, insisting on its teaching that God cannot go back on his own institutions. He is morally obliged to maintain them by his Holy Spirit or his grace. All theological preaching is a mythologem, a series of archetypal images intended to give a more or less exact description of the unimaginable transcendence. It is a paradox, but it is justified. The totality of these archetypes corresponds to what I have called the *collective unconscious*. *We are concerned here with empirical facts, as I have proved*. (Incidentally, you don't seem to be well informed about either the nature of the unconscious or my psychology. The idea that the unconscious is the abyss of all the horrors is a bit out of date. The collective unconscious is neutral; it is only nature, both spiritual and chthonic. To impute to my psychology the idea that the Holy Spirit is "only a projection of the human soul" is false. He is a transcendental fact which presents itself to us under the guise of an archetypal image (e.g. [ ])[8], or are we to believe that he is really "breathed forth" by the Father and the Son?). There is no guarantee that this image corresponds exactly to the transcendental entity.

[1537] The unconscious is ambivalent; it can produce both good and evil effects. So the image of God also has two sides, like YHWH or the God of Clement of Rome with two hands; the right is Christ, the left Satan, and it is with these two hands that he rules the world.[9] Nicholas of Cusa calls God a *complexio oppositorum* (naturally under the apotropaic condition of the *privatio boni!*). YHWH's paradoxical qualities are continued in the New Testament. In these circumstances it becomes very difficult to know what to make of *prayer*. Can we address our prayer to the good God to the exclusion of the demon, as Schweitzer recommends? Have we the power of dissociating God like the countrywoman who said to the child Jesus, when he interrupted her prayer to the Virgin: "Shhh, child, I'm talking to your mother"? Can we really put on one side the God who is dangerous to us? Do we believe that God is so powerless that we can say to him: "Get out, I'm talking to your better half?" Or can we ignore the *absconditus?* Schweitzer invites us to do just this; we're going to have our bathe in the river, and never mind the crocodiles. One can, it seems, brush them aside. Who is there who can produce this "simple faith"?

[1538] Like God, then, the unconscious has two aspects; one good, favourable, beneficent, the other evil, malevolent, disastrous. The unconscious is the immediate source of our religious experiences. This psychic nature of all experience does not mean that the transcendental realities are also psychic; the physicist does not believe that the transcendental reality represented by his psychic model is also psychic. He calls it *matter*, and in the same way the psychologist in no wise attributes a psychic nature to his images or archetypes. He calls them "psychoids"[10] and is convinced that they represent transcendental realities. He even knows of "simple faith" as that *conviction which one cannot avoid*. It is vain to seek for it; it comes when it wills, for it is the gift of the Holy Spirit. There is only one divine spirit—an immediate presence, often terrifying and in no degree subject to our choice. There is no guarantee that it may not just as well be the devil, as happened to St. Ignatius Loyola in his vision of the *serpens oculatus*, interpreted at first as Christ or God and later as the devil.[11] Nicholas of Flüe had his terrifying vision of the *absconditus*, and transformed it later into the kindly Trinity of the parish church of Sachseln.[12]

[1539] Surrender to God is a formidable adventure, and as "simple" as any situation over which man has no control. He who can risk himself wholly to it finds himself directly in the hands of God, and is there confronted with a situation which makes "simple faith" a vital necessity; in other words, the situation becomes so full of risk or overtly dangerous that the deepest instincts are aroused. An experience of this kind is always numinous, for it unites all aspects of totality. All this is wonderfully expressed in Christian religious symbolism: the divine will incarnate in Christ urges towards the fatal issue, the catastrophe followed by the fact or hope of resurrection, while Christian faith insists on the deadly danger of the adventure; but the Churches assure us that God protects us against all danger and especially against the fatality of our character. Instead of taking up our cross, we are told to cast it on Christ. He will take on the burden of our anguish and we can enjoy our "simple faith" at Caux. We take flight into the Christian collectivity where we can forget even the will of God, for in society we lose the feeling of personal responsibility and can swim with the current. One feels safe in the multitude, and the Church does everything to reassure us against the fear of God, as if it did not believe that He could bring about a serious situation. On the other hand psychology is painted as black as possible, because it teaches, in full agreement with the Christian creed, that no man can ascend unless he has first descended. A professor of theology once accused me publicly that “in flagrant contradiction to the words of Christ” I had criticized as *childish* the man who remains an infant retaining his early beliefs. I had to remind him of the fact that Christ never said “remain children” but “become like children.” This is one small example of the way in which Christian experience is falsified; it is prettied up, its sombre aspects are denied, its dangers are hidden. But the action of the Holy Spirit does not meet us in the atmosphere of a normal, bourgeois (or proletarian!), sheltered, regular life, but only in the insecurity outside the human economy, in the infinite spaces where one is alone with the *providentia Dei*. We must never forget that Christ was an innovator and revolutionary, *executed with criminals*. The reformers and great religious geniuses were *heretics*. It is there that you find the footprints of the Holy Spirit, and no one asks for him or receives him *without having to pay a high price*. The price is so high that no one today would dare to suggest that he possesses or is possessed by the Holy Spirit, or he would be too close to the psychiatric clinic. The danger of making oneself ridiculous is too real, not to mention the risk of offending our real god: *respectability*. There one even becomes very strict, and it would not be at all allowable for God and his Spirit to permit themselves to give advice or orders as in the Old Testament. Certainly everyone would lay his irregularities to the account of the unconscious. One would say: God is faithful, he does not forsake us, God does not lie, he will keep his word, and so on. We know it isn’t true, but we go on repeating these lies ad infinitum. It is quite understandable that we should seek to hold the truth at arm’s length, because it seems impossible to give oneself up to a God who doesn’t even respect his own laws when he falls victim to one of his fits of rage or forgets his solemn oath. When I allow myself to mention these well-attested facts the theologians accuse me of blasphemy, unwilling as they are to admit the ambivalence of the divine nature, the demonic character of the God of the Bible and even of the Christian God. Why was that cruel immolation of the Son necessary if the anger of the “deus ultionum” is not hard to appease? One doesn’t notice much of the Father’s goodness and love during the tragic end of his Son.

[1540] True, we ought to abandon ourselves to the divine will as much as we can, but admit that to do so is difficult and dangerous, so dangerous indeed that I would not dare to advise one of my clients to “take” the Holy Spirit or to abandon himself to him until I had first made him realize the risks of such an enterprise.

[1541] Permit me here to make a few comments. On pp. 11f.: The Holy Spirit is to be feared. He is revolutionary *especially* in religious matters (not at all “perhaps even religious,” p. 11 bottom). Ah, yes, one does well to refuse the Holy Spirit, because people would like to palm him off on us without telling us what this sacred fire is which killeth and maketh to live. One may get through a battle without being wounded, but there are some unfortunates who do not know how to avoid either mutilation or death. Perhaps one is among their number. One can hardly take the risk of that without the most convincing necessity. It is quite normal and reasonable to refuse oneself to the Holy Spirit. Has M. Boegner’s[13] life been turned upside down? Has he taken the risk of breaking with convention (e.g., eating with Gentiles when one is an orthodox Jew, or even better with women of doubtful reputation), or been immersed in darkness like Hosea, making himself ridiculous, overturning the traditional order, etc.? It is deeds that are needed, not words.

[1542] p. 13. It is very civil to say that the Holy Spirit is “uncomfortable and sometimes upsetting,” but very characteristic.

[1543] p. 16. It is clear that the Holy Spirit is concerned in the long run with the collectivity (*ecclesia*), but in the first place with the individual, and to create him he isolates him from his environment, just as Christ himself was thought mad by his own family.

[1544] p. 19. The Holy Spirit, “the accredited bearer of the holiness of God.” But who will recognize him as such? Everyone will certainly say that he is drunk or a heretic or mad. To the description “bearer of the holiness” needs to be added the holiness which God himself sometimes sets on one side (Ps. 89).

[1545] p. 21. It is no use for Mr. Horton to believe that receiving the Holy Spirit is quite a simple business. It is so to the degree that we do not realize what is at issue. We are surrendering ourselves to a Spirit with two aspects. That is why we are not particularly ready to “drink” of him, or to “thirst” for him. We hope rather that God is going to pass us by, that we are protected against his injustice and his violence. Granted, the New

Testament speaks otherwise, but when we get to the Apocalypse the style changes remarkably and approximates to that of older times. Christ's kingdom has been provisional; the world is left thereafter for another aeon to Antichrist and to all the horrors that can be envisaged by a pitiless and loveless imagination. This witness in favour of the god with two faces represents the last and tragic chapter of the New Testament which would like to have set up a god exclusively good and made only of love. This Apocalypse—was it a frightful gaffe on the part of those Fathers who drew up the canon? I don't think so. They were still too close to the hard reality of things and of religious traditions to share our mawkish interpretations and prettily falsified opinions.

[1546] p. 23. "Surrender without the least reserve." Would Mr. Horton advise us to cross the Avenue de l'Opéra blindfold? His belief in the good God is so strong that he has forgotten the fear of God. For Mr. Horton God is dangerous no longer. But in that case—what is the Apocalypse all about? He asks nevertheless, "To what interior dynamism is one surrendering oneself, natural or supernatural?" When he says, "I surrender myself wholly to God," how does he know what is "whole"? Our wholeness is an unconscious fact, whose extent we cannot establish. God alone can judge of human wholeness. We can only say humbly: "As wholly as possible."

[1547] There is no guarantee that it is really *God* when we say "god." It is perhaps a word concealing a demon or a void, or it is an act of grace coincident with our prayer.

[1548] This total surrender is disturbing. Nearly twenty years ago I gave a course at the Ecole Polytechnique Suisse for two semesters on the *Exercitia Spiritualia* of St. Ignatius.[14] On that occasion I received a profound impression of this total surrender, in relation to which one never knows whether one is dealing with sanctity or with spiritual pride. One sees too that the god to whom one surrenders oneself is a clear and well-defined prescription given by the director of the Exercises. This is particularly evident in the part called the "colloquium," where there is only one who speaks, and that is the initiand. One asks oneself what God or Christ would say if it were a real dialogue, but no one expects God to reply.

[1549] p. 26. The identity of Christ with the Holy Spirit seems to me to be questionable, since Christ made a very clear distinction between himself and the paraclete, even if the latter's function resembles Christ's. The near-identity of the Holy Spirit with Christ in St. John's Gospel is characteristic of the evangelist's Gnosticism. It seems to me important to insist on the chronological sequence of the Three Persons, for there is an evolution in three stages:

1. The Father. The opposites not yet differentiated; Satan is still numbered among the "sons of God." Christ then is only hinted at.

2. God is incarnated as the "Son of Man." Satan has fallen from heaven. He is the other "son." The opposites are differentiated.

3. The Holy Spirit is One, his prototype is the Ruach Elohim, an emanation, an active principle, which proceeds (as quintessence) *a Patre Filioque*. Inasmuch as he proceeds also from the Son he is different from the Ruach Elohim, who represents the active principle of Yahweh (not incarnate, with only angels in place of a son). The angels are called "sons," they are not begotten and there is no mother of the angels. Christ on the other hand shares in human nature, he is even man by definition. In this case it is evident that the Holy Spirit proceeding from the Son does not arise from the divine nature only, that is, from the second Person, but also from the human nature. Thanks to this fact, human nature is included in the mystery of the Trinity. Man forms part of it.

[1550] This "human nature" is only figuratively human, for it is exempt from original sin. This makes the "human" element definitely doubtful inasmuch as man without exception, save for Christ and his mother, is begotten and born bearing the stamp of the *macula peccati*. That is why Christ and his mother enjoy a nature divine rather than human. For the Protestant there is no reason to think of Mary as a goddess. Thus he can easily admit that on his mother's side Christ was contaminated by original sin; this makes him all the more human, at least so far as the *filioque* of the Protestant confession does not exclude the true man from the "human" nature of Christ. On the other hand it becomes evident that the Holy Spirit necessarily proceeds *from the two natures* of Christ, not only from the God in him, but also from the man in him.

[1551] There were very good reasons why the Catholic Church has carefully purified Christ and his mother from all contamination by the *peccatum originale*. Protestantism was more courageous, even daring or—perhaps?—more oblivious of the consequences, in not denying—*expressis verbis*—the human nature (in part) of Christ and (wholly) of his mother. *Thus the ordinary man became a source of the Holy Spirit*, though certainly not the only one. It is like lightning, which issues not only from the clouds but also from the peaks of the mountains. This fact signifies the continued and progressive divine incarnation. Thus man is received and integrated into the divine drama. He seems destined to play a decisive part in it; that is why he must receive the Holy Spirit. I look upon the receiving of the Holy Spirit as a highly revolutionary fact which cannot take place until the ambivalent nature of the Father is recognized. If God is the *summum bonum*, the incarnation makes no sense, for a good god could never produce such hate and anger that his only son had to be sacrificed to appease it. A Midrash says that the Shofar is still sounded on the Day of Atonement to remind YHWH of his act of injustice towards Abraham (by compelling him to slay Isaac) and to prevent him from repeating it. A conscientious clarification of the idea of God would have consequences as upsetting as they are necessary. They would be indispensable for an interior development of the trinitarian drama and of the role of the Holy Spirit. The Spirit is destined to be incarnate in man or to choose him as a transitory dwelling-place. “Non habet nomen proprium,” says St. Thomas;[15] because he will receive the name of man. That is why he must not be identified with Christ. We cannot receive the Holy Spirit unless we have accepted our own individual life as Christ accepted his. Thus we become the “sons of god” fated to experience the conflict of the divine opposites, represented by the crucifixion.

[1552] Man seems indispensable to the divine drama. We shall understand this role of man’s better if we consider the paradoxical nature of the Father. As the Apocalypse has alluded to it (*evangelium aeternum*) and Joachim of Flora[16] has expressed it, the Son would seem to be the intermediary between the Father and the Holy Spirit. We could repeat what Origen said of the Three Persons, that the Father is the greatest and the Holy Spirit the least. This is true inasmuch as the Father by descending from the cosmic immensity became the least by incarnating himself within the narrow bounds of the human soul (cult of the child-god, Angelus Silesius). Doubtless the presence of the Holy Spirit enlarges human nature by divine attributes. Human nature is the divine vessel and as such the union of the Three. This results in a kind of quaternity which always signifies *totality*, while the triad is rather a process, but never the natural division of the *circle,* the natural symbol of wholeness. The quaternity as union of the Three seems to be aimed at by the *Assumption of Mary*. This dogma adds the feminine element to the masculine Trinity, the terrestrial element (*virgo terra!*) to the spiritual, and thus sinful man to the Godhead. For Mary in her character of *omnium gratiarum mediatrix* intercedes for the sinner before the judge of the world. (She is his "paraclete.") She is φιλανθρωπος like her prefiguration, the Sophia of the Old Testament.[17] Protestant critics have completely overlooked the symbolic aspect of the new dogma and its emotional value, which is a capital fault.

[1553] The "littleness" of the Holy Spirit stems from the fact that God's pneuma dissolves into the form of little flames, remaining none the less intact and whole. His dwelling in a certain number of human individuals and their transformation into υἱῷ τοῦ θεοῦ signifies a very important step forward beyond "Christocentrism." Anyone who takes up the question of the Holy Spirit seriously is faced with the question whether Christ is identical with the Holy Spirit or different from him. With dogma, I prefer the independence of the Holy Spirit. The Holy Spirit is *one*, a *complexio oppositorum,* in contrast to YHWH after the separation of the divine opposites symbolized by God's two sons, Christ and Satan. On the level of the Son there is no answer to the question of good and evil; there is only an incurable separation of the opposites. The annulling of evil by the *privatio boni* (declaring to be μὴ ὄν) is a *petitio principii* of the most flagrant kind and no solution whatever.[18] It seems to me to be the Holy Spirit's task and charge to reconcile and reunite the opposites in the human individual through a special development of the human soul. The soul is paradoxical like the Father; it is black and white, divine and demon-like, in its primitive and natural state. By the discriminative function of its conscious side it separates opposites of every kind, and especially those of the moral order personified in Christ and Devil. Thereby the soul's spiritual development creates an enormous tension, from which man can only suffer. Christ promised him redemption. But in what exactly does this consist? The *imitatio Christi* leads us to Calvary and to the annihilation of the "body," that is, of biological life, and if we take this death as symbolic it is a state of suspension between the opposites, that is to say, an unresolved conflict. That is exactly what Przywara has named the "rift,"[19] the gulf separating good from evil, the latent and apparently incurable dualism of Christianity, the eternity of the devil and of damnation. (Inasmuch as good is real so also is evil.)

[1554] To find the answer to this question we can but trust to our mental powers on the one hand and on the other to the functioning of the unconscious, that spirit which we cannot control. It can only be hoped that it is a "holy" spirit. The cooperation of conscious reasoning with the data of the unconscious is called the "transcendent function" (cf. *Psychological Types*, par. 828).[20] This function progressively unites the opposites. Psychotherapy makes use of it to heal neurotic dissociations, but this function had already served as the basis of Hermetic philosophy for seventeen centuries. Besides this, it is a natural and spontaneous phenomenon, part of the process of individuation. Psychology has no proof that this process does not unfold itself at the instigation of God's will.

[1555] The Holy Spirit will manifest himself in any case in the psychic sphere of man and will be presented as a psychic experience. He thus becomes the object of empirical psychology, which he will need in order to translate his symbolism into the possibilities of this world. Since his intention is the incarnation, that is, the realization of the divine being in human life, he cannot be a light which the darkness comprehendeth not. On the contrary, he needs the support of man and his understanding to comprehend the *mysterium iniquitatis* which began in paradise before man existed. (The serpent owes his existence to God and by no means to man. The idea: *omne bonum a Deo, omne malum ab homine* is an entirely false one.) YHWH is inclined to find the cause of evil in men, but he evidently represents a moral antinomy accompanied by an almost complete lack of reflection. For example, he seems to have forgotten that he created his son Satan and kept him among the other “sons of God” until the coming of Christ—a strange oversight!

[1556] The data of the collective unconscious favour the hypothesis of a paradoxical creator such as YHWH. An entirely good Father seems to have very little probability; such a character is difficult to admit, seeing that Christ himself endeavoured to reform his Father. He didn’t completely succeed, even in his own logia. Our unconscious resembles this paradoxical God. That is why man is faced with a psychological condition which does not let him differentiate himself from the image of God (YHWH). Naturally we can believe that God is different from the image of him that we possess, but it must be admitted on the other side that the Lord himself, while insisting on the Father’s perfect goodness, has given a picture of him which fits in badly with the idea of a perfectly moral being. (A father who tempts his children, who did not prevent the error of the immediate parousia, who is so full of wrath that the blood of his only son is necessary to appease him, who left the crucified one to despair, who proposes to devastate his own creation and slay the millions of mankind to save a very few of them, and who before the end of the world is going to replace his Son’s covenant by another gospel and complement the love by the fear of God.) It is interesting, or rather tragic, that God undergoes a complete relapse in the last book of the New Testament. But in the case of an antinomian being we could expect no other development. The opposites are kept in balance, and so the kingdom of Christ is followed by that of Antichrist. In the circumstances the Holy Spirit, the third form of God, becomes of extreme importance, for it is thanks to him that the man of good will is drawn towards the divine drama and mingled in it, and the Spirit is *one*. In him the opposites are separated no longer.

[1557] Begging you to excuse the somewhat heretical character of my thoughts as well as their imperfect presentation. I remain, dear monsieur, yours sincerely,

C. G. JUNG

NON RESURRECTION[1]

[1558] You are quite right: I have never dealt with all aspects of the Christ-figure for the simple reason that it would have been too much. I am not a theologian and I have had no time to acquire all the knowledge that is wanted in order to attempt the solution of such problems as that of the Resurrection.

[1559] Indubitably resurrection is one of the most—if not the most—important item in the myth or the biography of Christ and in the history of the primitive church.

1. Resurrection as a historical fact in the biography of Jesus

[1560] Three Gospels have a complete report about the postmortal events after the Crucifixion. Mark, however, mentions only the open and empty tomb and the presence of the angel, while the apparition of the visible body of Christ has been reported by a later hand in an obvious addendum. The first report about the resurrected Christ is made by Mary Magdalene, from whom Christ had driven out seven devils. This annotation has a peculiarly cursory character (cf. in particular Mark 11:19),[2] as if somebody had realized that Mark's report was altogether too meagre and that the usual things told about Christ's death ought to be added for the sake of completeness.

[1561] The earliest source about the Resurrection is St. Paul, and he is no eyewitness, but he strongly emphasizes the absolute and vital importance of resurrection as well as the authenticity of the reports. (Cf. I Cor. 15:14ff and 15:5ff.) He mentions Cephas (Peter) as the first witness, then the twelve, then the five hundred, then James, then the apostles, and finally himself. This is interesting, since his experience was quite clearly an understandable vision, while the later reports insist upon the material concreteness of Christ's body (particularly Luke 24:42 and John 20:24ff.). The evangelical testimonies agree with each other only about the emptiness of the tomb, but not at all about the chronology of the eyewitnesses. There the tradition becomes utterly unreliable. If one adds the story about the end of Judas, who must have been a very interesting object to the hatred of the Christians, our doubts of the Resurrection story are intensified: there are two absolutely different versions of the way of his death.

[1562] *The fact of the Resurrection is historically doubtful*. If we extend the *beneficium dubii* to those contradictory statements we could consider the possibility of an individual as well as collective vision (less likely of a materialization).

[1563] The conclusion drawn by the ancient Christians—since Christ has risen from the dead so shall we rise in a new and incorruptible body—is of course just what St. Paul has feared most,[3] viz., invalid and as vain as the expectation of the immediate parousia, which has come to naught.

[1564] As the many shocking miracle-stories in the Gospels show, spiritual reality could not be demonstrated to the uneducated and rather primitive population in any other way but by crude and tangible "miracles" or stories of such kind. Concretism was unavoidable with all its grotesque implications—for example, the believers in Christ were by the grace of God to be equipped with a glorified body at their resurrection, and the unbelievers and unredeemed sinners were too, so that they could be plagued in hell or purgatory for any length of time. An incorruptible body was necessary for the latter performance, otherwise damnation would have come to an end in no time.

[1565] Under those conditions, resurrection as a historical and concrete fact cannot be maintained, whereas the vanishing of the corpse could be a real fact.

2. *Resurrection as a psychological event*

[1566] The facts here are perfectly clear and well documented: The life of the God-man on earth comes to an end with his resurrection and transition to heaven. This is firm belief since the beginning of Christianity. In mythology it belongs to the hero that he conquers death and brings back to life his parents, tribal ancestors, etc. He has a more perfect, richer, and stronger personality than the ordinary mortal.

Although he is also mortal himself, death does not annihilate his existence: he continues living in a somewhat modified form. On a higher level of civilization he approaches the type of the dying and resurrected god, like Osiris, who becomes the greater personality in every individual (like the Johannine Christ), viz., his τέλειος ἄνθρωπος, the complete (or perfect) man, the self.

[1567] The self as an archetype represents a numinous wholeness, which can be expressed only by symbols (e.g., mandala, tree, etc.). As a collective image it reaches beyond the individual in time and space[4] and is therefore not subjected to the corruptibility of *one* body: the realization of the self is nearly always connected with the feeling of timelessness, "eternity," or immortality. (Cf. the personal and superpersonal ātman.) We do not know what an archetype is (i.e., consists of), since the nature of the psyche is inaccessible to us, but we know that archetypes exist and work.

[1568] From this point of view it is no longer difficult to see to what degree the story of the Resurrection represents the projection of an indirect realization of the self that had appeared in the figure of a certain man, Jesus of Nazareth, of whom many rumors were circulating.[5] In those days the old gods had ceased to be significant. Their power had already been replaced by the concrete one of the visible god, the Caesar, whose sacrifices were the only obligatory ones. But this substitution was as unsatisfactory as that of God by the communistic state. It was a frantic and desperate attempt to create—out of no matter how doubtful material—a spiritual monarch, a *pantokrator*, in opposition to the concretized divinity in Rome. (What a joke of the *esprit d'escalier* of history—the substitution for the Caesar of the pontifical office of St. Peter!)

[1569] Their need of a spiritual authority then became so particularly urgent, because there was only one divine individual, the Caesar, while all the others were anonymous and hadn't even private gods listening to their prayers.[6] They took therefore to magic of all kinds. Our actual situation is pretty much the same: we are rapidly becoming the slaves of an anonymous state as the highest authority ruling our lives. Communism has realized this ideal in the most perfect way. Unfortunately our democracy has nothing to offer in the way of different ideals; it also believes in the concrete power of the state. There is no spiritual authority comparable to that of the state anywhere. We are badly in need of a spiritual counterbalance to the ultimately bolshevistic concretism. It is again the case of the "witnesses" against the Caesar.

[1570] The gospel writers were as eager as St. Paul to heap miraculous qualities and spiritual significances upon that almost unknown young rabbi, who after a career lasting perhaps only one year had met with an untimely end. What they made of him we know, but we don't know to what extent this picture has anything to do with the truly historical man, smothered under an avalanche of projections. Whether he was the eternally living Christ and Logos, we don't know. It makes no difference anyhow, since the image of the God-man lives in everybody and has been incarnated (i.e., projected) in the man Jesus, to make itself visible, so that people could realize him as their own interior *homo*, their self.

[1571] Thus they had regained their human dignity: everybody had divine nature. Christ had told them: *Dii estis:* "ye are gods"; and as such they were his brethren, of his nature, and had overcome annihilation either through the power of the Caesar or through physical death. They were "resurrected with Christ."

[1572] Since we are psychic beings and not entirely dependent upon space and time, we can easily understand the central importance of the resurrection idea: we are not completely subjected to the powers of annihilation because our psychic totality reaches beyond the barrier of space and time. Through the progressive integration of the unconscious we have a reasonable chance to make experiences of an archetypal nature providing us with the feeling of continuity before and after our existence. The better we understand the archetype, the more we participate in its life and the more we realize its eternity or timelessness.

[1573] As roundness signifies completeness or perfection, it also expresses rotation (the rolling movement) or progress on an endless circular way, an identity with the sun and the stars (hence the beautiful confession in the "Mithraic Liturgy"; ἐγώ εἰμι σύμπλανος ὑμῖν ἀστήρ ("I am a Star following his way like you"). The realization of the self also means a re-establishment of Man as the microcosm, i.e., man's cosmic relatedness.

Such realizations are frequently accompanied by synchronistic events. (The prophetic experience of vocation belongs to this category.)

[1574] To the primitive Christians as to all primitives, the Resurrection had to be a concrete, materialistic event to be seen by the eyes and touched by the hands, as if the spirit had no existence of its own. Even in modern times people cannot easily grasp the reality of a psychic event, unless it is concrete at the same time. Resurrection as a psychic event is certainly not concrete, it is just a psychic experience. It is funny that the Christians are still so pagan that they understand spiritual existence only as a body and as a physical event. I am afraid our Christian churches cannot maintain this shocking anachronism any longer, if they don't want to get into intolerable contradictions. As a concession to this criticism, certain theologians have explained St. Paul's glorified (subtle) body given back to the dead on the day of judgment as the authentic individual "form," viz., a spiritual idea sufficiently characteristic of the individual that the material body could be skipped. It was the evidence for man's survival after death and the hope to escape eternal damnation that made resurrection in the body the mainstay of Christian faith. We know positively only of the fact that space and time are relative to the psyche.

ON THE DISCOURSES OF THE BUDDHA[1]

[1575] It was neither the history of religion nor the study of philosophy that first drew me to the world of Buddhist thought, but my professional interests as a doctor. My task was the treatment of psychic suffering, and it was this that impelled me to become acquainted with the views and methods of that great teacher of humanity whose principal theme was the "chain of suffering, old age, sickness, and death." For although the healing of the sick naturally lies closest to the doctor's heart, he is bound to recognize that there are many diseases and states of suffering which, not being susceptible of a direct cure, demand from both patient and doctor some kind of attitude to their irremediable nature. Even though it may not amount to actual incurability, in all such cases there are inevitably phases of stagnation and hopelessness which seem unendurable and require treatment just as much as a direct symptom of illness. They call for a kind of moral attitude such as is provided by religious faith or a philosophical belief. In this respect the study of Buddhist literature was of great help to me, since it trains one to observe suffering objectively and to take a universal view of its causes. According to tradition, it was by objectively observing the chain of causes that the Buddha was able to extricate his consciousness from the snares of the ten thousand things, and to rescue his feelings from the entanglements of emotion and illusion. So also in our sphere of culture the suffering and the sick can derive considerable benefit from this prototype of the Buddhist mentality, however strange it may appear.

[1576] The discourses of the Buddha, here presented in K. E. Neumann's new translation, have an importance that should not be underestimated. Quite apart from their profound meaning, their solemn, almost ritual form emits a penetrating radiance which has an exhilarating and exalting effect and cannot fail to work directly upon one's feelings. Against this use of the spiritual treasures of the East it might be—and indeed, often has been—objected from the Christian point of view that the faith of the

West offers consolations that are at least as significant, and that there is no need to invoke the spirit of Buddhism with its markedly rational attitude. Aside from the fact that in most cases the Christian faith of which people speak simply isn’t there, and no one can tell how it might be obtained (except by the special providence of God), it is a truism that anything known becomes so familiar and hackneyed by frequent use that it gradually loses its meaning and hence its effect; whereas anything strange and unknown, and so completely different in its nature, can open doors hitherto locked and new possibilities of understanding. If a Christian insists so much on his faith when it does not even help him to ward off a neurosis, then his faith is vain, and it is better to accept humbly what he needs no matter where he finds it, if only it helps. There is no need for him to deny his religion convictions if he acknowledges his debt to Buddhism, for he is only following the Pauline injunction: “Prove all things; hold fast that which is good” (I Thess. 5:21).

[1577] To this good which should be held fast one must reckon the discourses of the Buddha, which have much to offer even to those who cannot boast of any Christian convictions. They offer Western man ways and means of disciplining his inner psychic life, thus remedying an often regrettable defect in the various brands of Christianity. The teachings of the Buddha can give him a helpful training when either the Christian ritual has lost its meaning or the authority of religious ideas has collapsed, as all too frequently happens in psychogenic disorders.

[1578] People have often accused me of regarding religion as “mental hygiene.” Perhaps one may pardon a doctor his professional humility in not undertaking to prove the truth of metaphysical assertions and in shunning confessions of faith. I am content to emphasize the importance of having a *Weltanschauung* and the therapeutic necessity of adopting some kind of attitude to the problem of psychic suffering. Suffering that is not understood is hard to bear, while on the other hand it is often astounding to see how much a person can endure when he understands the why and the wherefore. A philosophical or religious view of the world enables him to do this, and such views prove to be, at the very least, psychic methods of healing if not of salvation. Even Christ and his disciples did not scorn to heal the sick, thereby demonstrating the therapeutic power of their mission. The doctor has to cope with actual suffering for better or worse, and ultimately has nothing to rely on except the mystery of divine Providence. It is no wonder, then, that he values religious ideas and attitudes, so far as they prove helpful, as therapeutic systems, and singles out the Buddha in particular, the essence of whose teaching is deliverance from suffering through the maximum development of consciousness, as one of the supreme helpers on the road to salvation. From ancient times physicians have sought a panacea, a *medicina catholica*, and their persistent efforts have unconsciously brought them nearer to the central ideas of the religion and philosophy of the East.

[1579] Anyone who is familiar with methods of suggestion under hypnosis knows that plausible suggestions work better than those which run counter to the patient’s own nature. Consequently, whether he liked it or not, the doctor was obliged to develop conceptions which corresponded as closely as possible with the actual psychological conditions. Thus, there grew up a realm of theory which not only drew upon traditional thought but took account of the unconscious products that compensated its inevitable one-sidedness—that is to say, all those psychic factors which Christian philosophy left unsatisfied. Among these were not a few aspects which, unknown to the West, had been developed in Eastern philosophy from very early times.

[1580] So if, as a doctor, I acknowledge the immense help and stimulation I have received from the Buddhist teachings, I am following a line which can be traced back some two thousand years in the history of human thought.

FOREWORD TO FROBOESE-THIELE: “TRÄUME—EINE QUELLE RELIGIÖSER ERFAHRUNG?”[1]

[1581] This book has the merit of being the first to investigate how the unconscious of Protestants behaves when it has to compensate an intensely religious attitude. The author examines this question with the help of case material she has collected in her practical work. She has evidently had the good fortune to come upon some very instructive cases who, moreover, did not object to the publication of their material. Since we owe our knowledge of unconscious processes primarily to dreams, the author is mainly concerned with the dreams of her patients. Even for one familiar with this material, the dreams and symbols reported here are remarkable. As a therapist, she handles the dreams in a very felicitous manner, from the practical side chiefly, so that a reciprocal understanding of the meaning of the dream is gradually built up between her and the patient. This puts the reader in the advantageous position of listening in on a dialogue, so to speak. The method is as instructive as it is satisfying, since it is possible to present in this way several fairly long sequences of dreams. A detailed scientific commentary would take up a disproportionate amount of space without making the dream interpretation any more impressive. If the interpretation is at times uncertain, or disregards various details, this in no way affects the therapeutic intention to bring the meaning of the dream nearer to consciousness. In actual practice, one can often do full justice to a dream if one simply puts its general tendency, its emotional atmosphere, and its approximate meaning in the right light, having first, of course, assured oneself of the spontaneous approval of the dreamer. With intelligent persons, this thoughtful feeling of one’s way into the meaning of the dream can soon be left to the patient himself.

[1582] The author has been entirely successful in bringing out the religious meaning of the dreams and so demonstrating her thesis. A religious attitude does in fact offer a direct challenge to the unconscious, and the more inimical the conscious attitude is to life, the more forceful and drastic will be this unconscious reaction. It serves the purpose, firstly, of compensating the extremism of the conscious attitude and, secondly, of individuation, since it re-establishes the approximate wholeness of the personality.

[1583] The material which Dr. Froboese-Thiele has made available in her book is of considerable importance for doctors and theologians alike, since both of them have here an opportunity to assure themselves that the unconscious possesses a religious aspect against which no cogent arguments can be mustered. One is left with a feeling of shame that so little of the empirical case material which would give the layman an adequate idea of these religious processes has been published. The author deserves our special thanks for having taken the trouble to write up these exacting cases *in extenso*. I hope her book will come into the hands of many thoughtful persons whose minds are not stopped up with needless prejudices, and who would be in a position to find a satisfactory answer to religious questions, or at least to come by those experiences which ought to underlie any authentic religious convictions.

JUNG AND RELIGIOUS BELIEF[1]

1. Questions to Jung and His Answers[2]

QUESTION 1. *You say that religion is psychically healthy and often for the latter part of life essential, but is it not psychically healthy only if the religious person believes that his religion is true?*

Do you think that in your natural wish to keep to the realm of psychology you have tended to underestimate man's search for truth and the ways in which he might reach this as, for example, by inference?

[1584] Nobody is more convinced of the importance of the search for truth than I am. But when I say: something transcendental is true, my critique begins. If I call something true, it does not mean that it is absolutely true. It merely seems to be true to myself and/or to other people. If I were not doubtful in this respect it would mean that I implicitly assume that I am able to state an absolute truth. This is an obvious hybris. When Mr. Erich Fromm[3] criticizes me for having a wrong idea and quotes Judaism, Christianity, and Buddhism he demonstrates how illogical his standpoint is, as are the views of those religions themselves, i.e., their truths contradict each other. Judaism has a morally ambivalent God; Christianity a Trinity and Summum Bonum; Buddhism has no God but has interior gods. Their truth is relative and not an absolute truth—if you put them on the same level, as Mr. Fromm does. I naturally admit, and I even strongly believe, that it is of the highest importance to state a "truth." I should be prepared to make transcendental statements, but on one condition: that I state at the same time the possibility of their being untrue. For instance "God is," i.e., is as I think he is. But as I know that I could not possibly form an adequate idea of an all-embracing eternal being, my idea of him is pitifully incomplete; thus the statement "God is not" (so) is equally true and necessary. To make absolute statements is beyond man's reach, although it is ethically indispensable that he give all the credit to his subjective truth, which means that he admits being bound by his conviction to apply it as a principle of his actions. Any human judgment, no matter how great its subjective conviction, is liable to error, particularly judgments concerning transcendental subjects. Mr. Fromm's philosophy has not transcended yet—I am afraid—the level of the twentieth century; but the power-drive of man and his hybris are so great that he believes in an absolutely valid judgment. No scientifically minded person with a sense of intellectual responsibility can allow himself such arrogance. These are the reasons why I insist upon the criterion of *existence*, both in the realm of science and in the realm of religion, and upon immediate and primordial *experience*. Facts are facts and contain no falsity. It is our judgment that introduces the element of deception. To my mind it is more important that an idea exists than that it is true. This despite the fact that it makes a great deal of difference subjectively whether an idea seems to me to be true or not, though this is a secondary consideration since there is no way of establishing the truth or untruth of a transcendental statement other than by a subjective belief.

QUESTION 2. *Is it possible that you depreciate consciousness through an overvaluation of the unconscious?*

[1585] I have never had any tendency to depreciate consciousness by insisting upon the importance of the unconscious. If such a tendency is attributed to me it is due to a sort of optical illusion. Consciousness is the "known," but the unconscious is very little known and my chief efforts are devoted to the elucidation of our unconscious psyche. The result of this is, naturally, that I talk more about the unconscious than about the conscious. Since everybody believes or, at least, tries to believe in the unequivocal superiority of rational consciousness, I have to emphasize the importance of the unconscious irrational forces, to establish a sort of balance. Thus to superficial readers of my writings it looks as if I were giving the unconscious a supreme significance, disregarding consciousness. As a matter of fact the emphasis lies on consciousness as the *conditio sine qua non* of apperception of unconscious contents, and the supreme arbiter in the chaos of unconscious possibilities. My book about *Types* is a careful study of the empirical structure of consciousness. If we had an inferior consciousness, we should all be crazy. The ego and ego-consciousness are of paramount importance. It would be superfluous to emphasize consciousness if it were not in a peculiar compensatory relationship with the unconscious.

[1586] People like Demant[4] start from the prejudiced idea that the unconscious is something more or less nasty and archaic that one should get rid of. This is not vouched for by experience. The unconscious is neutral, rather like nature. If it is destructive on the one side, it is as constructive on the other side. It is the source of all sorts of evils and also the matrix of all divine experience and—paradoxical as it may sound—it has brought forth and brings forth consciousness. Such a statement does not mean that the source *originates*, i.e., that the water is created just at the spot where you see the source of a river; it comes from deep down in the mountain and runs along its secret ways before it reaches daylight. When I say, “Here is the source,” I only mean the spot where the water becomes visible. The water-simile expresses rather aptly the nature and importance of the unconscious. Where there is no water nothing lives; where there is too much of it everything drowns. It is the task of consciousness to select the right place where you are not too near and not too far from water; but the water is indispensable. An unfavourable opinion about the unconscious does not enable proper Christians, like Demant, to realize that religious experience, so far as the human mind can grasp it, cannot be distinguished from the experience of so-called unconscious phenomena. A metaphysical being does not as a rule speak through the telephone to you; it usually communicates with man through the medium of the soul, in other words, our unconscious, or rather through its transcendental “psychoid” basis.[5] If one depreciates the unconscious one blocks the channels through which the *aqua gratiae* flows, but one certainly does not incapacitate the devil by this method. Creating obstacles is just his métier.

[1587] When St. Paul had the vision of Christ, that vision was a psychic phenomenon—if it was anything. I don’t presume to know what the psyche is; I only know that there is a psychic realm in which and from which such manifestations start. It is the place where the *aqua gratiae* springs forth, but it comes, as I know quite well, from the immeasurable depths of the mountain and I don’t pretend to know about the secret ways and places the water flows through before it reaches the surface.

[1588] As the general manifestations of the unconscious are ambivalent or even ambiguous ("It is a fearful thing to fall into the hands of the living God," Heb. 10:31), decision and discriminating judgment are all-important. We see that particularly clearly in the development of the individuation process, when we have to prevent the patient from either rejecting blindly the data of the unconscious or submitting to them without criticism. (Why has Jacob to fight the angel of the Lord? Because he would be killed if he did not defend his life.) There is no development at all but only a miserable death in a thirsty desert if one thinks one can rule the unconscious by our arbitrary rationalism. That is exactly what the German principle, "Where there is a will, there is a way," tried to do, and you know with what results.

QUESTION 3. *In your "Answer to Job" you state, page 463 (Collected Works, Vol. 11): "I have been asked so often whether I believe in the existence of God or not that I am somewhat concerned lest I be taken for an adherent of 'psychologism' far more commonly than I suspect." You go on to say, "God is an obvious psychic and non-physical fact," but I feel in the end you do not actually answer the question as to whether or not you believe in the existence of God other than as an archetype. Do you?*

This question is important because I should like to answer the kind of objection raised by Glover in his Freud or Jung, *page 163: "Jung's system is fundamentally irreligious. Nobody is to care whether God exists, Jung least of all. All that is necessary is to 'experience' an "attitude' because it 'helps one to live.'"*

[1589] An archetype—so far as we can establish it empirically—is an *image*. An image, as the very term denotes, is a picture of something. An archetypal image is like the portrait of an unknown man in a gallery. His name, his biography, his existence in general are unknown, but we assume nevertheless that the picture portrays a once living subject, a man who was real. We find numberless images of God, but we cannot produce the original. There is no doubt in my mind that there is an original behind our images, but it is inaccessible. We could not even be aware of the original since its translation into psychic terms is necessary in order to make it perceptible at all. How would Kant's *Critique of Pure Reason* look when translated into the psychic imagery of a cockroach? And I assume that the difference between man and the creator of all things is immeasurably greater than between a cockroach and man. Why should we be so immodest as to suppose that we could catch a universal being in the narrow confines of our language? We know that God-images play a great role in psychology, but we cannot prove the physical existence of God. As a responsible scientist I am not going to preach my personal and subjective convictions which I cannot prove. I add nothing to cognition or to a further improvement and extension of consciousness when I confess my personal prejudices. I simply go as far as my mind can reach, but to venture opinions beyond my mental reach would be immoral from the standpoint of my intellectual ethics. If I should say, "I believe in such and such a God," it would be just as futile as when a Negro states his firm belief that the tin-box he found on the shore contains a powerful fetish. If I keep to a statement which I think I can prove, this does not mean that I deny the existence of anything else that might exist beyond it. It is sheer malevolence to accuse me of an atheistic attitude simply because I try to be honest and disciplined. Speaking for myself, the question whether God exists or not is futile. I am sufficiently convinced of the effects man has always attributed to a divine being. If I should express a belief beyond that or should assert the existence of God, it would not only be superfluous and inefficient, it would show that I am not basing my opinion on facts. When people say that they believe in the existence of God, it has never impressed me in the least. Either I know a thing and then I don't need to believe it; or I believe it because I am not sure that I know it. I am well satisfied with the fact that I know experiences which I cannot avoid calling numinous or divine.

QUESTION 4. *Do you ignore the importance of other disciplines for the psyche?*

Goldbrunner in his Individuation, *page 161, says that your treatment of "what God is in Himself" is a question which you regard as beyond the scope of psychology, and adds: "This implies a positivistic, agnostic renunciation of all metaphysics." Do you agree that your treatment* *amounts to that? Would you not agree that such subjects as metaphysics and history have their place in the experience of the psyche?*

[1590] I do not ignore the importance of other disciplines for the psyche. When I was professor at the E.T.H. in Zurich I lectured for a whole year about Tantrism[6] and for another year about the *Spiritual Exercises* of St. Ignatius of Loyola.[7] Moreover, I have written a number of books about the peculiar spiritual discipline of the alchemists.

[1591] What Goldbrunner says is quite correct. I don't know what God is in himself. I don't suffer from megalomania. Psychology to me is an honest science that recognizes its own boundaries, and I am not a philosopher or a theologian who believes in his ability to step beyond the epistemological barrier. Science is made by man, which does not mean that there are not occasionally acts of grace permitting transgression into realms beyond. I don't depreciate or deny such facts, but to me they are beyond the scope of science as pointed out above. I believe firmly in the intrinsic value of the human attempt to gain understanding, but I also recognize that the human mind cannot step beyond itself, although divine grace may and probably does allow at least glimpses into a transcendental order of things. But I am neither able to give a rational account of such divine interventions nor can I prove them. Many of the analytical hours with my patients are filled with discussions of "metaphysical" intrusions, and I am in dire need of historical knowledge to meet all the problems I am asked to deal with. For the patient's mental health it is all-important that he gets some proper understanding of the numina the collective unconscious produces, and that he assigns the proper place to them. It is, however, either a distortion of the truth or lack of information when Goldbrunner calls my attitude "positivistic," which means a one-sided recognition of scientific truth. I know too well how transitory and sometimes even futile our hypotheses are, to assume their validity as durable truths and as trustworthy foundations of a *Weltanschauung* capable of giving man sure guidance in the chaos of this world. On the contrary, I rely very much on the continuous influx of the numina from the unconscious and from whatever lies behind it. Goldbrunner therefore is also wrong to speak of an "agnostic renunciation of all metaphysics." I merely hold that metaphysics cannot be an object of science, which does not mean that numinous experiences do not happen frequently, particularly in the course of an analysis or in the life of a truly religious individual.

QUESTION 5. *If my reading of your views is correct, I should judge that you think evil to be a far more active force than traditional theological views have allowed for. You appear unable to interpret the condition of the world today unless this is so. Am I correct in this? If so, is it really necessary to expect to find the dark side in the Deity? And if you believe that Satan completes the quaternity does this not mean that the Deity would be amoral?*

Victor White in his God and the Unconscious *writes at the end of his footnote on page 76: "On the other hand, we are unable to find any intelligible, let alone desirable, meaning in such fundamental Jungian conceptions as the 'assimilation of the shadow' if they are not to be understood as the supplying of some absent good (e.g., consciousness) to what is essentially valuable and of itself 'good.'"*

[1592] I am indeed convinced that evil is as positive a factor as good. Quite apart from everyday experience it would be extremely illogical to assume that one can state a quality without its opposite. If something is good, then there must needs be something that is evil or bad. The statement that something is good would not be possible if one could not discriminate it from something else. Even if one says that something exists, such a statement is only possible alongside the other statement that something does not exist. Thus when the Church doctrine declares that evil is not (μὴ ὄν) or is a mere shadow, then the good is equally illusory, as its statement would make no sense.

[1593] Suppose one has something 100-per-cent good, and if anything evil comes in it is diminished, say by 5 per cent. Then one possesses 95 per cent of goodness and 5 per cent is just absent. If the original good diminished by 99 per cent, one has 1 per cent good and 99 per cent is gone. If that 1 per cent also disappears, the whole possession is gone and one has nothing at all. To the very last moment one had only good and oneself was good, but on the other side there is simply nothing and nothing has happened. Evil deeds simply do not *exist*. The identification of good with *ousia* is a fallacy, because a man who is thoroughly evil does not disappear at all when he has lost his last good. But even if he has 1 per cent of good, his body and soul and his whole existence are still *thoroughly good;* for, according to the doctrine, evil is simply identical with non-existence. This is such a horrible syllogism that there must be a very strong motive for its construction. The reason is obvious: it is a desperate attempt to save the Christian faith from dualism. According to this theory [of the *privatio boni*] even the devil, the incarnate evil, must be good, because he exists, but inasmuch as he is thoroughly bad, he does not exist. This is a clear attempt to annihilate dualism in flagrant contradiction to the dogma that the devil is eternal and damnation a very real thing. I don't pretend to be able to explain the actual condition of the world, but it is plain to any unprejudiced mind that the forces of evil are dangerously near to a victory over the powers of good. Here Basil the Great would say, "Of course that is so, but all evil comes from man and not from God," forgetting altogether that the serpent in Paradise was not made by man, and that Satan is one of the sons of God, prior to man. If man were positively the origin of all evil, he would possess a power equal or almost equal to that of the good, which is God. But we don't need to inquire into the origin of Satan. We have plenty of evidence in the Old Testament that Yahweh is moral and immoral at the same time, and Rabbinic theology is fully aware of this fact. Yahweh behaves very much like an immoral being, though he is a guardian of law and order. He is unjust and unreliable according to the Old Testament. Even the God of the New Testament is still irascible and vengeful to such a degree that he needs the self-sacrifice of his son to quench his wrath. Christian theology has never denied the identity of the God of the Old Testament with that of the New Testament. Now I ask you: what would you call a judge that is a guardian of the Law and is himself unjust? One would be inclined to call such a man immoral. I would call him both immoral and moral, and I think I express the truth with this formula. Certainly the God of the Old Testament is good and evil. He is the Father or Creator of Satan as well as of Christ. Certainly if God the Father were nothing else than a loving Father, Christ's cruel sacrificial death would be thoroughly superfluous. I would not allow my son to be slaughtered in order to be reconciled to my disobedient children.

[1594] What Victor White writes about the assimilation of the shadow is not to be taken seriously. Being a Catholic priest he is bound hand and foot to the doctrine of his Church and has to defend every syllogism. The Church knows all about the assimilation of the shadow, i.e., how it is to be repressed and what is evil. Being a doctor I am never too certain about my moral judgments. Too often I find that something that is a virtue in one individual is a vice in another, and something that is good for the one is poison for another. On the other hand, pious feeling has invented the term of *felix culpa* and Christ preferred the sinner. Even God does not seem particularly pleased with mere righteousness.

[1595] Nowhere else is it more important to emphasize that we are speaking of our traditional image of God (which is not the same as the original) than in the discussion of the *privatio boni*. We don't produce God by the magic word or by representing his image. The word for us is still a fetish, and we assume that it produces the thing of which it is only an image. What God is in himself nobody knows; at least I don't. Thus it is beyond the reach of man to make valid statements about the divine nature. If we disregard the short-comings of the human mind in assuming a knowledge about God, which we cannot have, we simply get ourselves into most appalling contradictions and in trying to extricate ourselves from them we use awful syllogisms, like the *privatio boni*. Moreover our superstitious belief in the power of the word is a serious obstacle to our thinking. That is the historical reason why quite a number of shocking contradictions have been heaped up, offering facile opportunities to the enemy of religion. I strongly advocate, therefore, a revision of our religious formulas with the aid of psychological insight. It is the great advantage of Protestantism that an intelligent discussion is possible. Protestantism should make use of this freedom. Only a thing that changes and evolves, lives, but static things mean spiritual death.[8]

2. Final Questions and Answers[9]

QUESTION 1. *If Christ, in His Incarnation, concentrated, as you contend, on goodness ("Answer to Job," pp. 414, 429f.) what do you mean by*

"Christ preferred the sinner" and "Even God does not seem particularly pleased with mere righteousness"? Is there not an inconsistency here?

[1596] Of course there is. I am just pointing it out.

QUESTION 2. *You stress the principle of the opposites and the importance of their union. You also write of enantiodromia in relation to the opposites but this (in the sense in which Heraclitus used the term) would never produce a condition of stability which could lead to the union of the opposites. So is there not a contradiction in what you say about the opposites?*

[1597] "Enantiodromia" describes a certain psychological fact, i.e., I use it as a psychological concept. Of course it does not lead to a union of opposites, has—as a matter of fact—nothing to do with it. I see no contradiction anywhere.

QUESTION 3. *If the principle of enantiodromia, a perpetual swinging of the pendulum, is always present would we not have a condition in which there would be no sense of responsibility, but one of amorality and meaninglessness?*

[1598] Naturally life would be quite meaningless if the enantiodromia of psychological states kept on for ever. But such an assumption would be both arbitrary and foolish.

QUESTION 4. *When we come into close contact with pharisaism, theft or murder, involving uncharitableness, ruthless and selfish treatment of others, we know that they are evil and very ugly. In actual life what we call goodness—loyalty, integrity, charitableness—does not appear as one of a pair of opposites but as the kind of behavior we want for ourselves and others. The difficulty is that we cannot judge all the motives involved in any action with certainty. We are unable to see the complete picture and so we should be cautious and charitable in our judgments. But this does not mean that what is good is not good, or what is evil is not evil. Do you not think that what you have to say about the quaternity and enantiodromia ultimately blurs the distinction between good and evil? Is not what is blurred only our capacity always to see the real moral issues clearly?*

[1599] It only means that moral judgment is human, limited, and under no condition metaphysically valid. Within these confines good is good, and evil is evil. One must have the courage to stand up for one's convictions. We cannot imagine a state of wholeness (quaternity) which is good and evil. It is beyond our moral judgment.

QUESTION 5. *Theologians who believe in Satan have maintained that he was created good but that through the use of his free will he became evil. What necessity is there to assume that he is the inevitable principle of evil in the Godhead—the fourth member of the quaternity?*

[1600] Because the Three are the Summum Bonum, and the devil is the principle and personification of evil. In a Catholic quaternity the fourth would be the Mother, 99-per-cent divine. The devil would not count, being μὴ ὄν, an empty shadow owing to the *privatio boni*, in which the Bonum is equal to οὐσία.

QUESTION 6. *You build much on the existence of four functions, thinking, feeling, sensation, and intuition. Is this a final or satisfactory typology? If feeling is included, why not conation?*

[1601] The four functions are a mere model for envisaging the qualities of *consciousness*. Conation is a term applicable to the creative process starting in the unconscious and ending in a conscious result, in other words a dynamic aspect of psychic life.

QUESTION 7. *By different approaches in your later writings you add Satan and the Blessed Virgin Mary to the Trinity, but this would make a quinary. Who compose the quaternity?*

[1602] The quaternity can be a hypothetical structure, depicting a wholeness. It is also not a logical concept, but an empirical fact. The *quinarius* or *quinio* (in the form of 4 + 1, i.e., quincunx) does occur as a symbol of wholeness (in China and occasionally in alchemy) but relatively rarely. Otherwise the *quinio* is not a symbol of wholeness, quite the contrary (e.g., the five-rayed star of the Soviets or of U.S.A.). Rather, it is a chaotic *prima materia*.

QUESTION 8. *Would not the quaternity involve not only a revision of doctrine but of moral issues as well, for it would appear inevitably to mean complete moral relativity and so amorality having its source in the Godhead Itself?*

[1603] Man cannot live without moral judgment. From the fact of the empirical quaternary structure of 3 + 1 (3 = good, 1 = evil) we can conclude that the unconscious characterizes itself as an unequal mixture of good and evil.

[1604] There are also not a few cases where the structure is reversed: 1 + 3 (1 = good, 3 = evil). 3 in this case would form the so-called "lower triad." Since the quaternity as a rule appears as a unity, the opposites annul each other, which simply means that our anthropomorphic judgment is no more applicable, i.e., the divinity is beyond good and evil, or else metaphysical assertion is not valid. In so far as the human mind and its necessities issue from the hands of the Creator, we must assume that moral judgment was provided by the same source.

QUESTION 9. *What exactly are you referring to when you use the word "quaternity" in relation to religion? Are you using "quaternity" purely for images which men form of the Godhead? You sometimes give the impression that you are referring to God-images alone. At other times you write as if you have in mind the Godhead itself. This is especially so when you stress the necessity of including Satan and also the Blessed Virgin Mary in the Godhead. If you do not refer to the Godhead itself, there seems to me to be no explanation of the urgency of your words about recognizing the evil principle in God and your welcome of the promulgation of the Assumption.*

[1605] I use the term "quaternity" for the mandala and similar structures that appear *spontaneously* in dreams and visions, or are "invented" (from *invenire* = to find), to express a totality (like four winds and seasons or four sons, seraphim, evangelists, gospels, fourfold path, etc.). The quaternity is of course an image or picture, which does not mean that there is no original!

[1606] If the opposites were not contained in the image, it would not be an image of totality. But it is meant to be a picture of ineffable wholeness, in other words, its symbol. It has an importance for the theologian only in so far as the latter attributes significance to it. If he assumes that his images or formulations are not contents of his consciousness (which is a *contradictio in adiecto*), he can only state that they are exact replicas of the original. But who could suggest such a thing? In spite of the fact that the Church long ago discouraged the idea of a quaternity, the fact remains that Church symbolism abounds in quaternity allusions. As Three (Trinity) is only one (albeit the main) aspect of the Deity, the remaining fourth principle is wiped out of existence by the *privatio boni* syllogism. But the Catholic Church was aware that the picture without opposites is not complete. It therefore admitted (at least tentatively) the existence of a feminine factor within the precincts of the masculine Trinity (*Assumptio Beatae Virginis*). For good reasons the devil is still excluded, and even annihilated, by the *privatio boni.*

[1607] The admission of the *Beata Virgo* is a daring attempt, in so far as she belongs to *lubricum illud genus*[10] (St. Epiphanius), so suspect to the moralistic propensities of the said Church. However, she has been spiritually "disinfected" by the dogma of *Conceptio immaculata*. I consider the Assumption as a cautious approach to the solution of the problem of opposites, namely, to the integration of the fourth metaphysical figure into the divine totality. The Catholic Church has almost succeeded in creating a *quaternity without shadow*, but the devil is still outside. The Assumption is at least an important step forward in Christian (?) symbolism. This evolution will be completed when the dogma of the Co-Redemptrix is reached. But the main problem will not be solved, although one pair of opposites (♂ and ♀) has been smuggled into the divine wholeness. Thus the Catholic Church (in the person of the Pope) has at least seen fit to take the Marianic movement in the masses, i.e., a *psychological fact*, so seriously that he did not hesitate to give up the time-hallowed principle of apostolic authority.

[1608] Protestanism is free to ignore the spiritual problems raised by our time, but it will remove itself from the battlefield and thereby lose its contact with life.

[1609] Being a natural and spontaneous symbol, the quaternity has everything to do with human psychology, while the trinitarian symbol (though equally spontaneous) has become cold, a remote abstraction. Curiously enough, among my collection of mandalas I have only a small number of trinities and triads. They stem one and all from Germans![11] (Unconscious of their shadows, therefore unaware of collective guilt!)

[1610] I do not know at all to what extent human formulas, whether invented or spontaneous, correspond with the original. I only know that we are profoundly concerned with them, whether people know it or not, just as you can be with an illness of which you are unaware. It makes an enormous practical difference whether your dominant idea of totality is three or four. In the former case all good comes from God, all evil from man. Then man is the devil. In the latter case man has a chance to be saved from devilish possession, in so far as he is not inflated with evil. What happened under National Socialism in Germany? What is happening under Bolshevism? With the quaternity the powers of evil, so much greater than man's, are restored to the divine wholeness, whence they originated, even according to Genesis. The serpent was not created by man.

[1611] The quaternity symbol has as much to do with the Godhead as the Trinity has. As soon as I begin to think at all about the experience of "God," I have to choose from my store of images between [concepts representing him as a] monad, dyad, triad, tetrad or an indistinct multiplicity. In any serious case the choice is limited by the kind of revealed image one has received. Yahweh and Allah are monads, the Christian God a triad (historically), the modern experience presumably a tetrad, the early Persian deity a dyad. In the East you have the dyadic monad Tao and the monadic Anthropos (*purusha*), Buddha, etc.

[1612] In my humble opinion all this has very much to do with psychology. We have nothing to go by but these images. Without images you could not even speak of divine experiences. You would be completely inarticulate. You only could stammer "mana" and even that would be an image. Since it is a matter of an ineffable experience the image is indispensable. I would completely agree if you should say: God approaches man in the form of symbols. But we are far from knowing whether the symbol is correct or not.

[1613] The *privatio boni* cannot be compared to the quaternity, because it is not a revelation. On the contrary, it has all the earmarks of a “doctrine,” a philosophical invention.

[1614] It makes no difference at all whether I say “God” or “God-head.” Both are in themselves far beyond man’s reach. To us they are revealed as psychic images, i.e., symbols.

[1615] I am far from making any statements about God himself. I am talking about images, which it is very important to think and talk about, and to criticize, because so much depends upon the nature of our dominant ideas. It makes all the difference in the world whether I think that the source of evil or good is myself, my neighbour, the devil, or the supreme being.

[1616] Of course I am pleading the cause of the *thinking* man, and, inasmuch as most people do not think, of a small minority. Yet it has its place in creation and presumably it makes sense. Its contribution to the development of consciousness is considerable and since Nature has bestowed the highest premium of success on the *conscious* being, consciousness must be more precious to Nature than unconsciousness. Therefore I think that I am not too far astray in trying to understand the symbol of the Deity. My opinion is that such an attempt—whether successful or not—could be of great interest to theology which is built on the same primordial images, whether one likes it or not. At all events you will find it increasingly difficult to convince the educated layman that theology has nothing to do with psychology, when the latter acknowledges its indebtedness to the theological approach.

[1617] My discussion with theology starts from the fact that the naturally revealed central symbols, such as the quaternity, are not in harmony with trinitarian symbols. While the former includes the darkness in the divine totality, the Christian symbol excludes it. The Yahwistic symbol of the star of David is a *complexio oppositorum:* ▽, fire △ and water ✡, a mandala built on three, an unconscious acknowledgment of the Trinity but including the shadow. Properly so, because Satan is still among the *benê Elohim* [sons of God], though Christ saw him falling out of heaven [Luke 10:18]. This vision points to the Gnostic abscission of the shadow, mentioned by Irenaeus.[12] As I have said, it makes a great and vital difference to man whether or not he considers himself as the source of evil, while maintaining that all good stems from God. Whether he knows it or not, this fills him with satanic pride and hybris on the one side and with an abysmal feeling of inferiority on the other. But when he ascribes the immense power of the opposites to the Deity, he falls into his modest place as a small image of the Deity, not of Yahweh, in whom the opposites are unconscious, but of a quaternity consisting of the main opposites: male and female, good and evil, and reflected in human consciousness as confirmed by psychological experience and by the historical evidence. Or have I invented the idea of Tao, the living spiritual symbol of ancient China? Or the four sons of Horus in ancient Egypt? Or the alchemical quaternity that lived for almost a thousand years? Or the Mahayana mandala which is still alive?

QUESTION 10. *One of your objections to the* privatio boni *doctrine is that it minimizes evil, but does not your view of the quaternity, which includes both good and evil, minimize evil much more surely and assume its existence for ever?*

[1618] The quaternity symbol relativizes good and evil, but it does not minimize them in the least.

QUESTION 11. *You argue in "Answer to Job"* (*pp. 399, 430) that, because of his virgin birth, Christ was not truly man and so could not be a full incarnation in terms of human nature. Do you believe that Christ was born of a virgin? If not, the argument in "Answer to Job" falls to pieces. If you believe in the Virgin Birth, would it not be logical to accept the whole emphasis of the Christian Creeds, for they would not appear to be more difficult to believe in than the Virgin Birth?*

[1619] The dogma of the Virgin Birth does not abolish the fact that "God" in the form of the Holy Ghost is Christ's father. If Yahweh is his father, then it is a matter of an *a priori* union of opposites. If the Summum Bonum is his father, then the powers of darkness are missing and the term "good" has lost its meaning and Christ has not become man, because man is afflicted with darkness.

QUESTION 12. *Christ, so the Gospel narratives assert, was born in a manger because there was no room for Him in the inn at Bethlehem; His early life included the Slaughter of the Innocents and His family lived for a time exiled in Egypt; He faced temptation in the wilderness; His ministry was carried on under such hard conditions that He "had not where to lay His head" (Matt. 8:20). He met and ministered to numerous sufferers; sinners received His sympathy and understanding; He endured an agony of suffering in the Garden of Gethsemane and this was followed by His trials, and finally the cruellest of deaths by crucifixion. On what grounds then can you argue that Christ was an incarnation of the light side of God and that He did not enter fully into the dark aspects of existence? ("Answer to Job," pp. 398f., 414, 430.) On the contrary, traditionally He has often been thought of as "a man of sorrows, and acquainted with grief."*

[1620] All that has nothing to do with the dark side of man. Christ is on the contrary the innocent and blameless victim without the *macula peccati*, therefore not really a human being who has to live without the benefit of the Virgin Birth and is crucified in a thousand forms.

QUESTION 13. *What do you mean when in "Answer to Job" you refer to Antichrist and his reign, and state that this was astrologically foretold?*

[1621] It is potentially foretold by the aeon of the Fishes ♓ then beginning, and in fact by the Apocalypse. Cf. my argument in *Aion*, ch. VI.; also Rev. 20:7: "And when the thousand years are expired, Satan shall be loosed out of his prison."

QUESTION 14. *What do you mean by "divine unconsciousness" in "Answer to Job" (footnote on page 383)? Is God more limited than man?*

[1622] This is just the trouble. From Job it is quite obvious that Yahweh behaves like a man with inferior consciousness and an absolute lack of moral self-reflection. In this respect God-image is more limited than man. Therefore God must incarnate.

QUESTION 15. *One of Job's greatest problems was: Can I believe in a just God? Individuation, "the Christification of many," the solution given in "Answer to Job" [p. 470], does not do justice to Job's question. Did not*

Job want meaning, a good God and not simply individuation? He was concerned with metaphysical and theological issues, and the modern Job is too, and just as man cannot live by bread alone, so is he unlikly to feel that he can live by individuation alone which, at its most successful, would appear to be little more than a preparatory process enabling him to face these issues more objectively.

[1623] Job wanted justice. He saw that he could not obtain it. Yahweh cannot be argued with. He is unreflecting power. What else is left to Job but to shut his mouth? He does not dream of individuation, but he knows what kind of God he is dealing with. It is certainly not Job drawing further conclusions but God. He sees that incarnation is unavoidable because man's insight is a step ahead of him. He must "empty himself of his Godhead and assume the shape of the δοῦλος[13] i.e., man is his lowest form of existence, in order to obtain the jewel which man possesses in his self-reflection. Why is Yahweh, the omnipotent creator, so keen to have his "slave," body and soul, even to the point of admitted jealousy?

[1624] Why do you say "by individuation alone"? *Individuation is the life in God*, as mandala psychology clearly shows. Have you not read my later books? You can see it in every one of them. The symbols of the self coincide with those of the Deity. The self is not the ego, it symbolizes the totality of man and he is obviously not whole without God. That seems to be what is meant by incarnation and incidentally by individuation.

3. Answers to Questions from the Rev. David Cox:[14]

I

This question concerned Jung's statement in Two Essays on Analytical Psychology (*par.* 327) *that Western culture has no name or concept for the "union of opposites by the middle path" which could be compared to the concept of Tao. It was suggested that the Christian doctrine of justification by faith is such a concept.*

[1625] Not being a theologian I cannot see a connection between the doctrine of justification and Tao. Tao is the cooperation of opposites, bright-dark, dry-humid, hot-cold, south-north, dragon-tiger, etc., and has nothing to do with moral opposites or with a reconciliation between the Summum Bonum and the devil. Christian doctrine—so far as I know—does not recognize dualism as the constitution of Tao, but Chinese philosophy does.

[1626] It is certainly true that natural man always tries to increase what seems "good" to him and to abolish "evil." He depends upon his consciousness, which, however, may be crossed by "conscience" or by some unconscious intention. This factor can occasionally be stronger than consciousness, so that it cannot be fought. We are very much concerned in psychotherapy with such cases.

[1627] The "Will of God" often contradicts conscious principles however good they may seem. Penitence or remorse follows the deviation from the superior will. The result is—if not a chronic conflict—a *coniunctio oppositorum* in the form of the symbol (*symbolum* = the two halves of a broken coin), the expression of totality.

[1628] I did not know that you understand Christ as the new centre of the individual. Since this centre of the individual appears empirically as a union of opposites (usually a quaternity), Christ must be beyond moral conflict, thus representing ultimate decision. This conception coincides absolutely with my view of the self (= Tao, *nirdvandva*). But since the self includes my consciousness as well as my unconscious, my ego is an integral part of it. Is this also your view of Christ? If this should be so, I could completely agree with you. Life then becomes a dangerous adventure, because I surrender to a power beyond the opposites, to a superior or divine factor, without argument. His supreme decision may be what I call good or what I call bad, as it is unlimited. What is the difference between my behaviour and that of an animal fulfilling the will of God unreservedly? The only difference I can see is that I am conscious of, and reflect on, what I am doing. "If thou knowest what thou art doing, thou art blessed."[15] You have acted.

[1629] (*Unjust steward.*) This is Gnostic morality but not that of the decalogue. The true servant of God runs risks of no mean order. *Entendu!* Thus, at God's command, Hosea marries a whore. It is not beyond the bounds of possibility that such orders could be issued even in modern times. Who is ready to obey? And what about the fact that anything coming from the unconscious is expressed in a peculiar language (words, thoughts, feelings, impulses) that might be misinterpreted? These questions are not meant as arguments against the validity of your view. They merely illustrate the enormity of the risk. I ventilate them only to make sure we really believe in a Christ beyond good and evil. I am afraid of unreflecting optimism and of secret loopholes, as for instance, “Oh, you can trust in the end that everything will be all right.” *Id est:* “God is good” (and not beyond good and evil). Why has God created consciousness and reason and doubt, if complete surrender and obedience to his will is the *ultima ratio?* He was obviously not content with animals only. He wants reflecting beings who are at the same time capable of surrendering themselves to the primordial creative darkness of his will, unafraid of the consequences.

[1630] I cannot help seeing that there is much evidence in primitive Christianity for your conception of Christ, but none in the later development of the Church. Nevertheless there are the seemingly unshakable scriptural testimonies to the essential goodness of God and Christ and there is—to my knowledge—no positive statement in favour of a beyond-good-and-evil conception, not even an implied one. This seems to me to be a wholly modern and new interpretation of a revolutionary kind, at least in view of the Summum Bonum, as you add the Malum and transcend both. In this I completely agree with you. I only want to make sure that we understand each other when we reach the conclusion that man’s true relation to God must include both love and fear to make it complete. If both are true, we can be sure that our relation to him is adequate. The one relativizes the other: in fear we may hope, in love we may distrust. Both conditions appeal to our consciousness, reflection, and reason. Both our gifts come into their own. But is this not a relativization of complete surrender? Or at least an acceptance after an internal struggle? Or a fight against God that can be won only if he himself is his advocate against himself, as Job understood it? And is this not a tearing asunder of God’s original unity by man’s stubborness? A disruption sought by God himself, or by the self itself? As I know from my professional experience, the self does indeed seek such issues because it seeks *consciousness*, which cannot exist without discrimination (differentiation, separation, opposition, contradiction, discussion). The self is empirically in a condition we call unconscious in our three-dimensional world. What it is in its transcendental condition, we do not know. So far as it becomes an object of cognition, it undergoes a process of discrimination and so does everything emanating from it. The discrimination is intellectual, emotional, ethical, etc. That means: the self is subject to our free decision thus far. But as it transcends our cognition, we are its objects or slaves or children or sheep that cannot but obey the shepherd. Are we to emphasize consciousness and freedom of judgment or lay more stress on obedience? In the former case can we fulfil the divine will to consciousness, and in the latter the primordial instinct of obedience? Thus we represent the intrinsic Yea and Nay of the *opus divinum* of *creatio continua*. We ourselves are in a certain respect "beyond good and evil." This is very dangerous indeed (cf. Nietzsche), but no argument against the truth. Yet our inadequacy, dullness, inertia, stupidity, etc. are equally true. Both are aspects of one and the same being.

[1631] Accordingly the alchemists thought of their opus as a continuation and perfection of creation, whereas the modern psychological attempt confronts the opposites and submits to the tension of the conflict: "Expectans naturae operationem, quae lentissima est, aequo animo,"[16] to quote an old master. We know that a *tertium quid* develops out of an opposition, partly aided by our conscious effort, partly by the co-operation of the unconscious effort, partly by the co-operation of the unconscious (the alchemists add: *Deo concedente*). The result of this opus is the *symbol*, in the last resort the self. The alchemists understood it to be as much physical as spiritual, being the *filius macrocosmi*, a parallel to Christ, the υἱος τοῦ ἀνθρώπου. The Gnostics understood the serpent in paradise to be the λόγος, and in the same way the alchemists believed that their *filius philosophorum* was the chthonic *serpens mercurialis* transformed (taking the serpent on the σταυρός [cross] as an *allegoria ad Christum spectans*).[17] Their naïveté shows a hesitation (which I feel too) to identify the self with Christ. Their symbol is the *lapis*. It is incorruptible, *semel factus* (from the *increatum*, the primordial chaos), everlasting, our tool and master at the same time ("artifex non est magister lapidis, sed potius eius minister"),[18] the redeemer of creation in general, of minerals, plants, animals, and of man's physical imperfection. Hence its synonyms: panacea, *alexipharmacum, medicina catholica,* etc. (and hellebore, because it heals insanity).

[1632] Of course if you understand Christ by definition as a *complexio oppositorum,* the equation is solved. But you are confronted with a terrific historical counter-position. As it concerns a point of supreme importance, I wanted to clarify the problem beyond all doubt. This may explain and excuse my long-winded argument.

II

In "Answer to Job" Jung claims that Jesus "incarnates only the light" side of God. This may represent the way in which Jesus is thought of by the majority of Western men and women today, but is it not false to the New Testament and to Christian thought over the centuries?

[1633] You must consider that I am an alienist and practical psychologist, who has to take things as they *are* understood, not as they *could* or *should* be understood. Thus the Gnostics thought that Christ had cut off his shadow, and I have never heard that he embodies evil as Yahweh explicitly does. Catholic as well as Protestant teaching insists that Christ is without sin. As a scientist I am chiefly concerned with what is generally believed, although I can't help being impressed by the fact that the ecclesiastical doctrines do not do justice to certain facts in the New Testament. I have however to consider the *consensus omnium* that Christ is without the *macula peccati*. If I should say that Christ contains some evil I am sure to have the Churches against me. As a psychologist I cannot deal with the theological conception of truth. My field is people's common beliefs.

[1634] Since I am not chiefly concerned with theology but rather with the layman's picture of theological concepts (a fact you must constantly bear in mind), I am liable to make many apparent contradictions (like the medieval mind acquainted with funny stories about Jesus, as you rightly point out). The Gospels do indeed give many hints pointing to the dark side, but this has not affected the picture of the *lumen de lumine*, which is the general view. I am thinking—as a psychologist—about all sorts of erroneous notions which do exist in spite of higher criticism and accurate exegesis and all the achievements of theological research. My object is the general condition of the Christian mind, and not theology, where I am wholly incompetent. Because the *lumen de lumine* idea is paramount in the layman's mind, I dare to point to certain scriptural evidence (accessible to the layman) showing another picture of Christ. I am certain that your conception of Christ would have a hard time getting through certain thick skulls. It is the same with the idea of evil contained in God. I am concerned with dogmas, prejudices, illusions, and errors and every kind of doubt in the layman's mind, and I try to get a certain order into that chaos by the means accessible to a layman, i.e., to myself as a representative of the humble "ignoramus."

III

This question deals with the relationship between faith and projection. Has Jung, in his writing, treated faith as being connected with an outward form of religion?

[1635] This I do not properly understand. Of course "faith" is a relationship to projected contents. But I cannot see how that "corresponds for all practical purposes to a withdrawal of the projection." Faith on the contrary—as it seems to me—maintains the conviction that the projection is a reality. For instance, I project saintly qualities on to somebody. My faith maintains and enhances this projection and creates a worshipful attitude on my part. But it is quite possible that the bearer of the projection is nothing of the kind, perhaps he is even an unpleasant hypocrite. Or I may project, i.e., hypostatize, a religious conviction of a certain kind which I maintain with faith and fervour. Where is the "withdrawal of the projection"?

[1636] In case of doubt you had better refer to *Symbols of Transformation*. Once I was at the beginning of things, at the time when I separated from Freud in 1912. I found myself in great inner difficulties, as I had no notion of the collective unconscious or of archetypes. My education was based chiefly on science, with a modest amount of the humanities. It was a time of *Sturm und Drang*. The so-called *Psychology of the*

Unconscious[19] was an intuitive leap into the dark and contains no end of inadequate formulations and unfinished thoughts.

[1637] I make a general distinction between "religion" and a "creed" for the sake of the layman, since it is chiefly he who reads my books and not the academic scholar. He (the scholar) is not interested in the layman's mind. As a rule he nurses resentments against psychology. I must repeat again: I am a psychologist and thus people's minds interest me in the first place, although I am keen to learn the truth the specialist produces. The layman identifies religion with a creed, that is, with the "things done in the church." Thus Islam, Judaism, Buddhism, etc. are simply religions like Christianity. That there is a genuine inner life, a communion with transcendental powers, a possibility of religious *experience* is mere hearsay. Nor are the churches over-sympathetic to the view that the alpha and omega of religion is the subjective individual experience, but put community in the first place, without paying attention to the fact that the more people there are the less individuality there is. To be alone with God is highly suspect, and, mind you, it is, because the will of God can be terrible and can isolate you from your family and your friends and, if you are courageous or foolish enough, you may end up in the lunatic asylum. And yet how can there be religion without the experience of the divine will? Things are comparatively easy as long as God wants nothing but the fulfilment of his laws, but what if he wants you to break them, as he may do equally well? Poor Hosea could believe in the symbolic nature of his awkward marriage, but what about the equally poor little doctor who has to swear his soul away to save a human life? He cannot even begin to point out what an affliction his act of lying is, although in his solitude with God he may feel justified. But in case of discovery he has to face the ignominious consequences of his deed and nobody will believe him to be a witness for the divine will. To be God's voice is not a social function anymore. *Si parva licet componere magnis*—what did I get for my serious struggle over *Job*, which I had postponed for as long as possible? I am regarded as blasphemous, contemptible, a fiend, whose name is mud. It fell to my lot to collect the victims of the Summum Bonum and use my own poor means to help them. But I could not say that a church of any denomination has encouraged my endeavours. You are one of the *very few* who admit the *complexio oppositorum* in the Deity. (Cusanus does not seem to have really known what he was talking about, nor anybody else in those days, otherwise he would have been roasted long ago.) That is the reason why I don't identify religion with a creed. I can have a real communion only with those who have the same or similar religious experience, but not with the believers in the Word, who have never even taken the trouble to understand its implications and expose themselves to the divine will unreservedly. They use the Word to protect themselves against the will of God. Nothing shields you better against the solitude and forlornness of the divine experience than community. It is the best and safest substitute for individual responsibility.

[1638] The self or Christ is present in everybody *a priori*, but as a rule in an *unconscious condition* to begin with. But it is a definite *experience* of later life, when this fact becomes *conscious*. It is not really understood by teaching or suggestion. It is only real when it *happens*, and it can happen only when you withdraw your projections from an *outward* historical or metaphysical Christ and thus *wake up* Christ within. This does not mean that the unconscious self is inactive, only that we do not understand it. The self (or Christ) cannot become conscious and real without the withdrawal of external projections. An act of *introjection* is needed, i.e., the realization that the self lives in you and not in an external figure separated and different from yourself. The self has always been, and will be, your innermost centre and periphery, your *scintilla* and *punctum solis*. It is even biologically the archetype of order and—dynamically—the source of life.

IV

Here the question is concerned with Jung's objections to the view that God is the Summum Bonum and sin is a privatio boni.

[1639] Well, I have noticed that it seems to be a major difficulty for the theological mind to accept the fact that (1) "good" and "evil" are man-made judgments. Somebody's "good" may be bad or evil for another *et vice versa*. (2) One cannot speak of "good" if one does not equally speak of "evil," any more than there can be an "above" without a "below," or "day" without "night." (3) The *privatio boni* appears to me a syllogism. If "good" and οὐσία are one without an equally valid counterpart, then "good" is also a μὴ ὄν because the term "good" has lost its meaning; it is just "being" and evil is just "not-being" and the term means "nothing." Of course you are free to call "nothing" evil, but nothing is just nothing and cannot bear another name, making it into "something." Something non-existing has no name and no quality. The *privatio boni* suggests that evil is μὴ ὄν, not-being or nothing. It is not even a shadow. There remains only the ὄν, but it is not good, since there is no "bad." Thus the epithet "good" is redundant. You can call God the Summum, but not the Bonum, since there is nothing else different from "being," from the Summum qua being! Although the *privatio boni* is not the invention of the Church Fathers, the syllogism was most welcome to them on account of the Manichaean danger of dualism. Yet without dualism there is no cognition at all, because discrimination is impossible.

[1640] I have never [as you state] understood from my study of the Fathers that God is the highest good *with reference to man*, no matter what he is in himself. This is certainly new to me. Obviously my critique of the Summum Bonum does not apply in this case. The Bonum then would be an anthropomorphic judgment, "God is good for me," leaving it an open question whether he is the same for other people. If one assumes him to be a *complexio oppositorum*, i.e., beyond good and evil, it is possible that he may appear equally well as the source of evil which you believe to be ultimately good for man. I am convinced, as I have seen it too often to doubt it, that an apparent evil is really no evil at all if you accept and obediently live it as far as possible, but I am equally convinced that an apparent good is in reality not always good at all but wholly destructive. If this were not the case, then everything would be ultimately good, i.e., good in its essence, and evil would not really exist, as it would be a merely transitory appearance. In other words: the term "good" has lost its meaning, and the only safe basis of cognition is our world of experience, in which the power of evil is very real and not at all a mere appearance. One can and does cherish an optimistic hope that ultimately, in spite of grave doubts, "all will be well." As I am not making a metaphysical judgment, I cannot help remarking that at least in our empirical world the opposites are inexorably at work and that, without them, this world would not exist. We cannot even conceive of a thing that is not a form of energy, and energy is inevitably based upon opposites.

[1641] I must however pay attention to the psychological fact that, so far as we can make out, *individuation* is a natural phenomenon, and in a way an inescapable goal, which we have reason to call *good for us*, because it liberates us from the otherwise insoluble conflict of opposites (at least to a noticeable degree). It is not invented by man, but Nature herself produces its archetypal image. Thus the credo "in the end all will be well" is not without its psychic foundation. But it is more than questionable whether this phenomenon is of any importance to the world in general, or only to the individual who has reached a more complete state of consciousness, to the "redeemed" man in accordance with our Christian tenet of eternal damnation. "Many are called, but few are chosen" is an authentic logion and not characteristic of Gnosticism alone.

V

Jung has been given the title "Gnostic" which he has rejected. This term has probably been used about him [and his system] because he appears to believe that salvation is for the few and that the many cannot and ought not to attempt individuation. Is it possible that he is a "Gnostic" in this sense?

[1642] The designation of my "system" as "Gnostic" is an invention of my theological critics. Moreover I have no "system." I am not a philosopher, merely an empiricist. The Gnostics have the merit of having raised the problem of πόθεν τὸ κακόν; [whence evil?]. Valentinus as well as Basilides are in my view great theologians, who tried to cope with the problems raised by the inevitable influx of the collective unconscious, a fact clearly portrayed by the "gnostic" gospel of St. John and by St. Paul, not to mention the Book of Revelation, and even by Christ himself (unjust steward and Codex Bezae to Luke 6:4). In the style of their time they hypostatized their ideas as metaphysical entities. Psychology does not hypostatize, but considers such ideas as psychological statements about, or models of, essential unconscious factors inaccessible to immediate experience. This is about as far as scientific understanding can go. In our days there are plenty of people who are unable to believe a statement they cannot understand, and they appreciate the help psychology can give them by showing them that human behaviour is deeply influenced by numinous archetypes. That gives them some understanding of why and how the religious factor plays an important role. It also gives them ways and means of recognizing the operation of religious ideas in their own psyche.

[1643] I must confess that I myself could find access to religion only through the psychological understanding of inner experiences, whereas traditional religious interpretations left me high and dry. It was only psychology that helped me to overcome the fatal impressions of my youth that everything untrue, even immoral, in our ordinary empirical world *must* be believed to be the eternal truth in religion. Above all, the killing of a human victim to placate the senseless wrath of a God who had created imperfect beings unable to fulfil his expectations poisoned my whole religion. Nobody knew an answer. “With God all things are possible.” Just so! As the perpetrator of incredible things he is himself incredible, and yet I was supposed to believe what every fibre of my body refused to admit! There are a great many questions which I could elucidate only by psychological understanding. I loved the Gnostics in spite of everything, because they recognized the necessity of some further *raisonnement*, entirely absent in the Christian cosmos. They were at least human and therefore understandable. But I have no γνῶσις τοῦ θεοῦ. I know the reality of religious experience and of psychological models which permit a limited understanding. I have Gnosis so far as I have immediate experience, and my models are greatly helped by the *représentations collectives* of all religions. But I cannot see why one creed should possess the unique and perfect truth. Each creed claims this prerogative, hence the general disagreement! This is not very helpful. Something must be wrong. I think it is the immodesty of the claim to god-almightiness of the believers, which compensates their inner doubt. Instead of basing themselves upon immediate experience they believe in words for want of something better. The *sacrificium intellectus* is a sweet drug for man’s all-embracing spiritual laziness and inertia.

[1644] I owe you quite a number of apologies for the fact that my layman's mental attitude must be excruciatingly irritating to your point of view. But you know, as a psychologist I am not concerned with theology directly, but rather with the incompetent general public and its erroneous and faulty convictions, which are however just as real to it as their competent views are to the theologians. I am continually asked "theological" questions by my patients, and when I say that I am only a doctor and they should ask the theologian, then the regular answer is, "Oh, yes, we have done so," or "we do not ask a priest because we get an answer we already know, which explains nothing."

[1645] Well this is the reason why I have to try for better or worse to help my patients to some kind of understanding at least. It gives them a certain satisfaction as it has done to me, although it is admittedly inadequate. But to them it sounds as if somebody were speaking their language and understanding their questions which they take very seriously indeed. Once, for instance, it was a very important question to me to discover how far modern Protestantism considers that the God of the Old Testament is identical with the God of the New Testament. I asked two university professors. They did not answer my letter. The third (also a professor) said he didn't know. The fourth said, "Oh, that is quite easy. Yahweh is a somewhat more archaic conception contrasted with the more differentiated view of the New Testament." I said to him, "That is exactly the kind of psychologism you accuse me of." My question must have been singularly inadequate or foolish. But I do not know why. I am speaking for the layman's psychology. The layman is a reality and his questions do exist. My "Answer to Job" voices the questions of thousands, but the theologians don't answer, contenting themselves with dark allusions to my layman's ignorance of Hebrew, higher criticism, Old Testament exegesis, etc., but there is not a single answer. A Jesuit professor of theology asked me rather indignantly how I could suggest that the Incarnation has remained incomplete. I said, "The human being is born under the *macula peccati*. Neither Christ nor his mother suffers from original sin. They are therefore not human, but superhuman, a sort of God." What did he answer? Nothing.

[1646] Why is that so? My layman's reasoning is certainly imperfect, and my theological knowledge regrettably meagre, but not as bad as all that, at least I hope not. But I do know something about the psychology of man now and in the past, and as a psychologist I raise the questions I have been asked a hundred times by my patients and other laymen. Theology would certainly not suffer by paying attention. I know you are too busy to do it. I am all the more anxious to prevent avoidable mistakes and I shall feel deeply obliged to you if you take the trouble of showing me where I am wrong.

[1647] Gnosis is characterized by the hypostatizing of psychological apperceptions, i.e., by the integration of archetypal contents beyond the revealed "truth" of the Gospels. Hippolytus still considered classical Greek philosophy along with Gnostic philosophies as perfectly possible views. Christian Gnosis to him was merely the best and superior to all of them. The people who call me a Gnostic cannot understand that I am a psychologist, describing modes of psychic behaviour precisely like a biologist studying the instinctual activities of insects. He does not *believe* in the tenets of the bee's philosophy. When I show the parallels between dreams and Gnostic fantasies I *believe* in neither. They are just facts one does not need to believe or to hypostatize. An alienist is not necessarily crazy because he describes and analyses the delusions of lunatics, nor is a scholar studying the *Tripitaka* necessarily a Buddhist.

4. Reply to a Letter from the Rev. David Cox[20]

[1648] The crux of this question is: 'Within your own personality." "Christ" can be an external reality (historical and metaphysical) or an archetypal image or idea in the collective unconscious pointing to an unknown background. I would understand the former mainly as a projection, but not the latter, because it is immediately evident. It is not projected upon anything, therefore there is no projection. Only, "faith" in Christ is different from faith in anyone else, since in this case, "Christ" being immediately evident, the word "faith," including or alluding to the possibility of doubt, seems too feeble a word to characterize that powerful presence from which there is no escape. A general can say to his soldiers, "You must have faith in me," because one might doubt him.

But you cannot say to a man lying wounded on the battlefield, “You ought to *believe* that this a real battle,” or “Be sure that you are up against the enemy.” It is just too obvious. Even the historical Jesus began to speak of “faith” because he saw that his disciples had no immediate evidence. Instead they had to believe, while he himself being identical with God had no need to “have faith in God.”

[1649] As one habitually identifies the “psyche” with what one knows of it, it is assumed that one can call certain (supposed or believed) metaphysical entities non-psychic. Being a responsible scientist I am unable to pass such a judgment, for all I know of regular religious phenomena seems to indicate that they are psychic events. Moreover I do not know the full reach of the psyche, because there is the limitless extent of the unconscious. “Christ” is definitely an archetypal image (I don’t add “only”) and that is all I actually know of him. As such he belongs to the (collective) foundations of the psyche. I identify him therefore with what I call the self. The self rules the whole of the psyche. I think our opinions do not differ essentially. You seem to have trouble only with the theological (and self-inflicted) devaluation of the psyche, which you apparently believe to be ultimately definable.

[1650] If my identification of Christ with the archetype of the self is valid, he is, or ought to be, a *complexio oppositorum*. Historically this is not so. Therefore I was profoundly surprised by your statement that Christ contains the opposites. Between my contention and historical Christianity there stretches that deep abyss of Christian dualism—Christ and the Devil, good and evil, God and Creation.

[1651] “Beyond good and evil” simply means: we pass no moral judgment. But in fact nothing is changed. The same is true when we state that whatever God is or does is *good*. Since God does everything (even man created by him is his instrument) everything is good, and the term “good” has lost its meaning. “Good” is a relative term. There is no good without bad.

[1652] I am afraid that even revealed truth has to evolve. Everything living changes. We should not be satisfied with unchangeable traditions. The great battle that began with the dawn of consciousness has not reached its climax with any particular interpretation, apostolic, Catholic, Protestant, or otherwise. Even the highly conservative Catholic Church has overstepped its ancient rule of apostolic authenticity with the *Assumptio Beatae Virginis*. According to what I hear from Catholic theologians, the next step would be the Coredemptrix. This obvious recognition of the female element is a very important step foward. It means psychologically the recognition of the unconscious, since the representative of the collective unconscious is the *anima*, the archetype of all divine mothers (at least in the masculine psyche).

[1653] The equivalent on the Protestant side would be a confrontation with the unconscious as the counterpart or consort of the masculine Logos. The hitherto valid symbol of the supreme spiritual structure was Trinity + Satan, the so-called 3 + 1 structure, corresponding to three conscious functions versus the one unconscious, so-called inferior function; or 1 + 3 if the conscious side is understood as one versus the co-called inferior or chthonic triad, mythologically characterized as three mother figures.[21] I suppose that the negative evaluation of the unconscious has something to do with the fact that it has been hitherto represented by Satan, while in reality it is the female aspect of man’s psyche and thus not wholly evil in spite of the old saying: *Vir a Deo creatus, mulier a simia Dei.*

[1654] It seems to me of paramount importance that Protestantism should integrate psychological experience, as for instance Jacob Boehme did. With him God does not only contain love, but, on the other side and in the same measure, the fire of wrath, in which Lucifer himself dwells. Christ is a revelation of his love, but he can manifest his wrath in an Old Testament way just as well, i.e., in the form of evil. Inasmuch as out of evil good may come, and out of good evil, we do not know whether creation is ultimately good or a regrettable mistake and God’s suffering. It is an ineffable mystery. At any rate we are not doing justice either to nature in general or to our own human nature when we deny the immensity of evil and suffering and turn our eyes from the cruel aspect of creation. Evil should be recognized and one should not attribute the existence of evil to man’s sinfulness. Yahweh is not offended by being feared.

[1655] It is quite understandable why it was an ὐὰγγελον [evangel, “good tidings”] to learn of the *bonitas Dei* and of his son. It was known to the ancients that the *cognito sui-ipsius* [self-knowledge][22] was a prerequisite for this, not only in the Graeco-Roman world but also in the Far East. It is to the individual aptitude that the man Jesus owes his apotheosis: he became the symbol of the self under the aspect of the infinite goodness, which was certainly the symbol most needed in ancient civilization (as it is still needed today).

[1656] It can be considered a fact that the dogmatic figure of Christ is the result of a condensation process from various sources. One of the main origins is the age-old god-man of Egypt: Osiris-Horus and his four sons. It was a remodeling of the unconscious archetype hitherto projected upon a divine non-human being. By embodying itself in a historical man it came nearer to consciousness, but in keeping with the mental capacity of the time it remained as if suspended between God and man, between the need for good and the fear of evil. Any doubt about the absolute *bonitas Dei* would have led to an immediate regression to the former pagan state, i.e., to the amorality of the metaphysical principle.

[1657] Since then two thousand years have passed. In this time we have learned that good and evil are categories of our moral judgment, therefore relative to man. Thus the way was opened for a new model of the self. Moral judgment is a necessity of the human mind. The Christ (ὁ Χριστός) is the Christian model that expresses the self, as the Ἄνθρωπος is the corresponding Egypto-Judaic formula. Moral qualification is withdrawn from the deity. The Catholic Church has almost succeeded in adding femininity to the masculine Trinity. Protestantism is confronted with the psychological problem of the unconscious.

[1658] It is, as far as I can see, a peculiar process extending over at least four thousand years of mental evolution. It can be contemplated in a “euhemeristic” way as a development of man’s understanding of the supreme powers beyond his control. [The process consists of the following stages:] (1) Gods. (2) A supreme Deity ruling the gods and demons. (3) God shares our human fate, is betrayed, killed or dies, and is resurrected again. There is a feminine counterpart dramatically involved in God’s fate. (4) God becomes man in the flesh and thus historical. He is identified with the abstract idea of the Summum Bonum and loses the feminine counterpart. The female deity is degraded to an ancillary position (Church). Consciousness begins to prevail against the unconscious. This is an enormously important step forward in the emancipation of consciousness and in the liberation of thought from its involvement in things. Thus the foundation of science is laid, but on the other hand, that of atheism and materialism. Both are inevitable consequences of the basic split between spirit and matter in Christian philosophy, which proclaimed the redemption of the spirit from the body and its fetters. (5) The whole metaphysical world is understood as a psychic structure projected into the sphere of the unknown.

[1659] The danger of this viewpoint is exaggerated scepticism and rationalism, since the original "supreme powers" are reduced to mere representations over which one assumes one has complete control. This leads to a complete negation of the supreme powers (scientific materialism).

[1660] The other way of looking at it is from the standpoint of the archetype. The original chaos of multiple gods evolves into a sort of monarchy, and the archetype of the self slowly asserts its central position as the archetype of order in chaos. One God rules supreme but apart from man. It begins to show a tendency to relate itself to consciousness through a process of penetration: the humanizing effect of a feminine intercession, expressed for instance by the Isis intrigue. In the Christian myth the Deity, the self, penetrates consciousness almost completely, without any visible loss of power and prestige. But in time it becomes obvious that the Incarnation has caused a loss among the supreme powers: the indispensable dark side has been left behind or stripped off, and the feminine aspect is missing. Thus a further act of incarnation becomes necessary. Through atheism, materialism, and agnosticism, the powerful yet one-sided aspect of the Summum Bonum is weakened, so that it cannot keep out the dark side, and incidentally the feminine factor, any more. "Antichrist" and "Devil" gain the ascendancy: God asserts his power through the revelation of his darkness and destructiveness. Man is merely instrumental in carrying out the divine plan. Obviously he does not want his own destruction but is forced to it by his own inventions. He is entirely unfree in his actions because he does not yet understand that he is a mere instrument of a destructive superior will. From this paradox he could learn that—*nolens volens*—he serves a supreme power, and that supreme powers exist in spite of his denial. As God lives in everybody in the form of the *scintilla* of the self, man could see his "daemonic," i.e., ambivalent, nature in himself and thus he could understand how he is penetrated by God or how God incarnates in man.

[1661] Through his further incarnation God becomes a fearful task for man, who must now find ways and means to unite the divine opposites in himself. He is summoned and can no longer leave his sorrows to somebody else, not even to Christ, because it was Christ that has left him the almost impossible task of his cross. Christ has shown how everybody will be crucified upon his destiny, i.e., upon his self, as he was. He did not carry his cross and suffer crucifixion so that we could escape. The bill of the Christian era is presented to us: we are living in a world rent in two from top to bottom; we are confronted with the H-bomb and we have to face our own shadows. Obviously God does not want us to remain little children looking out for a parent who will do their job for them. We are cornered by the supreme power of the incarnating Will. God really wants to become man, even if he rends him asunder. This is so no matter what we say. One cannot talk the H-bomb or Communism out of the world. We are in the soup that is going to be cooked for us, whether we claim to have invented it or not. Christ said to his disciples "Ye are gods." This word becomes painfully true. If God incarnates in the empirical man, man is confronted with the divine problem. Being and remaining man he has to find an answer. It is the question of the opposites, raised at the moment when God was declared to be good only. Where then is his dark side? Christ is the model for the human answers and his symbol is the *cross*, the union of the opposites. This will be the fate of man, and this he must understand if he is to survive at all. We are threatened with universal genocide if we cannot work out the way of salvation by a symbolic death.

[1662] In order to accomplish his task, man is inspired by the Holy Ghost in such a way that he is apt to identify him with his own mind. He even runs the grave risk of believing he has a Messianic mission, and forces tyrannous doctrines upon his fellow-beings. He would do better to dis-identify his mind from the small voice within, from dreams and fantasies through which the divine spirit manifests itself. One should listen to the inner voice attentively, intelligently and critically (*Probate spiritus!*), because the voice one hears is the *influxus divinus* consisting, as the *Acts of John* aptly state, of “right” and “left” streams, i.e., of opposites.[23] They have to be clearly separated so that their positive and negative aspects become visible. Only thus can we take up a middle position and discover a middle way. That is the task left to man, and that is the reason why man is so important to God that he decided to become a man himself.

[1663] I must apologize for the length of this exposition. Please do not think that I am stating a truth. I am merely trying to present a hypothesis which might explain the bewildering conclusions resulting from the clash of traditional symbols and psychological experiences. I thought it best to put my cards on the table, so that you get a clear picture of my ideas.

[1664] Although all this sounds as if it were a sort of theological speculation, it is in reality modern man’s perplexity expressed in symbolic terms. It is the problem I so often had to deal with in treating the neuroses of intelligent patients. It can be expressed in a more scientific, psychological language; for instance, instead of using the term God you say “unconscious,” instead of Christ “self,” instead of incarnation “integration of the unconscious,” instead of salvation or redemption “individuation,” instead of crucifixion or sacrifice on the Cross “realization of the four functions or of “wholeness.” I think it is no disadvantage to religious tradition if we can see how far it coincides with psychological experience. On the contrary it seems to me a most welcome aid in understanding religious traditions.

[1665] A myth remains a myth even if certain people believe it to be the literal revelation of an eternal truth, but it becomes moribund if the living truth it contains ceases to be an object of belief. It is therefore necessary to renew its life from time to time through a *new interpretation*. This means re-adapting it to the changing spirit of the times. What the Church calls “prefigurations” refer to the original state of the myth, while the Christian doctrine represents a new interpretation and re-adaptation to a Hellenized world. A most interesting attempt at re-interpretation began in the eleventh century,[24] leading up to the schism in the sixteenth century. The Renaissance was no more a rejuvenation of antiquity than

Protestantism was a return to the primitive Christianity: it was a new interpretation necessitated by the devitalization of the Catholic Church.

[1666] Today Christianity is devitalized by its remoteness from the spirit of the times. It stands in need of a new union with, or relation to, the atomic age, which is a unique novelty in history. The myth needs to be retold in a new spiritual language, for the new wine can no more be poured into the old bottles than it could in the Hellenistic age. Even conservative Jewry had to produce an entirely new version of the myth in its Cabalistic Gnosis. It is my practical experience that psychological understanding immediately revivifies the essential Christian ideas and fills them with the breath of life. This is because our worldly light, i.e., scientific knowledge and understanding, coincides with the symbolic statement of the myth, whereas previously we were unable to bridge the gulf between knowing and believing.

[1667] Coming back to your letter (pp. 2–3, 25 September) I must say that I could accept your definition of the Summum Bonum, "Whatever God is, that is good," if it did not interfere with or twist our sense of good. In dealing with the moral nature of an act of God, we have either to suspend our moral judgment and blindly follow the dictates of this superior will, or we have to judge in a human fashion and call white white and black black. In spite of the fact that we sometimes obey the superior will blindly and almost heroically, I do not think that this is the usual thing, nor is it commendable on the whole to act blindly, because we are surely expected to act with conscious moral reflection. It is too dangerously easy to avoid responsibility by deluding ourselves that our will is the will of God. We can be forcibly overcome by the latter, but if we are not we must use our judgment, and then we are faced with the inexorable fact that humanly speaking some acts of God are good and some bad, so much so that the assumption of a Summum Bonum becomes almost an act of hubris.

[1668] If God can be understood as the perfect *complexio oppositorum*, so can Christ. I can agree with your view about Christ completely, only it is not the traditional but a very modern conception which is on the way to the desired new interpretation. I also agree with your understanding of Tao and its contrast to Christ, who is indeed the paradigm of the reconciliation of the divine opposites in man brought about in the process of individuation. Thus Christ stands for the treasure and the supreme "good." (In German "good" = *gut*, but the noun *Gut* also means "property" and "treasure.")

[1669] When theology makes metaphysical assertions the conscience of the scientist cannot back it up. Since Christ never meant more to me than what I could understand of him, and since this understanding coincides with my empirical knowledge of the self, I have to admit that I mean the self in dealing with the idea of Christ. As a matter of fact I have no other access to Christ but the self, and since I do not know anything beyond the self I cling to his archetype. I say, "Here is the living and perceptible archetype which has been projected upon the man Jesus or has historically manifested itself in him." If this collective archetype had not been associated with Jesus he would have remained a nameless Zaddik. I actually prefer the term "self" because I am talking to Hindus as well as Christians, and I do not want to divide but to unite.

[1670] Since I am putting my cards on the table, I must confess that I cannot detach a certain feeling of dishonesty from any metaphysical assertion—one may speculate but not assert. One cannot reach beyond oneself, and if somebody assures you he can reach beyond himself and his natural limitations, he overreaches himself and becomes immodest and untrue.

[1671] This may be a *deformation professionelle*, the prejudice of a scientific conscience. Science is an honest-to-God attempt to get at the truth and its rule is never to assert more than one can prove within reasonable and defensible limits. This is my attitude in approaching the problem of religious experience.

[1672] I am unable to envisage anything beyond the self, since it is—by definition—a borderline concept designating the unknown totality of man: there are no known limits to the unconscious. There is no reason whatsoever why you should or should not call the beyond-self Christ or Buddha or Purusha or Tao or Khidr or Tifereth. All these terms are recognizable formulations of what I call the "self." Moreover I dislike the insistence upon a special name, since my human brethren are as good and as valid as I am. Why should their name-giving be less valid than mine?

[1673] It is not easy for a layman to get the desired theological information, because even the Church is not at one with herself in this respect. *Who* represents authentic Christianity? Thus the layman whether he likes it or not has to quote Protestant or Catholic statements *pêle-mêle* as Christian views because they are backed up by some authority. In my case I believe I have been careful in quoting my sources.

[1674] You as a theologian are naturally interested in the best possible view or explanation, while the psychologist is interested in all sorts of opinions because he wants to acquire some understanding of mental phenomenology and cares little for even the best possible metaphysical assertion, which is beyond human reach anyhow. The various creeds are just so many phenomena to him, and he has no means of deciding about the truth or the ultimate validity of any metaphysical statement. I cannot select the "best" or the "ultimate" opinions because I do not know which kind of opinion to choose from which Church. Also I do not care particularly where such opinions come from, and it is quite beyond my capacity to find out whether they are erroneous or not. I would be wrong only if I attributed, for instance, the idea of the *conceptio immaculata* to Protestantism or the *sola fide* standpoint to Catholicism. The many misunderstandings attributed to me come into this category. In either case it is plain to see that someone has been careless in his assumptions. But if I attribute Ritschl's christological views to Protestantism, it is no error in spite of the fact that the Church of England does not subscribe to the opinions of Mr. Ritschl or of Mr. Barth.[24a] I hope I have not inadvertently been guilty of some misquotation.

[1675] I can illustrate the problem by a typical instance. My little essay on Eastern Meditation[25] deals with the popular tract *Amitāyur Dhyāna Sūtra*, which is a relatively late and not very valuable Mahāyāna text. A critic objected to my choice: he could not see why I should take such an inconspicuous tract instead of a genuinely Buddhist and classical Pāli text in order to present Buddhist thought. He entirely overlooked the fact that I had no intention whatever of expounding classical Buddhism, but that my aim was to analyse the psychology of this particular text. Why should I not deal with Jacob Boehme or Angelus Silesius as Christian writers, even though they are not classical representatives either of Catholicism or of Protestantism?

[1676] A similar misunderstanding appears in your view that I am not doing justice to the *ideal* of community. Whenever possible I avoid *ideals* and much prefer *realities*. I have never found a community which would allow "full expression to the individual within it." Suppose the individual is going to speak the truth regardless of the feelings of everybody else: he would not only be the most abominable enfant terrible but might equally well cause a major catastrophe. Edifying examples of this can be observed at the meetings of Buchman's so-called Oxford Group Movement. At the expense of truth the individual has to "behave," i.e., suppress his reaction merely for the sake of Christian charity. What if I should get up after a sermon about ideals and ask the parson how much he himself is able to live up to his admonitions? In my own case the mere fact that I am seriously interested in psychology has created a peculiar hostility or fear in certain circles. What has happened to those people in the Church, that is in a Christian community, who ventured to have a new idea? No community can escape the laws of mass psychology. I am critical of the community in the same way as I suspect the individual who builds his castles in Spain while anxiously avoiding the expression of his own convictions. I am shy of ideals which one preaches and never lives up to, simply because one cannot. I want to know rather what we *can* live. I want to build up a possible human life which carries through God's experiment and does not invent an ideal scheme knowing that it will *never* be fulfilled.

Later Letter[26]

[1677] I am much obliged to you for telling me exactly what you think and for criticizing my blunt ways of thinking and writing (also of talking, I am afraid). It seems, however, to be the style of natural scientists: we simply state our proposition, assuming that nobody will think it to be more than a disputable hypothesis. We are so imbued with doubts concerning our assumptions that scepticism is taken for granted. We are therefore apt to omit the conventional *captatio benevolentiae lectoris* with its "With hesitation I submit …," "I consider it a daring hypothesis …," etc. We even forget the preamble: "This is the way I look at it.…"

[1678] The case of the Jesuit[27] was that he put the direct question to me: "How on earth can you suggest that Christ was not human?" The discussion was naturally on the *dogmatic* level, as there is no other basis on which this question can be answered. It is not a question of *truth*, because the problem itself is far beyond human judgment. My "Answer to Job" is merely a reconstruction of the psychology discernible in this and other Old Testament texts for the interested layman. He knows very little of Higher Criticism, which is historical and philological in the main, and it is but little concerned with the layman's reactions to the paradoxes and moral horrors of the Old Testament. He knows his Bible and hears the sermons of his parson or priest. As a Catholic he has had a dogmatic education.

[1679] When talking of "Job" you must always remember that I am dealing with the psychology of an archetypal and anthropomorphic image of God and not with a metaphysical entity. As far as we can see, the archetype is a psychic structure with a life of its own to a certain extent.

[1680] God in the Old Testament is a guardian of law and morality, yet is himself unjust. He is a moral paradox, unreflecting in an ethical sense. We can perceive God in an infinite variety of images, yet all of them are anthropomorphic, otherwise they would not get into our heads. The divine paradox is the source of unending suffering to man. Job cannot avoid seeing it and thus he sees more than God himself. This explains why the God-image has to come down "into the flesh." The paradox, expressed of course with many hesitations in the particularities of the myth and in the Catholic dogma, is clearly discernible in the fact that the "Suffering Righteous man" is, historically speaking, an erroneous conception, not identical with the suffering God, because he is Jesus Christ, worshipped as a separate God he is a mere prefiguration, painfully included in a triunity and not an ordinary man who is forced to accept the suffering of intolerable opposites he has not invented. They were preordained. He is the victim, because he is capable of three-dimensional consciousness and ethical decision. (This is a bit condensed. Unlike Yahweh, man has self-reflection.)

[1681] I don’t know what Job is supposed to have seen. But it seems possible that he unconsciously anticipated the historical future, namely the evolution of the God-image. God had to become man. Man’s suffering does not derive from his sins but from the maker of his imperfections, the paradoxical God. The righteous man is the instrument into which God enters in order to attain self-reflection and thus consciousness and rebirth as a divine child trusted to the care of adult man.

[1682] Now this is not the statement of a truth, but the psychological reading of a mythological text—a model constructed for the purpose of establishing the psychological linking together of its contents. My aim is to show what the results are when you apply modern psychology to such a text. Higher Criticism and Hebrew philology are obviously superfluous, because it is simply a question of the text which the layman has under his eyes. The Christian religion has not been shaped by Higher Criticism.

[1683] The trouble I have with my academic reader is that he cannot see a psychic structure as a relatively autonomous entity, because he is under the illusion that he is dealing with a concept. But in reality it is a living thing. The archetype? all have a life of their own which follows a biological pattern. A Church that has evolved a masculine Trinity will follow the old pattern: 3 + 1, where 1 is a female and, if 3 = good, 1 as a woman will mediate between good and evil, the latter being the devil and the shadow of the Trinity. The woman will inevitably be the Mother-Sister of the Son-God, with whom she will be united *in thalamo*, i.e., in the ἱερος γάμος, *quod est demonstratum* by the second Encyclical concerning the Assumption.”[28]

[1684] A passionate discourse between the man Job and God will logically lead to a mutual rapprochement: God will be humanized, man will be “divinized.” Thus Job will be followed by the idea of the Incarnation of God and the redemption and apotheosis of man. This development, however, is seriously impeded by the fact that the “woman,” as always, inevitably brings in the problem of the shadow. Therefore *mulier taceat in ecclesia*. The arch-sin the Catholic Church is ever after is sexuality, and the ideal *par excellence* virginity, which puts a definite stop to life. But if life should insist on going on, the shadow steps in and sin becomes a serious problem, because the shadow cannot be left to eternal damnation any more. Consequently, at the end of the first millennium of the Christian aeon, as predicted in the Apocalypse, the world was suspected of being created by the devil.[29] The impressive and still living myth of the Holy Grail came to life with its two significant figures of Parsifal and Merlin. At the same time we observe an extraordinary development of alchemical philosophy with its central figure of the *filius macrocosmi*, a chthonic equivalent of Christ.

[1685] This was followed by the great and seemingly incurable schism of the Christian Church, and last but not least by the still greater and more formidable schism of the world towards the end of the second millennium.

[1686] A psychological reading of the dominant archetypal images reveals a continuous series of psychological transformations, depicting the autonomous life of archetypes behind the scenes of consciousness. This hypothesis has been worked out to clarify and make comprehensible our religious history. The treatment of psychological troubles and the inability of my patients to understand theological interpretations and terminology have given me my motive. The necessities of psychotherapy have proved to me the immense importance of a religious attitude, which cannot be achieved without a thorough understanding of religious tradition, just as an individual's troubles cannot be understood and cured without a basic knowledge of their biographical antecedents. I have applied to the God-image what I have learned from the reconstruction of so many human lives through a knowledge of their unconscious. All this is empirical and may have nothing to do with theology, if theology says so. But if theology should come to the conclusion that its tenets have something to do with the empirical human psyche, I establish a claim. I think that in those circumstances my opinion should be given a hearing. It cannot be argued on the level of metaphysical assertions. It can be criticized only on its own psychological level, regardless of whether it is a psychologically satisfactory interpretation of the facts or not. The "facts" are the documented historical manifestations of the archetype, however "erroneous" they may be.

[1687] I have stated my point of view bluntly (for which I must ask your forgiveness!) in order to give you a fair chance to see it as clearly as possible. The end of your letter, where you deal with Christ, leaves me with a doubt. It looks to me as if you were trying to explain the empirical man Jesus, while I am envisaging the archetype of the Anthropos and its very general interpretation as a collective phenomenon and not as the best possible interpretation of an individual and historical person. Christianity as a whole is less concerned with the historical man Jesus and his somewhat doubtful biography than with the mythological Anthropos or God-Son figure. It would be rather hazardous to attempt to analyse the historical Jesus as a human person. "Christ" appears from a much safer (because mythological) background, which invites psychological elucidation. Moreover it is not the Jewish rabbi and reformer Jesus, but the archetypal Christ who touches upon the archetype of the Redeemer in everybody and carries conviction.

[1688] My approach is certainly not theological and cannot be treated as a theologoumenon. It is essentially a psychological attempt based upon the archetypal, amoral God-image, which is not a concept but rather an irrational and phenomenal experience, an *Urbild*. But in so far as theologians are also concerned with the adult human psyche (perhaps not as much as medical psychology). I am convinced that it would be of advantage to them to become acquainted with the psychological aspects of the Christian religion. I will not conceal the fact that theological thinking is very difficult for me, from which I conclude that psychological thinking must be an equally laborious undertaking for the theologian. This may explain why I inundate you with such a long letter.

[1689] When I see how China (and soon India) will lose her old culture under the impact of materialistic rationalism. I grow afraid that the Christian West will succumb to the same malady, simply because the old symbolic language is no longer understood and people cannot see any more where and how it applies. In Catholic countries anyone leaving the Church becomes frankly atheistic. In Protestant countries a small number become sectarians, and the others avoid the churches for their cruelly boring and empty sermons. Not a few begin to believe in the State—not even knowing that they themselves are the State. The recent broadcasts of the B.B.C.[30] give a good picture of the educated layman’s mind with regard to religion. What an understanding! All due to the lack of a psychological standpoint, or so it seems to me.

[1690] I am sorry that I am apparently a *petra scandali*. I do not mean to offend. Please accept my apologies for my bluntness. I am sincerely grateful to you for giving me your attention.

Faithfully yours, C. G. JUNG

XIII

ALCHEMICAL STUDIES

(related to Volumes 12, 13, and 14 of the Collected Works)

FOREWORD TO A CATALOGUE ON ALCHEMY[1]

[1691] Alchemy is the forerunner or even the ancestor of chemistry, and is therefore of historical interest to the student of chemistry, in so far as it can be proved to contain recognizable descriptions of chemical substances, reactions, and technical procedures. How much may be gained in this respect from alchemical literature is shown by the comprehensive work of E. O. von Lippmann, *Entstehung und Ausbreitung der Alchemie* (Berlin, 1919). The peculiar character of this literature lies, however, in the fact that there exists a comparatively large number of treatises from which, apart from the most superficial allusions, absolutely nothing of a chemical nature can be extracted. It was therefore supposed—and many of the alchemists themselves wanted us to believe—that their mysterious sign-language was nothing but a skilful way of disguising the chemical procedures which lay behind it. The adept would see through the veil of hieroglyphics and recognize the secret chemical process. Unfortunately, alchemists of repute destroyed this legend by their admission that they were unable to read the riddle of the Sphinx, complaining that the old authors, like Geber and Raymundus Lullius, wrote too obscurely. And indeed, a careful study of such treatises, which perhaps form the majority, will reveal nothing of a chemical nature but something which is purely symbolic, i.e., *psychological*. Alchemical language is not so much *semeiotic* as *symbolic:* it does not disguise a known content but suggests an unknown one, or rather, this unknown content *suggests itself*. This content can only be psychological. If one analyses these symbolic forms of speech, one comes to the conclusion that archetypal contents of the collective unconscious are being projected. Consequently, alchemy acquires a new and interesting aspect as a *projected psychology of the collective unconscious*, and thus ranks in importance with mythology and folklore. Its symbolism has the closest connections with dream symbolism on the one hand, and the symbolism of religion on the other.

FAUST AND ALCHEMY[1]

[1692] The drama of *Faust* has its primary sources in alchemy; these are on the one hand dreams, visions, and parables, on the other, personal and biographical notes regarding the Great Opus. One of the latest and most perfect examples of this sort is the *Chymische Hochzeit* of Christian Rosencreutz (1616), actually written by Johann Valentin Andreae (1586–1634), a theologian of Württemberg who was also the author of *Turbo* (1616), a comedy written in Latin.[2] The hero of this play is a learned know-it-all who, disillusioned with the sciences, finally returns to Christianity. The *Chymische Hochzeit* represents the *opus Alchymicum* under the aspect of the *hierosgamos* of brother and sister (Venus gives birth to a hermaphrodite). But these things are only hinted at in veiled terms. Because the royal children are still too infantile (identification with the parents, incest with the mother), they are slain, purified, and put together again, by being subjected to every alchemical procedure. To be restituted, the bridal pair is taken over the sea, and a kind of Aegean festival is celebrated with nymphs and sea-goddesses and a paean to love is sung. Rosencreutz is revealed as the father of the young king or, respectively, the royal couple.

[1693] Alchemy had long known that the mystery of transformation applies not only to chemical materials but to man as well. The central figure is Mercurius, to whom I have devoted a special study.[3] He is a chthonic spirit, related to Wotan and the Devil.

[1694] Faust is introduced like Job, but it is not he who suffers; it is others who suffer through him, and even the Devil is not left unscathed. Mercurius enters in the shape of Mephistopheles (Devil and Satan), as a dog to begin with, son of Chaos, and fire (alch. *filius canis*, arises out of chaos, *natura ignea*). He becomes the servant of Faust (*familaris, servus fugitivus*). Mephisto has two ravens (cf. Wotan)[1]. He is the “northern phantom” and has his “pleasure-ground” in the “north-west.”

[1695] The axiom of Maria (3 + 1) pervades the whole work (4 main phases, 4 thieves, 4 (−1) grey women, 4 elements, Pluto’s four-in-hand team of horses, 3 + 1 boys, 1 + 2 + 3 + 4 = 10 in the witches’ tables, 3–4, 7–8 Kabiri, “Three and one and one and three,” etc.).

[1696] Mephisto brings about the projection onto the anima with its tragic end (child murder. There follows the suppression of Eros by the power drive Walpurgisnacht = overpowering by the shadow). In the fire magic and the gold swindle there appears the Boy Charioteer, a Mercurius *juvenis*, on the one hand hermaphrodite like his preform, the Devil, a *kyllenios*, and on the other an analogy to Christ and the Holy Spirit; at the same time he brings the wild host (Wotan!).

[1697] The underworld tripod embodies the feminine chthonic trinity, Diana, Luna, Hecate, and Phorkyads). It corresponds to the *vas hermeticum* (and the early Christian communion table of the catacombs with 3 loaves and 1 fish. The *Tripus Aureus* of alchemy is the one that Hephaestus cast into the sea.

[1698] Faust falls into a faint when he tries to possess Helen. This is the beginning of Phase II, and the second upsurge of Eros. Faust is again rejuvenated (as in Phase I) as the Baccalaureus; the Devil, however, is “old.” The Homunculus corresponds to the Boy Charioteer. His father is Wagner (Rosencreutz); his cousin is the Devil, hence Mercurius in a younger shape. Faust is taken to the classic “world of fable” (collective unconscious) for “healing.” The “water” heals (*aqua permanens, mare nostrum*). From it emerges the mountain (rebirth of the personality, alch. arising of the *terra firma* out of the sea). The Aegean Festival is the *hierosgamos* of Homunculus and Galatea (both are “stones brought to life”) in the sea. Touching the tripod with the key and the *hierosgamos* prefigure the “chymical” marriage of Faust to Helen, the sister anima. Their child Euphorion is the third renewal form of Mercurius.

[1699] Phase III ends with the death of Euphorion, and once again the next and last phase begins with the power drive. The devout Philemon and Baucis are murdered. After Faust’s death the Devil is cheated. The conflict goes on. Faust’s place is taken by his “entelechy,” the *puer aeternus*, who never can realize his united double nature because Faust is always the victim of whatever his shape may be at the time. He loses himself in smatterings of knowledge, in autoerotic Eros, in magic and deception, in the delusion of being a demigod (Helena), and finally in the inflation of thinking himself the saviour of the whole world. He is always blind about himself, does not know what he is doing, and lacks both responsibility and humour. But the Devil knows who he himself is; he does not lie to himself, he has humour and the small kind of love (insects), all of which Faust lacks. The shadow cannot be redeemed unless consciousness acknowledges it as a part of its own self—that is, understands its compensatory significance. The "blessed boy" is therefore only a representation of a prenatal state that in no way throws light on what the experience of earthly life was really for. Dr. Marianus is the "son of the mother." A possible parallel might be an eighth-century alchemist, Morienes, Morienus, Marianus,[4] who was one of the most spiritual of all alchemists and understood the *opus* as a human transformation system. He says: "Temporum quidem longa mutatio hominem sub tempore constitutum confundit et mutat … ultimam autem mutationem mors dira subsequitur."[5]

ALCHEMY AND PSYCHOLOGY[1]

[1700] Throughout the history of alchemy we find—besides a considerable knowledge of substances (minerals and drugs) and a limited knowledge of the laws of chemical processes—indications of an accompanying "philosophy" which received the name "Hermetic" in the later Middle Ages. This natural philosophy appears first and particularly clearly in the Greek alchemists of the first to the sixth centuries A.D. (Pseudo-Demokritus, Zosimos of Panopolis, and Olympiodorus). It was also especially evident in the sixteenth and seventeenth centuries, when it reached its full development. This development owed a great deal to Paracelsus and his pupils (Gerard Dorn and Heinrich Khunrath). In the interval between these two periods, philosophical speculation gave way to a more religious tendency (ideas were produced which ran parallel to the dogmatic concepts), hand in hand with a "mystical" tendency which gives alchemy its peculiar character. As the alchemists had no real knowledge of the nature and behaviour of chemical substances, they drew conscious parallels between the unknown processes and mythological motifs and thus "explained" the former (cf. Dom Pernety, *Dictionnaire mytho-hermétique*, 1756) and they amplified these unknown processes by the projection of unconscious contents. This explains a peculiarity of the texts: on the one hand, the authors repeat what was said by their predecessors again and again and, on the other, they give a free rein to unlimited subjective fantasy in their symbolism. Comparative research has proved that the alchemical symbols are partly variations of mythological motifs, belonging to the conscious world of the alchemists, and partly spontaneous products of the unconscious. This becomes evident in the parallel character of the symbolism in modern dreams and that of alchemy. The alchemical symbols portray partly the substances or their unknown "mystical" nature and partly the process which leads to the goal of the work. It is the latter aspect that gives rise to the most highly pictorial development. The principal symbol of the substance that is transformed during the process is *Mercurius*. His portrait in the texts agrees in all essentials with the characteristics of the unconscious.

[1701] At the beginning of the process, he is in the *massa confusa*, the chaos or *nigredo* (blackness). In this condition, the elements are fighting each other. Here Mercurius plays the role of the *prima materia*, the transforming substance. He corresponds to the Nous or Anthropos, sunk in Physis, of Greek alchemy. In later days he is also called the "world soul in chains," a "system of the higher powers in the lower," etc. This depicts a dark ("unconscious") condition of the adept or of a psychic content. The procedures in the next phase have the purpose of illuminating the darkness by a *union of the opposed elements*. This leads to the *albedo* (whitening), which is compared to the sunrise or to the full moon. The white substance is also conceived as a pure body which has been refined by the fire but which still lacks a soul. It is considered to be feminine and is therefore called *sponsa* (bride), silver, or moon. Whereas the transformation of the darkness into light is symbolized by the theme of the fight with the dragon, it is the motif of the *hierosgamos* (sacred marriage of sister and brother or mother and son) which appears in this phase. The quaternity (*quaternio*) of the elements here becomes a duality (*binarius*). The reddening (*rubedo*) follows the whitening. By means of the *coniunctio* the moon is united with the sun, the silver with the gold, the female with the male.

[1702] The development of the *prima materia* up to the *rubedo (lapis rubeus, carbunculus, tinctura rubra, sanguis spiritualis s. draconis*, etc.) depicts the conscious realization (*illuminatio*) of an unconscious state of conflict which is henceforth kept in consciousness. During this process, the scum (*terra damnata*) which cannot be improved must be thrown out. The white substance is compared to the *corpus glorificationis*, and another parallel is the *ecclesia*. The feminine character of the *lapis albus* corresponds to that of the unconscious, symbolized by the moon. The sun corresponds to the "light" of consciousness.

[1703] Becoming conscious of an unconscious content amounts to its integration in the conscious psyche and is therefore a *coniunctio Solis et Lunae*. This process of integration is one of the most important, helpful factors in modern psychotherapy, which is pre-eminently concerned with the psychology of the unconscious, for both the nature of consciousness and that of the unconscious are altered by it. As a rule the process is accompanied by the phenomenon of the *transference*, that is, the projection of unconscious contents on to the doctor. We also meet this phenomenon in alchemy, where a woman adept often plays the role of the *soror mystica* (Zosimos and Theosebeia, Nicolas Flamel and Peronelle, John Pordage and Jane Leade, and in the nineteenth century Mr. South and his daughter, Mrs. Atwood).

[1704] The *coniunctio* produces the *lapis philosophorum*, the central symbol of alchemy. This lapis has innumerable synonyms. On the one hand, its symbols are quaternary or circular figures and, on the other, the *rebis* or the hermaphroditic Anthropos who is compared to Christ. He has a trichotomus form (*habat corpus, animam et spiritum*) and is also compared to the Trinity (*trinus et unus*). The symbolism of the *lapis* corresponds to the mandala (circle) symbols in dreams, etc., which represent wholeness and order and therefore express the personality that has been altered by the integration of the unconscious. The alchemical *opus* portrays the process of individuation but in a projected form because the alchemists were unconscious of this psychic process.[2]

XIV

THE SPIRIT IN MAN, ART, AND LITERATURE

(related to Volume 15 of the Collected Works)

MEMORIAL TO J. S.[1]

[1705] Death has laid its hand upon our friend. The darkness out of which his soul had risen has come again and has undone the life of his earthly body, and has left us alone in pain and sorrow.

[1706] To many death seems to be a brutal and meaningless end to a short and meaningless existence. So it looks, if seen from the surface and from the darkness. But when we penetrate the depths of the soul and when we try to understand its mysterious life, we shall discern that death is not a meaningless end, the mere vanishing into nothingless—it is an accomplishment, a ripe fruit on the tree of life. Nor is death an abrupt extinction, but a goal that has been unconsciously lived and worked for during half a lifetime.

[1707] In the youthful expansion of our life we think of it as an ever-increasing river, and this conviction accompanies us often far beyond the noonday of our existence. But if we listen to the quieter voices of our deeper nature we become aware of the fact that soon after the middle of our life the soil begins its secret work, getting ready for the departure. Our of the turmoil and terror of our life the one precious flower of the spirit begins to unfold, the four-petaled flower of the immortal light, and even if our mortal consciousness should not be aware of its secret operation, it nevertheless does its secret work of purification.

[1708] When I met J. S. for the first time I found in him a man of rare clarity and purity of character and personality. I was deeply impressed with the honesty and sincerity of his purpose. And when I worked with him, helping him to understand the intricacies of the human psyche, I could not but admire the kindness of his feeling and the absolute truthfulness of his mind. But though it was a privilege to teach a man of such rare human qualities, it was not the thing that touched me most. Yes, I did teach him, but he taught me too. He spoke to me in the eternal language of symbols, which I did not grasp until the awe-inspiring conclusion, the culmination in death, became manifest. I shall never forget how he liberated his mind from the turmoil of modern business life, and how, gradually working back, he freed himself from the bonds that held him fast to his earthly parents and to his youth; and how the eternal image of the soul appeared to him, first dimly, then slowly taking shape in the vision of his dreams, and how finally, three weeks before his death, he beheld the vision of his own sarcophagus from which his living soul arose.

[1709] Who am I that I should dare say one word beyond this vision? Is there a human word that could stand against the revelation given to the chosen one? There is none.

[1710] Let us return, therefore, to the external language and let us hear the words of the sacred text. And as the ancient words will give truth to us, we will give life to them. (I Corinthians 13; 15:31–55.)

FOREWORD TO SCHMID-GUISAN: “TAG UND NACHT”[1]

[1711] The atmosphere of this book is only too familiar to me. On reading the manuscript, I found it difficult at first to extricate myself from the toils of day-to-day psychotherapeutic practice—until I succeeded in viewing the book against its historical background. It is indeed something of a literary orphan, seeming to have no affinities with the present. Its strange form—the adventures of an allegorical hero—reminds one of the eighteenth century. But this is no more than a reminder, for the book is quite alien to the eighteenth century in its feeling. The problem of feeling is altogether modern, and the book opens up a world of experience that seems to have been locked away since the time of René d’Anjou—the whole sensuous world of Eros, which the latest Papal Encyclical on Christian marriage[2] and the penalistic conscience of modern man have conspired to suppress in a quite terrifying manner. Actually it is an esoteric book, a petal fallen from the unfading mystic rose which the troubadours accused the Church of hiding under a veil of secrecy. As though any Church had ever known the secret, or knowing it could have tolerated it! This book is neither for nor of the masses. For the multitude, it had better not been written, or should be read only because of its bad reputation. They will be lucky if they emerge unscathed. Nearly five hundred years ago a similar book was written, again at a cultural turning-point, and again a petal from that mystic rose—a knightly adventure and a stumbling-block to the vulgar, the *Hypnerotomachia*[3] of that celebrated Poliphilo, who for a moment twitched the veil from the psychic background of the Cinquecento. From the preface to that book I would like to set down a classical passage which shows how the Knights of the Rose join hands across the centuries:

> From this it is evident that all wise men have practised their sciences beneath the shadow of the fairest, innermost secrets of Love. Love was, and is still, the graceful brush which traces out all that is strange and

appointed by Fate, as much among the higher as the lower powers, and all that is subject to them.…

Know, see and hear, and you will wisely remark that the most splendid, sublime, and precious mysteries are hidden beneath the beauties of Love, from which they issue anew, for Love is the joyful soul of everything that lives.…

Should I discover that some profane person had put forth his odious hand to this book to finger it, or that some unworthy creature should make bold to turn its pages, or that some shameless dissembler, under the cloak of piety, should derive a vulgar pleasure from it, or that some evil-minded spectator of these sovereign gifts should seek, from boredom, the profit that by right belongs only to loving hearts, I would break the pen which has described so many configurations of the great secret, and, utterly forgetful of myself, would expunge all memory of the satisfaction I have found in the narration, delicately veiled in the semblance of pretty fictions, of things most wonderful and rare, which serve but to elevate a man to all that is virtuous, and denying myself the very life of my life, I would abstain from the eager pursuit of those voluptuous charms which draw men towards the sacred delights.[4]

[1712] Since witless literal-mindedness has not died out in four hundred years, I would like to impress upon the reader the classical warning which the unconscious gave Poliphilo on his journey into the darkness: “Whoever thou mayest be, take of this treasure as much as thou willst. Yet I warn thee, take from the head and touch not the body.”[5]

Hans Schmid-Guisan: In Memoriam[6]

[1713] Life is in truth a battle, in which friends and faithful companions-in-arms sink away, struck by the wayward bullet. Sorrowfully I see the passing of a comrade, who for more than twenty years shared with me the experiment of life and the adventure of the modern spirit.

[1714] I first met Hans Schmid-Guisan at a conference of psychiatrists in Lausanne,[6a] where I discussed for the first time the impersonal, collective nature of psychic symbols. He was then assistant physician at the Mahaim Clinic in Cery. Not long afterwards he came to Zurich, in order to study analytical psychology with me. This collaborative effort gradually broadened into a friendly relationship, and the problems of psychological practice frequently brought us together in serious work or round a convivial table. At that time we were especially interested in the question of the relativity of psychological judgments, or, in other words, the influence of temperament on the formation of psychological concepts. As it turned out, he developed instinctively an attitude type which was the direct opposite of my own. This difference led to a long and lively correspondence,[7] thanks to which I was able to clear up a number of fundamental questions. The results are set forth in my book on types.

[1715] I remember a highly enjoyable bicycle tour which took us to Ravenna, where we rode along the sand through the waves of the sea. This tour was a continual discussion which lasted from coffee in the morning, all through the dust of the Lombardy roads, to the round-bellied bottle of Chianti in the evening, and continued even in our dreams. He stood the test of this journey: he was a good companion and always remained so. He battled valiantly with the hydra of psychotherapy and did his best to inculcate into his patients the same humanity for which he strove as an ideal. He never actually made a name for himself in the scientific world, but shortly before his death he had the pleasure of finding a publisher for his book *Tag und Nacht,*[8] in which he set down many of his experiences in a form peculiarly his own. Faithful to his convictions, he wrote it as he felt he had to write it, pandering to nobody’s prejudices. His humanity and his sensitive psychological understanding were not gifts that dropped down from heaven, but the fruit of unending work on his own soul. Not only relatives and friends stand mourning today by his bier, but countless people for whom he opened the treasure-house of the psyche. They know what this means to them in a time of spiritual drought.

ON THE TALE OF THE OTTER[1]

[1716] In writing a few introductory words to this publication, one of his last, I am discharging a duty to my dead friend, Oskar A. H. Schmitz. I am not a literary man, nor am I competent to pass judgment on aesthetic questions. Moreover, the literary value of "The Tale of the Otter" is of little concern to me. I readily admit that, as a fairytale, it is as good or as bad as any other that a writer has invented. Such tales, as we know, even though invented by a great writer, do not breathe the flowery, woodland magic of the popular fairytale. Usually they can be shown to be products of the author's personal psychology, and they have a problematical air that makes them slightly unnatural. This is true also of "The Tale of the Otter." It is only a literary form for a content that could have been expressed in quite other words and in quite another way. Nevertheless, it was not chosen fortuitously. The content clothed itself in fairytale form not with the secret pretence of being an allegory, but because in this guise it could find the simplest and most direct access to the reader's heart. Childlike simplicity of heart was a basic trait of Schmitz's nature, known to very few people, and one which he himself recognized only late in life. Thanks to this simplicity, he could speak to the hearts of those he wished to touch.

[1717] I happen to know how the tale came to be written. It was not born of any conscious intention to reach a particular kind of public; it was never even thought out, but flowed unconsciously from his pen. Schmitz had learnt how to switch off his critical intellect for certain purposes and to place his literary powers at the disposal of the heart's wisdom. In this way he was able to say things that are infinitely far removed from the usual style of his writings. At times, it became a real necessity for him to express himself in this way. For many things which reason wrestles with in vain flow easily and effortlessly into a pen emptied of all critical intentions.

[1718] The result may seem very simple, indeed naïve, and anyone who read it as one reads a popular fairytale would be disappointed. It is equally idle to take it as an allegory. Schmitz himself did not really know what his tale meant. He told me so himself, for we often talked about it.

[1719] The utterances of the heart—unlike those of the discriminating intellect—always relate to the whole. The heartstrings sing like an Aeolian harp only under the gentle breath of a mood, an intuition, which does not drown the song but listens. What the heart hears are the great, all-embracing things of life, the experiences which we do not arrange ourselves but which happen to us. All the pyrotechnics of reason and literary skill pale beside this, and language returns to the naïve and childlike. Simplicity of style is justified only by significance of content, and the content acquires its significance only from the revelation of experience. The decisive experience of Schmitz's life was his discovery of the reality of the psyche and the overcoming of rationalistic psychologism. He discovered that the psyche is something that really exists. This changed his life and his work outlook.

[1720] For those who are vouchsafed such a discovery, the psyche appears as something objective, a psychic non-ego. This experience is very like the discovery of a new world. The supposed vacuum of a merely subjective psychic space becomes filled with objective figures, having wills of their own, and is seen to be a cosmos that conforms to law, and among these figures the ego takes its place in transfigured form. This tremendous experience means a shattering of foundations, an overturning of our arrogant world of consciousness, a cosmic shift of perspective, the true nature of which can never be grasped rationally or understood in its full implications.

[1721] An experience of this kind induces an almost frightening need to communicate with sympathetic fellow-beings, to whom one then turns with naïve words. "The Tale of the Otter" describes an experience of the unconscious and the resultant transformation both of the personality and of the figures in the psyche. The King stands for the ruling principle of consciousness, which strays further and further away from the unconscious. (The fish disappear from the waters of the kingdom.) The stagnation of consciousness finally compels the King to make contact with the unconscious again. (The King’s pilgrimage.) The otter, the unconscious partner of the ego, seeks to bring about a reconciliation with consciousness. (Gilgamesh-Eabani motif.) This is successful, and a new world of consciousness arises on an apparently firm foundation. But as the King represents only the best part of the personality, and not the inferior part, the shadow, which should also be included in the transformation, the old King dies and his good-for-nothing nephew succeeds to the throne. The second half of the tale is concerned with the far more difficult task of including the weaknesses of the personality and its useless, adolescent traits in the process of transformation. This is especially difficult because the shadow is burdened with a still more inferior, feminine component, a negative anima figure (Brolante, the harlot). While the masculine components are successfully brought into harmony with the vital instincts (represented by animals), there is a final separation between the spiritual and the physical nature of the anima. The masculine half is rescued from evil, but the feminine half becomes its victim.

[1722] “The Tale of the Otter” gives touching and modest expression to an all-embracing and all-transforming initiation. Read it with care and meditate upon it! For when all this has been fulfilled in him, Schmitz died. In this little fairytale he tells posterity how it fared with him and what transformations his soul had to undergo before it was ready to lay aside its garment and end its lifelong experiment.

IS THERE A FREUDIAN TYPE OF POETRY?[1]

[1723] Poetry, like every product of the human mind, is naturally dependent on a man's general psychological attitude. If a writer is sick, psychically sick, it is highly probable that whatever he produces will bear the stamp of his sickness. This is true with reservations, of course; for there actually are cases where the creative genius so far transcends the sickness of the creator that only a few traces of human imperfection are to be seen in the work. But these are exceptions; the general rule is that a neurotic poet will make neurotic poems. The more neurotic a poem is, the less it is a creative work of art and the more it is a symptom. It is therefore very easy to point out infantile symptoms in such cases and to view the product in the light of a particular theory; indeed, it is sometimes possible to explain a work of art in the same way as one can explain a nervous illness in terms of Freud's theory or Adler's. But when it comes to great poetry the pathological explanation, the attempt to apply Freudian or Adlerian theory, is in effect a ridiculous belittlement of the work of art. The explanation not only contributes nothing to an understanding of the poetry, but, on the contrary, deflects our gaze from that deeper vision which the poet offers. The Freudian and the Adlerian theory alike formulate nothing but the human-all-too-human aspects of the commonplace neurosis. So when one applies this point of view to great poetry, one is dragging it down to the level of dull ordinariness, when actually it towers above it like a high mountain. It is quite obvious that all human beings have father and mother complexes, and it therefore means nothing if we discern traces of a father or mother complex in a great work of art; just as little as would the discovery that Goethe had a liver and two kidneys like any other mortal.

[1724] If the meaning of a poetic work can be exhausted through the application of a theory of neurosis, then it was nothing but a pathological product in the first place, to which I would never concede the dignity of a work of art. Today, it is true, our taste has become so uncertain that often we no longer know whether a thing is art or a disease. I am convinced, however, that if a work of art can be explained in exactly the same way as the clinical history of a neurosis, either it is not a work of art, or the explainer has completely misunderstood its meaning. I am quite convinced that a great deal of modern art, painting as well as poetry, is simply neurotic and that it can, consequently, be reduced like an hysterical symptom to the basic, elementary facts of neurotic psychology. But so far as this is possible, it ceases to be art, because great art is man’s creation of something superhuman in defiance of all the ordinary, miserable conditions of his birth and childhood. To apply to this the psychology of neurosis is little short of grotesque.

FOREWORD TO GILBERT: “THE CURSE OF INTELLECT”[1]

[1725] The author has kindly given me a chance of reading his book in manuscript. I must say, I have read it with the greatest interest and pleasure. It is most refreshing, after the whole nineteenth century and a stretch of the twentieth, to see the intellect once more turned loose upon herself, not exactly in the dispassionate form of a “Critique of Pure Reason,” but in the rather impassioned way of a most temperamental onslaught on herself. As a matter of fact, it is a wholesome and vitalizing tearing into sorry shreds of what all “healthy-minded” people believed in as their most cherished securities. I am human enough to enjoy a juicy piece of injustice when it comes in the right moment and in the right place. Sure enough, Intellect has done her worst in our “Western Civilization,” and she is still at it with undoubted force. Kant could still afford to deal with the contemporaneous intellect in a polite, careful, and gentle way, because she then was but a mere fledgling. But our time is concerned with a monster completely grown up and so fat that it can easily begin to devour itself.

[1726] At the funeral somebody will be allowed to say only something nice about the deceased. In anticipation of that future event I will say it now: The chief trouble seems to be that the intellect escaped the control of man and became his obsession, instead of remaining the obedient tool in the hands of a creator, shaping his world, adorning it with the colourful images of his mind.

January 1934

FOREWORD TO JUNG: "WIRKLICHKEIT DER SEELE" (1934)[1]

[1727] This, the fourth volume of my "Psychologische Abhandlungen," contains a number of essays that faithfully reflect the manifold facets of the more recent psychology. It is not long since the psychology of the personality broke free from the all too narrow confines of the consulting room on the one hand, and of materialistic and rationalistic assumptions on the other. It is therefore no wonder if much still clings to it that is in need of clarification. Until recently the worst chaos prevailed in the realm of theory, and only now have serious attempts been made to clear away the confusion. Dr. Kranefeldt's contributions[2] are devoted to this task. Dr. Rosenthal's contribution[3] is an application of the typological viewpoint to the scientific study of religion. The archetypical figures of anima and animus form a special department of depth psychology. Emma Jung discusses the phenomenology of the animus complex.[4]

[1728] My own contributions are concerned on the one hand with the philosophical problems of modern psychology, and on the other hand with its applications. Since this time, too, my essays came into being as answers to questions addressed to me by the public,[5] their unusual diversity may be taken as an indication that recent psychological insights have left their mark on as many diverse realms of the mind. Not only doctors and teachers, but writers and educated laymen, and—last but not least—even publishers are now evincing an interest in things psychological.

[1729] These many facets of complex psychology, lighting up the most varied walks of life and domains of the mind, are in turn a much simplified reflection of the measureless diversity and iridescence of the psyche itself. Although one could never dream of exhausting its mysteries and fathoming all its secrets, it nevertheless seems to me one of the foremost tasks of the human mind to labour without cease for an ever deeper knowledge of man's psychic nature. For the greatest enigma in the world, and the one that is closest to us, is man himself.

September 1933

FOREWORD TO MEHLICH: “J. H. FICHTES SEELENLEHRE UND IHRE BEZIEHUNG ZUR GEGENWART”[1]

[1730] Although I owe not a little to philosophy, and have benefited by the rigorous discipline of its methods of thought, I nevertheless feel in its presence that holy dread which is inborn in every observer of facts. The unending profusion of concepts spawning yet other concepts, rolling along like a great flood in the history of philosophy, is only too likely to inundate the little experimental gardens of the empiricist, so carefully marked out, swamping his well-ploughed fields, and swallowing up the still unexplored virgin land. Confronting the flux of events with unprejudiced gaze, he must fashion for himself an intellectual tool stripped of all preconceptions, and anxiously eschew as perilous temptations all those modes of thinking which philosophy offers him in such excessive abundance.

[1731] Because I am an empiricist first and foremost, and my views are grounded in experience, I had to deny myself the pleasure of reducing them to a well-ordered system and of placing them in their historical and ideological context. From the philosophical standpoint, of whose requirements I am very well aware, this is indeed a painful omission. Even more painful to me, however, is the fact that the empiricist must also forswear an intellectual clarification of his concepts such as is absolutely imperative for the philosopher. His thinking has to mould itself to the facts, and the facts have as a rule a distressingly irrational character which proves refractory to any kind of philosophical systematization. Thus it comes about that empirical concepts are concerned for the most part with the chaos of chance events, because it is their function to produce a provisional order amid the disorder of the phenomenal world. And because they are wholly bent on this urgent task, they neglect—sometimes only too readily—their own philosophical development and inner clarification, for a thinker who performs the first task satisfactorily will seldom be able to complete the second.

[1732] These two aspects became overwhelmingly clear to me as I read this admirable study of Fichte's psychology: on the one hand the apparent carelessness and vagueness of my own concepts when it comes to systematic formulation, and on the other the precision and clarity of a philosophical system which is singularly unencumbered by empirical impedimenta. The strange but undeniable analogy between two points of view derived from totally different sources certainly gives one food for thought. I am not aware of having plagiarized Fichte, whom I have not read. Naturally I am familiar with Leibniz, C. G. Carus, and von Hartmann, but I never knew till now that my psychology is "Romantic." Unlike Rickert[2] and many other philosophers and psychologists, I hold that, in spite of all abstraction, objectivity, absence of bias, and empiricism, everyone thinks as *he* thinks and sees as *he* sees. Accordingly, if there is a type of mind, or a disposition, that thinks and interprets "romantically," analogous conclusions will emerge no matter whether they are coloured by the subject or by the object. It would be vain to imagine—gamely competing with Baron Münchhausen—that one could disembarrass oneself of one's own weight and thus get rid of the ultimate and most fundamental of all premises—one's own disposition. Only an isolated and hypertrophied psychic function is capable of cherishing such an illusion. But a function is only a part of the human whole, and its limited character is beyond all doubt. Were it not for these considerations the analogy between Fichte and me would certainly have to be regarded as a minor miracle.

[1733] It is a bold undertaking—for which the author deserves all the more credit—to bring Fichte into line with a modern empirical psychology based on facts that were wholly inaccessible to this philosopher—an empiricism, morever, which has unearthed conceptual material that is singularly unsuited to philosophical evaluation. But it seems that this undertaking has been successful, for I learn to my amazement that the Romantic Movement has not been relegated to the age of fossils, but still has living representatives. This is probably no accident, for it appears that besides the self-evident experience of the "objective" world there is an *experience of the psyche,* without which an experience of the world would not be possible at all. It seems to me that the secret of

Romanticism is that it confronted the all-too-obvious *object* of experience with a *subject* of experience, which it proceeded to objectify thanks to the infinite refractive powers of consciousness. There is a psychology that always has another person or thing for an object—a fairly well-differentiated kind of behaviourism which might be described as "classical." But besides this there is a psychology which is a knowing of the knower and an experiencing of the experiment.

[1734] The indirect influence of the type of mind exemplified by Hume, Berkeley, and Kant can hardly be overestimated. Kant in particular erected a barrier across the mental world which made it impossible for even the boldest flight of speculation to penetrate into the object. Romanticism was the logical counter-movement, expressed most forcefully, and most cunningly disguised, in Hegel, that great psychologist in philosopher's garb. Nowadays it is not Kant but natural science and its de-subjectivized world that have erected the barrier against which the speculative tendency rebounds. Its essentially behaviourist statements about the object end in meaninglessness and nonsense. That is why we seek the meaning in the statements of the subject, believing we are not in error if we assume that the subject will first of all make statements about itself. Is it the empiricist in me, or is it because analogy is not identity, that makes me regard the "Romantic" standpoint simply as a point of departure and its statements as "comparative material"?

[1735] I admit that this attitude is disappointingly sober, but the psychic affinity with a romantic philosopher prompts me to a critical utterance which seems to me the more in place as there are only too many people for whom "Romantic" always means something out of a romance.

[1736] Apart from this critical proviso, which the author herself stresses, her book is a welcome contribution of the study of a specific attitude of mind which has recurred many times in the course of history and presumably will also recur in the future.

FOREWORD TO VON KOENIG-FACHSENFELD: “WANDLUNGEN DES TRAUMPROBLEMS VON DER ROMANTIK BIS ZUR GEGENWART”[1]

[1737] The author has asked me to write a foreword to her dissertation. I am happy to comply with her request because this comprehensive and well-documented work deserves to be known to a wider scientific public. Although we already possess a number of valuable “synoptic” studies which give a fairly complete account of the various doctrines prevalent in modern psychology—I would mention in particular the works of W. Kranefeldt, G. R. Heyer, and Gerhard Adler—there was always a noticeable gap as regards the historical and philosophical side of complex psychology. The more conscious it became of the magnitude of its task—the study of the human psyche in its totality—the more contacts it made with other fields of thought where the psyche has an equal right to speak, above all with philosophy. For whenever a science begins to grow beyond its narrow specialist boundaries, the need for fundamental principles is forced upon it, and with this it moves into the sovereign sphere of philosophy. If the science happens to be psychology, a confrontation with philosophy is unavoidable for the very reason that it had been a philosophic discipline from the beginning, resolutely breaking away from philosophy only in quite recent times, when it established itself within the philosophical and the medical faculties as an independent empirical science with mechanistic techniques. The experimental psychology inaugurated by W. Wundt was succeeded by the psychology of the neuroses, which had been developed almost simultaneously by Freud in Vienna and by Pierre Janet in Paris. My own course of development was influenced primarily by the French school and later by Wundt’s psychology. Later, in 1906, I made contact with Freud, only to part company with him in 1913, after seven years of collaboration, owing to differences of scientific opinion. It was chiefly considerations of principle that brought about the separation, above all the recognition that psychopathology can never be based exclusively on the psychology of psychic disease, which would restrict it to the pathological, but must include normal psychology and the full range of the psyche. Modern medicine quite rightly adheres to the principle that pathology must be based on a thorough knowledge of normal anatomy and physiology. The criterion by which we judge disease does not and cannot lie in the disease itself, as most of the medieval physicians thought, but only in the normal functioning of the body. Disease is a variation of the normal. The same considerations apply to therapy.

[1738] For a long time it seemed as though experimental and medical psychologists could get along with purely scientific methods. But the view gradually gained ground that a critique of certain ideals originating in the humanistic disciplines was not out of place, since a careful investigation of the aetiology of pathological states had shown how the general attitude of the patient which led to the morbid variation depended on just these ideal or moral premises, not to mention the interpretation of facts and the theories resulting therefrom. But as soon as medical psychology reached this point, it turned out that the principles which had hitherto held unlimited sway over men’s minds were of a purely rationalistc or materialistic nature, and, in spite of their “scientific” pretensions, had to be subjected to philosophical criticism because the object of their judgment was the *psyche itself*. The psyche is an extremely complex factor, so fundamental to all premises that no judgment can be regarded as “purely empirical” but must first indicate the premises by which it judges. Modern psychology can no longer disguise the fact that the object of its investigation is its own essence, so that in certain respects there can be no “principles” or valid judgments at all, but only *phenomenology*—in other words, *sheer experience*. On this level of knowledge, psychology has to abdicate as a science, though only on this very high level. Below that, judgments and hence science are still possible, provided that the premises are always stated, and to that extent the prospects for psychology as a science are by no means hopeless. But once it ceases to be conscious of the factors conditioning its judgments, or if it has never attained to this consciousness, it is like a dog chasing his own tail.

[1739] So far, then, as psychology takes its own premises into account, its relevance to philosophy and the history of ideas is self-evident, and this is where the present book comes in. No one can deny that certain of these premises are a restatement of ideas dating back to the time of the Romantics. However, it is not so much the ideal premises that justify the author's historical approach as the supposedly "modern" phenomenological standpoint of "sheer experience," which was not only anticipated by the Romantics but actually pertains to their very nature. It was the essence of Romanticism to "experience" the psyche rather than to "investigate" it. This was once again an age of philosopher-physicians, a phenomenon that was observed for the first time in the post-Paracelsan era, more especially in philosophical alchemy, whose most important practitioners were usually doctors. In keeping with the pre-scientific spirit of the times, the Romantic psychology of the early nineteenth century was a child of Romantic natural philosophy—one thinks of C. G. Carus—although the beginnings of empiricism were already discernible in Justinus Kerner. The psychology of the sixteenth century, on the other hand, still had occult and religious undercurrents, and though it called itself "philosophy" a later, "enlightened" age would hardly have countenanced the name. The psyche as experience is the hallmark of the Romantics who sought the blue flower,[2] as well as of the philosophical alchemists who sought the *lapis noster*.

[1740] This book performs the valuable service of unlocking a veritable treasure-house of contemplative Romantic poetry for modern psychology. The parallelism with my psychological conceptions is sufficient justification for calling them "Romantic." A similar inquiry into their philosophical antecedents would also justify such an epithet, for every psychology that takes the psyche as "experience" is from the historical point of view both "Romantic" and "alchemystical." Below this experimental level, however, my psychology is scientific and rationalistic, a fact I would beg the reader not to overlook. The premise underlying my judgments is the *reality of everything psychic*, a concept based on the appreciation of the fact that the psyche can also be pure experience.

[1741] The author has carried out her task with great professional expertise, and I warmly recommend her book to everyone who is interested in the problems of modern complex psychology.

FOREWORD TO GILLI: “DER DUNKLE BRUDER”[1]

[1742] By writing a foreword to Gertrud Gilli’s drama in verse, I do not wish to evoke the impression that it needs a psychological explanation in order to heighten its effect. Works of art are their own interpretation. *The Dark Brother* does not share the modern obscurantism of certain contemporary paintings, nor is it a direct product of unconscious activity which would require interpretation and transcription into generally intelligible language.

[1743] The play is modern, however, in so far as the central process of Christianity, the divine drama, is reflected in the sphere of human motivations. A bold stroke indeed! But has not the personality of Judas always been a problematical figure in the redemption mystery? For certain Protestant theologians and historians, Christ himself has been stripped of his divine incarnation and become simply a founder of religion, a very superior and exemplary one, it is true, and his passion mere human suffering for the sake of an ideal, thus lending considerably more plausibility to the human protagonists and antagonists. Only in the mythological phase of the mind are heroes representatives of light and purity, and their adversaries embodiments of absolute evil. The real man is a mixture of good and bad, of self-determination and supine dependence, and the borderline between genuine ideals and personal striving for power is often very difficult to draw. As for the genius, his role as the mouthpiece and proclaimer of new truths is not always felt as an unmixed blessing by ordinary mortals, especially where religious beliefs are concerned.

[1744] In one form or another, the figure of the redeemer is universal because it partakes of our common humanity. It invariably emerges from the unconscious of the individual or the people when an intolerable situation cries out for a solution that cannot be implemented by conscious means alone. Thus the Messianic expectations of the Jews were bound to rise to fever pitch when, as a result of the corruption that followed in the wake of Herod the Great, all hope of an independent sacerdotal order or kingdom had vanished, and the country had become a Roman province lacking any form of autonomy. It is therefore readily understandable that these Messianic expectations centred on a political redeemer, and that more than one enthusiastic patriot sought to fulfil this role—above all Judas of Galilee, whose insurrection is reported by Flavius Josephus,[2] and who, boldly but quite logically, entangles the eponymous hero of this drama in a similar task.

[1745] But underlying the divine drama there is a different plan, which is not concerned with man's outward, social, or political liberation. It focuses rather on the inner man and his psychic transformation. What is the use of changing the external conditions if man's inner attitude remains the same? It is all the same, psychologically, whether his subjection is the result of external circumstances or of intellectual or moral systems. True "redemption" comes about only when he is led back to that deepest and innermost source of life which is generally called God. Jesus was the channel for a new and direct experience of God, and how little this depends on external conditions is amply demonstrated by the history of Christianity.

[1746] Man lives in a state of continual conflict between the truth of the external world in which he has been placed and the inner truth of the psyche that connects him with the source of life. He is pulled now to one side and now to the other until he has learnt to see that he has obligations to both. In this sense Gertrud Gilli's play gives expression to a universal and timeless human fact: beyond our personal and time-bound consciousness, in our interior selves, there is enacted the everlasting drama in which the all-too-human players reach out, yearning and shrinking at once, for the deeper truth, and seek to bend it to their own purposes and their own ruin.

[1747] If Judas in Gilli's play is depicted as the dark brother of Jesus, and if his character and fate are reminiscent of Hamlet's, there may well be deeper reasons for this. One could imagine him more active and aggressive, for instance as a fiery patriot who has to get rid of Jesus from inner necessity, because Jesus as the corrupter of the people obstructs his plans for their liberation, or else because Judas sees him as the political

Messiah and then betrays him out of disappointment and rage. In this sense, too, Judas would be his dark brother, since in the story of the Temptation the devil of worldly power stepped up to Jesus in much the same way as Mara tempted the Buddha. Judas might easily have become a hero after the manner of classical drama. But because his dependence catches him on every side and he can scarcely act on his own initiative, he becomes an exponent of the human drama which, though played out within the confines of the earth's shadow, has at all times accompanied the divine drama and often eclipsed it.

GÉRARD DE NERVAL[1]

[1748] Gérard de Nerval (pseudonym of Gérard Labrunie, 1808–1853) was a lyric poet and translator of Goethe and Heine. He is best known by his posthumously published novel *Aurélia*, in which he relates the history of his anima and at the same time of his psychosis. The dream at the beginning, of a vast edifice and the fatal fall of a winged daemon, deserves special attention. The dream has no lysis. The daemon represents the self, which no longer has any room to unfold its wings. The disastrous event preceding the dream is the projection of the anima upon "une personne ordinaire de notre siècle," with whom the poet was unable to work on the *mysterium* and in consequence jilted Aurélia. Thus he lost his "pied à terre" and the collective unconscious could break in. His psychotic experiences are largely descriptions of archetypal figures. During his psychosis the real Aurélia appears to have died, so that his last chance of connecting the unconscious with reality, and of assimilating its archetypal contents, vanished. The poet ended by suicide. The MS of *Aurelia* was found on his body.

FOREWORD TO FIERZ-DAVID: “THE DREAM OF POLIPHILO”[1]

[1749] It must be twenty-five years since Francesco Colonna’s *Hypnerotomachia Poliphili* first came my way in the French translation published by Béroalde de Verville in 1600. Later, in the Morgan Library, New York, I saw and admired the first Italian edition[2] with its superb woodcuts. I set about reading the book, but soon got lost in the mazes of its architectural fantasies, which no human being can enjoy today. Probably the same thing has happened to many a reader, and we can only sympathize with Jacob Burckhardt, who dismissed it with a brief mention while bothering little about its contents. I then turned to the “Recueil Stéganographique,” Béroalde’s Introduction, and in spite of its turgid and high-flown verbiage I caught fleeting glimpses which aroused my curiosity and encouraged me to continue my labours, for labours they are in a case like this. My efforts found their reward, for plodding on, chapter by chapter, I sensed, rather than recognized, more and more things I was later to encounter in my study of alchemy. Indeed, I cannot even say how far it was this book that put me on the track of the royal art. In any case, not long afterwards I began to collect the old Latin treatises of the alchemists, and in a close study of them lasting many years I did eventually succeed in unearthing those subterranean processes of thought from which sprang not only the world of alchemical imagery but also Poliphilo’s dream. What first found expression in the poetry of the minnesingers and troubadours can be heard here as a distant echo of a dreamlike past, but it is also a premonition of the future. Like every proper dream, the *Hypnerotomachia* is Janus-faced: it is a picture of the Middle Ages on the brink of the Renaissance—a transition between two eras, and therefore highly relevant to the world today, which is even more obviously a time of transition and change.

[1750] So it was with considerable interest that I read the manuscript sent me by Mrs. Linda Fierz-David, for it is the first serious attempt to unlock Poliphilo’s secret and to unravel its crabbed symbolism with the help of modern psychology. In my opinion, her undertaking has been entirely successful. She has pursued the psychological problem which forms the central theme of the book through all the twists and turns of the story, demonstrating its personal and suprapersonal character as well as bringing to light its significance for the world of that time. Many of her interpretations are so astute and illuminating that this seemingly outlandish and baroque tale, eagerly read in the sixteenth and seventeenth centuries, is once more brought within the intellectual orbit of the modern reader. With an intelligence equalled only by her intuition, she has painted a picture of that peculiar Renaissance psychology whose literary monument is the *Hypnerotomachia*, while giving that picture a timeless background. Thus, the tale reappears in all the freshness of its original colours and makes a direct appeal to the man of today by virtue of its imperishable psychological truth.

[1751] On its voyage through uncharted seas, the book owes some of its happiest discoveries to the sensitiveness of the feminine mind, which, delicately indiscreet, can take a peep behind Francesco Colonna's richly ornate baroque façade. It was because of this feminine gift that St. Catherine was consulted by the heavenly assembly "in all difficult cases," as we learn from Anatole France's amusing account in *Penguin Island*. "While on earth, St. Catherine had confounded fifty very learned doctors. She was versed in the philosophy of Plato as well as the Scriptures, and possessed rhetoric." Hence, it is no matter for surprise if Mrs. Fierz-David has brought off some dazzling feats of interpretation which throw considerable light on the obscurities of Poliphilo's symbolism. The tortuous ways of the masculine mind, setting traps for itself with its own vanities, are here exposed and illuminated, and modern man would do well to learn from this example.

[1752] In her commentary, she takes us deep into psychological problems that remain unfathomable to the modern mind and set it a hard task. The book is not easy reading—indeed, it requires some effort. But it is a rich and stimulating repast, and will amply reward the attentive reader who comes to meet it halfway. For myself, I am grateful to the author for the enriched knowledge and insight her book has brought me.

February 1946

FOREWORD TO CROTTET: “MONDWALD”[1]

[1753] The author of this book is no ordinary explorer, of whom there is no lack nowadays, but one who still understands the almost forgotten art of travelling with all his senses open. This art or, as we might also say, this gift bestowed by the grace of heaven, enables the traveller to bring back from distant shores more than can ever be captured by cameras and tape-recorders, to wit, his own experience through which we glimpse the lure of foreign lands and peoples. This alone makes them come alive for us as we listen to the tale of the clash of two worlds. The “subjectivity” so rightly feared by science here becomes a source of illumination, conveying to us flashes of insight which no description of facts however complete can attain. This is a matter of taking notes with scrupulous objectivity. Instead, the “sensitive traveller” creates an experience which does not, like a factual record, consist merely of the data of the senses and the intellect, but of those countless, indescribable, subliminal impressions which hold the traveller captive in a foreign land. Certainly his objective description tells us a great deal, but his emotion, his being carried away, means far more. It reveals something that cannot be expressed in words: the wholeness of prehistoric nature and preconscious humanity, which for the civilized man and inhabitant of a virtually enslaved earth is utterly alien and unfathomable. All sorts of possibilities hang invisibly in the air, yet somehow we have always known of them; realities of which an age-old, nearly forgotten knowledge in us evokes a distant echo; a longing that looks back to the golden haze of a childhood morning, and forward to fulfilment at the millennium. It is the intimation of a pristine wholeness, lost and now hoped for again, that hovers over the primeval landscape and its inhabitants, and only the story-teller’s emotion can bring it home to us. We understand and share his passionate desire to preserve and perpetuate this fathomless splendour, for which a National Park would be but a feeble substitute, and we lament with him the devastation that threatens it because of our civilizing barbarism. In Kenya an old squatter once said to me: “This ain’t man’s country, it’s

God’s country.” Today it is dotted with goldmines, schools, mission stations—and where are the slow rivers of grazing herds, the human dwellings clustering like wasps’ nests on yellow and red cliffs beneath the shade of acacias, the soundless eternity of a life without history?

[1754] The author’s aim is to preserve the life of a primitive people, the Lappish Skolts in northern Finland, who have been robbed of their reindeer herds, and thus protect at least a little bit of that primeval age from irremediable disaster. May his wish be granted.

March 1949

FOREWORD TO JACOBI: “PARACELSUS: SELECTED WRITINGS”[1]

[1755] The author has asked me for some introductory’words to the English edition of her book on Paracelsus. I am more than willing to comply with this request, for Paracelsus, an almost legendary figure in our time, was a preoccupation of mine when I was trying to understand alchemy, especially its connection with natural philosophy. In the sixteenth century, alchemical speculation received a strong impetus from this master, notably from his singular doctrine of “longevity”—a theme ever dear to the alchemist’s heart.

[1756] In her book, Dr. Jacobi emphasizes the moral aspect of Paracelsus. She wisely lets the master speak for himself on crucial points, so that the reader can gain first-hand information about this strange Renaissance personality, so amply endowed with genius. The liberal use of original texts, with their vivid, imaginative language, helps to develop a striking picture of the man who exerted a powerful influence not only on his own time but on succeeding centuries.

[1757] A contradictory and controversial figure, Paracelsus cannot be brought into line with any stereotype—as Sudhoff,[2] for instance, sought to do when, arbitrarily and without a shadow of evidence, he declared that certain aberrant texts were spurious. Paracelsus remains a paradox, like his contemporary, Agrippa von Nettesheim. He is a true mirror of his century, which even at this late date presents many unsolved mysteries.

[1758] An excellent feature of Dr. Jacobi’s book is her glossary of Paracelsus’ concepts, each furnished with a succinct definition. To follow the language of this physician, this natural philosopher and mystic—a language freighted with technical terms and neologisms—is not easy for readers unfamiliar with alchemical writings.

[1759] The book abounds in pictorial material which, coming for the most part from Paracelsus’ time and from the places where he lived, rounds out and sharpens the presentation.

May 1949

FOREWORD TO KANKELEIT: “DAS UNBEWUSSTE ALS KEIMSTÄTTE DES SCHÖPFERISCHEN”[1]

[1760] Dr. Otto Kankeleit has given me the manuscript of his book and has asked me to write a foreword. It is not a scientific study of a theoretical nature, but a descriptive survey of the multitudinous phenomena and problems which beset the practising psychotherapist in his daily work. It is a kaleidoscopic assortment of images, visions, flickerings on the edge of the mind—a phantasmagoria of all the things the doctor wonders about. He finds himself confronted with a mass of problems stretching into a limitless horizon. That is the particular value of this book: it opens vistas into reaches of the psyche extending far beyond the confines of the consulting room, giving the reader a glimpse into a world hitherto unknown to him. It does not stop short at the pathological and does not apply to the sick the psychopathology of the sick. It leads beyond that to the wide realm of psychic life in general, to an abiding concern with the sick person, for the principal aim of modern medicine is not so much to eliminate the symptoms of sickness as to guide the patient back to a normal and balanced life.

[1761] Naturally this can be done only if he is given a balanced picture of the human psyche to offset his morbid and limited experience of it. For this purpose, as the author very rightly points out, it is necessary for doctor and patient to come to terms with the nature of the unconscious, since, for good or ill, they are both involved in its mysterious reality.

[1762] The book is in many respects extremely instructive for the doctor, and a very sympathetic one because of its unbiased standpoint.

Jung’s Contribution

Among the “testimonials from scholars, writers, and artists” (subtitle of Dr. Kankeleit’s book) are Jung’s answers (ibid., pp. 68f.) to the following questionnaire:

What is the respective share of the conscious and the unconscious in the creative process?

[1763] Like all psychic life the creative process stems from the unconscious. If you identify with the creative process you usually end up by imagining that you yourself are the creator.

Have you, at the onset of a new period of creativity, observed in yourself exceptional states of any kind, in which the unconscious took the lead?

[1764] Speaking for myself, I must confess that I always notice the strangest things at the onset of a new period of creativity. (I don’t doubt that there are people who never notice such things.) The unconscious takes the lead nightly in our dreams, so it is not at all surprising that it should usher in the creative process with all sorts of spontaneous phenomena.

Do you occasionally resort to stimulants of any kind (alcohol, morphine, hashish, etc.)?

[1765] Oh no! Never! A new idea is intoxicating enough.

Do you think dreams play a part in the creative process?

[1766] For years my dreams used to anticipate my creative activities as well as other things.

Have you ever experienced exceptional states of any kind (precognition, telepathy, etc.) which are not dependent on the creative process?

[1767] On closer analysis, I don’t think any exceptional states can be separated from the creative process, because life itself is creativity par excellence.

I would like very much to have a detailed description of a creative process.

[1768] I could give you a detailed description but will not do so because for me the whole thing is too mysterious. I stand in such awe of the great mysteries that I am unable to talk about them. In any case, a close study of any dream series will provide perfect examples.

FOREWORD TO SERRANO: “THE VISITS OF THE QUEEN OF SHEBA”[1]

[1769] This book is an extraordinary piece of work. It is dreams within dreams, highly poetic I should say, and most unlike the spontaneous products of the unconscious I am used to, although well-known archetypal figures are clearly discernible. The poetic genius has transformed this primordial material into almost musical shapes, just as, conversely, Schopenhauer understood music as the movement of archetypical ideas. The principal formative factor seems to be a strong aesthetic tendency. The reader is caught in an endlessly proliferating dream, in ever-expanding space and immeasurable depths of time. On the other hand the cognitive element plays no significant role—it even recedes into a misty background, yet alive with the wealth of colourful images. The unconscious or whatever we designate by this name presents itself to the author under its poetic aspect, while I envisage it chiefly under its scientific and philosophical or, to be more accurate, its religious aspect. The unconscious is surely the *Pammeter*, the Mother of All (i.e., of all psychic life), being the matrix, background, and foundation of all the differentiated phenomena we call psychic—religion, science, philosophy, art. The experience of the unconscious, whatever form it may take, is an approach to wholeness, the one experience lacking in our modern civilization. It is the *via regia* to the *Unus Mundus*.

IS THERE A TRUE BILINGUALISM?[1]

[1770] You have asked me a question which I cannot answer precisely. I would not be able to define what you understand by "bilingualism."

[1771] There are certainly people living abroad who have become so used to a new language that they not only think but even dream in the idiom of the country. I, personally, have experienced this after a rather long stay in England. I suddenly caught myself definitely thinking in English.

[1772] This has never happened to me with the French language, but I noticed that after a comparatively short stay in France my vocabulary unexpectedly increased. This was caused not so much by intense reading of French nor by conversation with French people, but was more the influence of the atmosphere—if this expression is permissible. This is a fact that has been observed quite often. But once one returns to one's country these riches generally disappear.

[1773] I am absolutely convinced that in many cases a second language can be implanted in this fashion—even at the expense of the original language. But as one's memory is not without limit, a bi- or tri-lingual state ends by damaging the scope of one's vocabulary as well as the greatest potential use of each language.

XV

THE PRACTICE OF PSYCHOTHERAPY

(related to Volume 16 of the Collected Works)

REVIEWS OF BOOKS BY HEYER

Der Organismus der Seele[1]

[1774] The author of this book has performed the grateful service of giving a comprehensive account of the chaos—one can hardly say less—that reigns in the field of psychotherapy. I know of no book that grasps the essential problems of modern therapy and its conflicting views in just this knowledgeable, unprejudiced, and wholly impartial manner. Unfortunately, most other books of the kind are written in the interests of some system and therefore suffer from that distressing theoretical narrow-mindedness which, on occasion, borders on sectarian bigotry. Many of these authors appear to have forgotten that psychology, of all the sciences, demands the most constant self-criticism. Every psychologist should realize first and foremost that his point of view is his own subjective prejudice. This particular prejudice is certainly no worse than any other, moreover it is extremely likely to be a fundamental assumption with many other people as well. Hence it is generally worth while pursuing one's point of view as far as possible. It will doubtless bear fruit that have a certain usefulness. But under no circumstances should one indulge in the unscientific delusion that one's own subjective prejudice represents a universal and fundamental psychological truth. No true science can spring from this, only a faith whose shadow is intolerance and fantacism. Contradictory views are necessary for the evolution of any science; they must not be set up in opposition to each other, but should seek the earliest possible synthesis. Books like Heyer's have long been wanting. They are absolutely indispensable if we are ever to create an objective psychology, which can never be the work of a single individual but only the result of the concerted labours of many. Heyer's book offers a conspectus of the main contemporary doctrines of Freud, Adler, and myself. Separate accounts of these may be known to the reader, but until now they have not, as a rule, been related to one another, so that each formed a closed system. Heyer's book thus fills a long-felt need. It is written in a lively style and is richly interspersed with the author’s own practical experiences—perhaps the most commendable book I know on this subject.

Praktische Seelenheilkunde[2]

[1775] One is often tempted to think that it was a fatal error of medical psychology in the days of its infancy to suppose that the neuroses were quite simple things which could be explained by a single hypothesis. This optimism was probably inevitable; had it been otherwise, perhaps nobody would have plucked up courage to venture any theory about the psyche at all. The difficulties and complications that beset the psychology of neuroses are nowhere more apparent than in the great variety of possible methods of treatment. There are so many of them that the layman in psychiatry may easily be driven to despair when it comes to choosing the method which suits not only the neurosis to be treated but the doctor treating it. We are familiar enough, nowadays, with the idea that physical illnesses derive from all sorts of causes and are subject to all sorts of conditions and therefore generally need treating from various angles; but it is still taken too much for granted that, among all these physical illnesses, a neurosis is just another illness or, at best, another category of illness. The reason for this prejudice is that modern medicine has only recently discovered the “psychological factor” in illness, and now clings to the idea that this “factor” is a simple quantity, one of the many conditioning factors or causes of physical disease. The psyche is thus vested with the kind of reality we concede to a toxin, a bacillus, or a cancer cell; but we are altogether disinclined to attribute to the psyche anything like the real existence with which we unthinkingly endow the body.

[1776] In this book, Heyer again presents us, as he did with such signal success in his earlier work *Organismus der Seele*, with a synoptic view, not of theories this time, but of the practical methods of treatment. He offers a survey, richly documented with case histories, of all the techniques which the psychotherapist requires for his everyday medical work and which are therefore also of great interest to the general practitioner. The latter regards his neurotic patients as being physically ill, like the other patients who are suffering from predominantly physical disturbances. Illnesses that are psychogenic in origin are naturally, to his way of thinking, physical, and so his first thought will be of a physical cure. The attitude of the orthodox psychotherapist who makes a sharp cut between neurosis and the pathology of the body is foreign to him. But neuroses, too, are unorthodox things and do not always prove resistant to physical treatment. The truth is that some neuroses are predominantly physical and others predominantly psychological. And often it is a diagnostic feat to make out to which category a particular case belongs. Thus psychotherapy is inevitably, at least for the time being, a curious mixture of psychological and physiological therapeutics. On all this Heyer's book provides a wealth of information that should be of the greatest value to the psychotherapist as well as to the general practitioner and the medical student.

[1777] It is sometimes said that when many remedies are prescribed for a certain disease, none of them can claim to be particularly efficacious. The multitude of views in psychotherapy does not, however, arise from this source of confusion, but rather from the fact that neurosis is not so much *one* disease as an amalgam of several diseases which require an equal number of remedies. It is exceedingly probable that the psyche is analogous to the body and is capable of having as many diseases. The future has still to discover a pathology of the psyche to match that of the body. That modest "psychological factor" will, in time, broaden out and cover a field of medical experience no whit inferior to that of the body in scope and significance. Hence we would do well to infer, from the diversity of psychotherapeutic methods, a corresponding diversity of psychopathological states. Every one of the types of treatment mentioned corresponds, up to a point, to one aspect of the so-called "neurosis"—in other words, to a genuine form of sickness. But our present knowledge of psychopathology is not yet sufficiently advanced for us to specify without a doubt what particular form of psychic sickness calls for what treatment. We are still in the position of the physicians in the Middle Ages who, lacking the requisite knowledge of anatomy, physiology, and pathological anatomy, were solely dependent on practical experience, intuition, and the *physician's art*. They were not necessarily bad doctors for that, any more than primitive medicine-men are bad doctors. It is precisely through the various kinds of treatment, their successes and failures, that we shall get to know the various kinds of psychic pathology, psychic biology, and psychic structure.

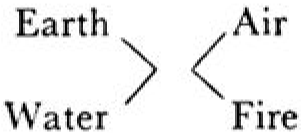
[1778] Heyer's book is an important milestone on the road to the discovery of the diseases of the psyche and their specific remedies. It is written from practical experience and will be particularly valuable to the general practitioner. In its arrangement it relies on clinical pictures of illness; thus Chapter II deals with disturbances in the respiratory and circulatory systems, Chapter III with digestive disturbances, Chapter IX with sexual disturbances, and Chaper X with insomnia. Chapters I, IV, and V form an introduction to psychology. Three chapters deal with the various kinds of therapy. The book is equipped with a very readable appendix by Lucy Heyer, giving an account of the physical aids to psychotherapy, such as gymnastics, breathing, massage, etc.

[1779] I regret the absence of a similar account dealing with the artistic and spiritual remedies, for in practice these play no small part along with the purely physical ones. Maldevelopment and inhibitedness exist in the psyche as well as in the body and are in just as much need of exercise and reeducation.

ON THE “ROSARIUM PHILOSOPHORUM”[1]

[1780] The *Rosarium* is one of the first, if not *the* first, synoptic texts covering the whole field of alchemy. It may have originated about 1350. The author is anonymous. It has been attributed to Peter of Toledo, who is supposed to have been an older brother of the famous Arnaldus de Villanova (1235–1313). Certain parts of it may date back to the former, but not the whole text, which was first printed in 1550 and contains numerous quotations from Arnaldus. The 1550 edition is a compilation consisting of two different parts, each a separate treatise. There are also interpolations of some length from various authors, for instance a letter of Raymundus Lullius to Rupertum Regem Franciae. (This Rupertus may be identical with Robert I, the Wise, 1309–1343.)

[1781] The text begins with a kind of preface or introduction in which the author discusses the “art” in general terms. He emphasizes that the art operates only “within Nature.” Only *one* thing is needed for the procedure, and not several things. Operating “outside Nature” leads nowhere. The author stresses that the laborant must have a sound mental disposition. The art consists in *uniting the opposites,* which are represented as male and female, form and matter. In addition the *4 roots* (radices, rhizomata, elements) are needed. The *prima materia* (initial material) is found everywhere. It is also called *lapis* = stone, or “salt” or “water.” The water (*aqua permaens*) is identical with *argentum vivum* (quicksilver). The elements are likewise represented as pairs of opposites:



The author warns against taking the terminology *literally;* only fools would do this.

[1782] In the preface we find the following verses:

Hic lapis exilis extat, precio quoque vilis,

Spernitur a stultis, amatur plus ab edoctis.
(Here stands the mean, uncomely stone,
’Tis very cheap in price!
The more it is despised by fools,
The more loved by the wise.)[2]

[1783] The “lapis exilis” may correspond to the “lapsit exillis,” Wolfram von Eschenbach’s name for the Grail.[3]

[1784] The text proper opens with a pictorial representation of the alchemical process:[4] a fountain from which the *aqua permanens* flows out of three pipes in the form of *lac virginis* (virgin’s milk), *acetum fontis* (vinegar of the fount), and *aqua vitae* (water of life). Above the fountain is a star, with the sun to the left and the moon to the right (as opposites). Surmounting the star is the two-headed Mercurial Serpent, symbolizing the contamination of opposites in the unconscious. The picture is flanked by two columns of cloud or smoke, an indication of the “spiritual” (volatile) nature of the process. In the corners are four stars, alluding to the quaternity of the elements. The three springs form the *material Trinity* (the spirit of God, brooding over the chaos, penetrated into matter and became water). Together with inert matter (earth) they constitute the unity which is indicated by the quaternity of the elements (3 + 1 = 4).

[1785] For some alchemists the *prima materia* is something that can be found everywhere, for others it has first to be produced out of the “imperfect body” or substance. The contradiction resolves itself when one takes account of the amply documented theory of the *humidum radicale:* all chemical substances contain, in greater or lesser degree, the moisture, the water of the beginning that was brooded over by the spirit of God. This water was the *prima materia*. The opening words of the first chapter can thus be understood without difficulty:

> The imperfect body has been changed into the *prima materia*, and this water, combined with our water (*aqua permanens*), produces *one* pure, clear water (solvent) that purifies everything and contains within itself everything needful (i.e., for the process of self-transformation).… Out of this water and with this water our procedure is brought to completion. But it dissolves the bodies not by means of the common solvent (*solutione vulgari*), as transmitted by the ignorant who transform the

body into rain-water, but by means of the true philosophical solvent in which the body is transformed into the original water whence it arose in the beginning. This same water reduces the bodies themselves to ashes. You must know that the art of alchemy is a gift of the Holy Spirit.

[1786] The dissolution of the imperfect body transforms it back into the watery initial state, i.e., into the *prima materia*. The *aqua nostra* (our water), as is evident from the text and from numerous other sources, is also *fire*, the baptismal water, and at the same time the Holy Spirit this contains. *Aqua nostra* is therefore a "spirit water," which is united with the *prima materia* in the same way as the spirit of God brooded over the water of the beginning and from it created the world.

[1787] The process of creation is performed outwardly through a chemical operation and inwardly through *active imagination:* "And imagine this with the true and not with the fantastic imagination," the text enjoins.[5] Matter was thought of as entirely passive; everything creative and active proceeded from the mind. *Aqua nostra* as "spirit water" was a chemical body endowed with spirit, which was produced by the art; it was named the "tincture" or "quintessence." Medieval man thought in terms of spirit, whereas we always start with matter. We can understand how matter alters mind, but cannot see how mind can transform matter, although logically there is a reciprocal relationship between the two processes.

[1788] The second chapter is concerned mainly with the secret of the *aqua nostra*. This water, as we have said, is the *humidum radicale*, a *spirituale corpus* also named *sapo sapientum* ("soap of the wise," a play on words). It is so named in *Clavis sapientiae* of Alfonso X, king of Castile, who reigned 1252–1284. His treatise is said to be a translation from the Arabic. The *humidum radicale* is identical with the *serpens mercurialis*, the dragon, hence is also named "dragon's blood." The body to be transformed must be dissolved in its own liquid, its "blood"; this tincture, the elixir or *lapis*, is identical with *aqua nostra*. The texts are very confused on this point. But the confusion is not so bad if one bears in mind that the "water" is either extracted by sublimation from a body that contains a particularly large amount of it, or that the elixir already extracted is used for dissolving the body. The texts deal sometimes with the one and sometimes with the other, or more generally with both at once, as does the *Rosarium*. Other synonyms for the water are *pinguedo* (fat), *unctuositas, vapor unctuosus* (fatty vapour).

[1789] These basic ideas are developed and embroidered on in the following chapters, particularly the idea of the *coniunctio*. By this is meant the reunion of the imperfect body with its soul (*anima*), of which it had been deprived.[6] Here the *anima* (= *humidum radicale*) serves as a vehicle for the spirit, which through active imagination permeates the watery solution. Usually the spirit is active and male, the material body passive and female. (Occasionally it is the other way round!) The male is red (red tincture, red slave, sun, red rose), the female white (white tincture, white spouse, moon, lily, white rose). The myth of Gabricus and Beya is the model for the *coniunctio* symbolism,[7] one of the commonest and most impressive motifs in alchemy. It is concerned with the problem of opposites projected into matter, with the union of opposites for the purpose of producing a third thing, the Hermaphroditus or Rebis ("consisting of two"),[8] or the "living" Stone of the Wise. This symbol is something that originates in man, like a child, and continues to exist in him, as an ancient treatise, probably of Arabic origin and attributed to Rosinus (Zosimos), says. ("Rosinus ad Sarratantam," *Artis auriferae*, II, 1593, p. 311.) The stone has the significance of a panacea, of a drink of immortality, of a redeemer in general, and hence is an *allegoria Christi*.

PREFACE TO AN INDIAN JOURNAL OF PSYCHOTHERAPY[1]

[1790] Dr. Bannerjee has kindly asked me to write a foreword to the special number of this journal devoted to my psychological work. It is a great pleasure to express my appreciation of the attentive interest given to my modest attempts at furthering the development of psychological understanding in general and the deepening of insight into the workings of the unconscious. India with her highly differentiated spiritual culture enjoys certain advantages over the European mind, inasmuch as the latter, owing to its origin in ancient Greek culture, is more handicapped by its dependence upon the sensory aspects of the external world. We expect of India and her spiritual attitude a unique contribution—an introspection originating in a different point of view which would compensate the one-sidedness of the European outlook. We look forward hopefully to a collaboration with the Indian mind, knowing that the mystery of the psyche can be understood only when approached from opposite sides.

[1791] I believe that the coming age will be in desperate need of a common basic understanding of man, which would enable mankind to become a brotherhood rather than a chaos of power-driven usurpers.

ON PICTURES IN PSYCHIATRIC DIAGNOSIS[1]

[1792] The case that you lay before me presents every ground for thinking of latent schizophrenia. This diagnosis is confirmed by the pictures. There is a distinct tendency to translate living reality into abstractions in order to cut off the emotional rapport with the object. This forces the ego into an unsuitable power stance with the sole aim of domination. His (the artist's) commentary is very enlightening in this respect. Under these conditions there naturally can be no point in looking for symbols of the self,[2] since there is an overwhelming tendency to push the ego into the foreground and suppress the self. The ego is an arbitrary fragment, and the self the unwanted whole. No trace of the latter can be seen in the pictures.

XVI

THE DEVELOPMENT OF PERSONALITY

(related to Volume 17 of the Collected Works)

FOREWORD TO EVANS: “THE PROBLEM OF THE NERVOUS CHILD”[1]

[1793] I have read the manuscript of Mrs. Evans’ book, *The Problem of the Nervous Child,* with great pleasure and interest. Mrs. Evans’ knowledge of her subject-matter is based on a solid foundation of practical experience, an experience gained in the difficult and toilsome treatment and education of nervous children. Whoever has had to deal with nervous children knows what an amount of patience, as well as skill, is needed to guide a child out of a wrong pathological attitude into a normal life. This book, as the reader can see on almost every page, is the fruit of extensive work in the field of neuroses and abnormal characters. Despite the fact that there are numerous books on education, there are very few that concern themselves with a child’s most intimate problems in such a careful and painstaking way. It is self-evident that this contribution will be of great value to anyone interested in educational questions. The physician should be particularly indebted to the author, as her book will be a valuable ally in the fight against the widespread evil of neuroses in adults. More and more the neurologist of today realizes that the origin of the nervousness of his patients is very rarely of recent date, but goes back to the early impressions and developments in childhood. There lies the source of many later nervous diseases. Most of the neuroses originate from a wrong psychological attitude which hinders adjustment to the environment or to the individual’s own requirements. This wrong psychological position which is at the bottom of almost every neurosis has, as a rule, been built up during the course of the years and very often began in early childhood as a consequence of incompatible familial influences. Knowing this, Mrs. Evans lays much stress on the parent’s mental attitude and its importance for the child’s psychology. One easily overlooks the enormous power of imitation in children. Parents too easily content themselves with the belief that a thing hidden from the child cannot influence it. They forget that infantile imitation is less concerned with action than with the parent’s state of mind from which the action emanates. I have frequently observed children who were particularly influenced by certain unconscious tendencies of the parents, and, in such cases, I have often advised the treatment of the mother rather than of the child. Through the enlightenment of the parents, their wrong influences can at least be avoided, and thus much can be done for the prevention of later neuroses in the children.

[1794] The author particularly insists upon the importance of watching the manifestations of the sexual instinct in childhood. Anyone concerned with the education of abnormal children will confirm the existence and the frequency of sexual symptoms in these children. Despite the fact that sexual activity does not belong to the infantile period, it frequently manifests itself in a symptomatic way, as a symptom of abnormal development. An abnormal development does not provide sufficient opportunity for the normal display of the child’s energies. Thus, the normal outlet being blocked, the energy accumulates and forcibly seeks an abnormal outlet in premature and perverted sexual interests and activities. Infantile sexuality is the most frequent symptom of a morbid psychological attitude. In my view, it is wrong to consider sexual phenomena in early childhood as the expression of an organic disposition; most of the cases are due to an environment unsuited to the child’s psychological nature. The attitude of the child towards life is certainly determined by the inherited disposition, but only to a certain extent; on the other side it is the result of the immediate parental influences and of education. While the inherited disposition cannot be changed, these latter influences can be improved by suitable methods, and thus the original unfavourable disposition can be overcome. Mrs. Evans’ book shows the way, and how to treat even the most intricate cases.

October 1919

FOREWORD TO HARDING: "THE WAY OF ALL WOMEN"[1]

[1795] It is a pleasure to comply with the author's wish that I should write an introduction to her book. I have read her work with the greatest interest, and am gratified to find that it does not come into the category of those sententious books, bristling with prejudices, which expatiate on the psychology of women with gushing eloquence, and finally overflow in a sentimental hymn to "holy motherhood." Such books have another unpleasant characteristic: they never speak of things as they are, but only as they should be, and instead of taking the problem of the feminine psyche seriously, they conveniently gloss over all the dark and disagreeable truths with advice that is as ineffectual as it is patently good. Such books are not always written by men—if they were they might be excusable—but many are written by women who seem to know as little about feminine feelings as men do.

[1796] It is a foregone conclusion among the initiated that men understand nothing of women's psychology as it actually is, but it is astonishing to find that women know nothing of themselves either. However, we are only surprised as long as we naïvely and optimistically imagine that mankind understands anything fundamental about the psyche. This is indeed one of the most difficult tasks the investigating mind can set itself. The latest developments in psychology show with ever-increasing clarity not only that there are no simple formulas from which the world of the psyche might be derived, but that we have never yet succeeded in defining the field of psychic experience with sufficient exactitude. Despite the immense surface area, scientific psychology has not even begun to break down the mountain of prejudices that persistently block the way to the psyche as it really is. Psychology is the youngest of the sciences and is suffering from all those childhood ailments which afflicted the adolescence of other sciences in the late Middle Ages. There still exist psychologies which limit the field of psychic experience to the consciousness and its contents, or understand the psyche as a purely reactive phenomenon without any trace of autonomy. The fact of an unconscious psyche has not yet gained undisputed acceptance, despite an overwhelming mass of empirical material which proves beyond all doubt that there can be no psychology of consciousness without a recognition of the unconscious. Lacking this foundation, it is impossible to deal with a psychological datum that is in any way complex, and the actual psyche we have to deal with in real life is complexity itself. Consequently, a psychology of woman cannot be written without an adequate knowledge of the unconscious background of the mind.

[1797] Drawing on her rich psychotherapeutic experience, Dr. Harding has sketched a picture of the feminine psyche which, in scope and thoroughness, far surpasses previous works in this field. Her presentation is refreshingly free from prejudice and remarkable for the love of truth it displays. Her arguments never lose themselves in dead theories and fanatical fads, which unfortunately are so frequently met with in this field of work, and she has succeeded in penetrating with the light of knowledge into crannies and depths where before darkness prevailed. Only one half of feminine psychology can be grasped with the aid of biological and social concepts, and in this book it becomes clear that woman possesses a peculiar spirituality very strange to man, to which Dr. Harding has devoted a special chapter. Without a knowledge of the unconscious this new aspect, so essential for an understanding of the psychology of woman, could never have been brought out with such clarity and completeness. The fructifying influence of the psychology of the unconscious is also evident in many other places in the book.

[1798] At a time when the divorce rate has broken all records, when the relation of the sexes has become a perplexing problem, a book like this seems to me of the greatest help. To be sure, it does not provide the one thing everybody expects—a generally acceptable recipe for solving this dreadful tangle of questions in a simple and practical way, so that we need rack our brains about it no longer. On the other hand, the book contains an ample store of what we actually need very badly, and that is understanding—understanding of psychic facts and conditions with the help of which we can orient ourselves in the complicated situations of life.

[1799] Why after all do we have a psychology? Why is it that we are especially interested in psychology just now? The answer is that everyone is in desperate need of it. Humanity seems to have reached a point where the concepts of the past are no longer adequate, and we begin to realize that our nearest and dearest are actually strangers to us, whose language we no longer understand. It is beginning to dawn on us that the people living on the other side of the mountain are not made up exclusively of red-headed devils who are responsible for all the evil on this side of the mountain. A little of this uneasy suspicion has filtered through into the relations between sexes; not everyone is utterly convinced that everything good is in “me” and everything evil in “you.” Already we can find super-moderns who ask themselves in all seriousness whether there may not be something wrong with us, whether perhaps we are too unconscious, too antiquated, and whether this may not be the reason why when confronted with difficulties in sexual relationships we still continue to employ with disastrous results the methods of the Middle Ages if not those of the caveman. There are indeed people who have read with horror the Pope’s Encyclical on Christian marriage,[2] and yet must admit that for cavemen our so-called “Christian” marriage is a cultural step forward. Although we are still far from having overcome our prehistoric mentality, which enjoys its most signal triumphs just in the sphere of sex, where man is made most vividly aware of his mammalian nature, certain ethical refinements have nevertheless crept in which permit anyone with ten to fifteen centuries of Christian education behind him to progress towards a slightly higher level.

[1800] On this level the spirit—from the biological point of view an incomprehensible psychic phenomenon—plays a not unimportant role psychologically. It had a weighty word to say on the subject of Christian marriage, and it still participates vigorously in the discussion whenever marriage is doubted and depreciated. It appears in a negative capacity as counsel for the instincts, and in a positive one as the defender of human dignity. Small wonder, then, that a wild and confusing conflict breaks out between man as an instinctual creature of nature and man as a spiritual and cultural being. The worst thing about it is that the one is forever trying violently to suppress the other in order to bring about a so-called harmonious solution of the conflict. Unfortunately, too many people still believe in this procedure, which is all-powered in politics; there are only a few here and there who condemn it as barbaric and would like to set up in its place a just compromise whereby each side of man's nature is given a hearing.

[1801] But unhappily, in the problem between the sexes, no one can bring about a compromise by himself alone; it can only be achieved in relation to the other sex. Hence the need for psychology! On this level, psychology becomes a kind of special pleading—or rather, a *method of relationship*. It guarantees real knowledge of the other sex instead of arbitrary opinions, which are the source of the incurable misunderstandings now undermining in increasing numbers the marriages of our time.

[1802] As a weighty contribution to this striving for a deeper knowledge of human nature and for a clarification of the confusion in the relations between the sexes, Dr. Harding's book is heartily to be welcomed.

February 1932

DEPTH PSYCHOLOGY AND SELF-KNOWLEDGE[1]

Is depth psychology a new way to self-knowledge?

[1803] Yes, depth psychology must be termed a new way, because in all the methods practised up to now no account was taken of the existence of the unconscious. Thus a new factor entered our field of vision, which has seriously complicated and fundamentally altered the situation. Formerly, the fact had not been reckoned with that man is a "twofold" being—a being with a conscious side which he knows, and an unconscious side of which he knows nothing but which need be no secret to his fellows. How often one makes all sorts of mistakes without being conscious of them in the least, while they are borne in upon others all the more painfully! Man lives as a creature whose one hand doesn't know what the other is doing. The recognition that we have to allow for the existence of an unconscious is a fact of revolutionary importance. Conscience as an ethical authority extends only as far as consciousness extends. When a man lacks self-knowledge he can do the most astonishing or terrible things without calling himself to account and without ever suspecting what he is doing. Unconscious actions are always taken for granted and are therefore not critically evaluated. One is then surprised at the incomprehensible reactions of one's neighbours, whom one holds to be responsible; that is, one fails to see what one does oneself and seeks in others the cause of all the consequences that follow from one's own actions.

[1804] Marriages furnish an instructive example of how easily one sees the mote in another's eye but not the beam in one's own. Of far greater, indeed truly monstrous, proportions are the projections of war propaganda, when the lamentably bad manners of civil life are exalted into a principle. Our unwillingness to see our own faults and the projection of them on to others is the source of most quarrels, and the strongest guarantee that injustice, animosity, and persecution will not easily die out. When one remains unconscious of oneself one is frequently unaware of one's own conflicts; indeed the existence of unconscious conflicts is actually held to be impossible. There are many marriages in which the partners skirt round every possible conflict with the greatest caution, the one actually imagining himself to be immune from such things, while the other is filled to the neck with laboriously repressed complexes and almost choked by them. Such a situation often has injurious effects on the children too. We know that children often have dreams dealing with the unconfessed problems of their parents. These problems weigh upon the children because the parents, being themselves unconscious of them, have never attempted to come to grips with their own difficulties, and this creates something like a poisoning of the atmosphere. For this reason the neuroses of childhood depend to a considerable degree upon the parents' conflicts.

How is depth psychology distinguished from the previous methods of psychological research? Where does it coalesce with other disciplines?

[1805] Psychology up till now took no account of the motivation of conscious contents due to the existence of the unconscious. Once the unconscious is included in the calculation, everything suddenly gets a double bottom, as it were. We have to look at everything from two sides, whereas the old psychology was satisfied with the contents of consciousness. Thus the old method of explaining the appearance of psychogenic (psychologically caused) symptoms could rest content with the supposition that they were auto-suggested figments of the imagination. The modern explanation, which lets the unconscious psyche of the patient have its say, investigates his dreams, fantasies, and complexes, i.e., that segment of his life-history which is responsible for the formation of the symptoms. No one questions today that neurotic symptoms are produced by processes in the unconscious. The conscious realization of the unconscious causative factors therefore has a definite therapeutic value. Psychogenic symptoms are products of the unconscious. These symptom also include various opinions and convictions which, though they may be uttered consciously enough, nevertheless are determined in reality by unconscious motives. Thus a too importunate and one-sided assertion of principles can often be traced back to an unconscious failure to live up to them. I knew someone, for instance, who, on every occasion, suitable or not, paraded his principle of honesty and truthfulness before the public. As I soon discovered, he suffered from a rather too lively imagination, which now and then seduced him into gross lies. The whole question of truth therefore occasioned in him a not undeserved "sentiment d'incomplétude," which in turn moved him to exceptionally loud ethical protestations, no small part of whose aim was to beget in himself a conviction of honesty.

[1806] With the recognition that every conscious process rests in part upon an unconscious one and may represent it symbolically, our previous views of psychic causality are radically called into question. Direct causal sequences in consciousness appear doubtful, and every experience of psychic contents urgently requires them to be supplemented by their unconscious aspect. Although depth psychology is a discipline in itself, it lurks invisibly, thanks to the fact of the unconscious, in the background of all other disciplines. Just as the discovery of radioactivity overthrew the old physics and necessitated a revision of many scientific concepts, so all disciplines that are in any way concerned with the realm of the psychic are broadened out and at the same time remoulded by depth psychology. It raises new problems for philosophy; it greatly enriches pedagogics and still more the study of human character; it also poses new problems for criminology, especially as regards criminal motives; for medicine it opens up an unsuspected store of fresh insights and possibilities through the discovery of the interdependence of bodily and psychic processes and the inclusion of the neurotic factor; and it has richly fecundated, less closely related sciences such as mythology, ethnology, etc.

Are the various schools of depth psychology similar in their aims?

[1807] The difference between the principal schools of depth psychology up to date are based upon as many different aspects of the unconscious. The unconscious possesses a biological, a physiological, a mythical, a religious aspect, and so on. This means that the most varied conceptions are not only possible but even necessary. Each has its own justification, though none to the exclusion of others, for the unconscious is a highly complex phenomenon to which one single concept can never do justice. One cannot judge a person from a moral standpoint *only*, for example, but has to regard him from this standpoint *too!* Certain contents of the unconscious can be understood as strivings for power, others as the expression of sexual or other drives, while yet others allow no explanation in terms of biological drives under any circumstances.

Has "analytical psychology," i.e., the Jungian school of depth psychology, definite guiding principles?

[1808] I should prefer not to use the term "guiding principles" in this connection. Just because of the extreme variety and complexity of the aspects of the unconscious and its possible meanings, every "guiding principle" works as an arbitrary assumption, as an actual prejudice that tries to anticipate its irrational manifestations, though these cannot be determined in advance, and perhaps force them into an unsuitable mould. One must avoid all assumptions so far as possible in order to grasp the pure manifestation itself. This must carry its own interpretation with it, to such an extent that its significance is immediately evident from the nature of the phenomenon and is not forced upon it by the observer. He must, in fact, accustom himself to be guided more by the material than by his own opinions, however well founded they may appear to him. Every item of psychic experience presents itself in an individual form, even though its deeper content may be collective. One can never determine in advance, however, which of its principal aspects lies concealed behind the individual form. "Guiding principles" are therefore admissible at most as working hypotheses, and this only in the realm of scientific research. The practical material is best accepted *mente vacua* (without any preconceived theories).

What are the principal tools of analytical psychology? Does the interpretation of dreams occupy a central place?

[1809] The analytical situation has a fourfold aspect: (*a*) The patient gives me in his own words a picture of the situation as he consciously sees it. (*b*) His dreams give me a compensating picture of the unconscious aspect of it. (*c*) The relational situation in which the patient is placed vis-à-vis the analyst adds an objective side to the two other subjective ones, (*d*) Working through the material collected under *a, b,* and *c* fills out the total picture of the psychological situation. The necessity of working through it arises from the fact that the total picture often stands in the liveliest contrast to the views of the ego-personality and therefore leads to all sorts of intellectual and emotional reactions and problems, which in their turn clamour for solution and answer. Since the final goal of the undertaking can only consist in restoring the original wholeness of the personality in a viable form, one cannot dispense with a knowledge of the unconscious. The purest product of the unconscious is the dream. The dream points directly to the unconscious, for it "happens" and we have not invented it. It brings us unfalsified material. What has passed through consciousness is already sifted and remodelled. As we can deduce from the lava ejected by a volcano the constitution of the strata from which it comes, so we can draw deductions as to the unconscious situation from the contents of dreams. Only dream material plus conscious material reveals the picture of the *whole* man. And only in this way can we find out who our antagonist is.

[1810] Although dreams disclose the unconscious to us with perhaps the nearest approach to faithfulness we can attain, we also come upon its traces in every form of creative activity, such as music and poetry, and in all other forms of art. It appears in all manifestations of a spontaneous and creative kind, the further these are removed from everything mechanical, technical, and intellectual. As well as from dreams we can therefore draw conclusions from such things as drawings in which patients are encouraged to reveal their inner images. Although obviously the personality of the patient holds the centre of our attention, and introspection is an indispensable instrument of our work in common, yet this is anything rather than *brooding*. Brooding is a sterile activity which runs round in a circle and never reaches a reasonable goal. It is not *work* but a weakness, even a vice. On the other hand, if you feel out of sorts, you can legitimately make yourself an object of serious investigation, just as you can earnestly search your conscience without lapsing into moral weakness. Anyone who is in bad odour with himself and feels in need of improvement, anyone who in brief wishes to "grow," must take counsel with himself. Unless you change yourself inwardly too, outward changes in the situation are worthless or even harmful. It is not enough to jump up, puff yourself out, and shout: "I take the responsibility!" Not only mankind but fate itself would like to know *who* promises to take this weighty step and whether it is someone who *can* take the responsibility. We all know that anyone can *say* so. It is not the position that makes the man, but the man who does his work. Therefore self-searching, with the help of one or more persons, is—or rather should be—the essential condition for taking on a higher responsibility, even if it is only that of realizing the meaning of individual life in the best possible form and to the fullest possible degree. Nature always does that, but *without responsibility*, for this is the fated and divinely allotted task of man.

Is not an important milestone in the development of self-knowledge, which has increased the difficulties of the "way to onself," to be found in the Reformation and in the loss of confession for Protestants, and so for millions of people? Has not self-searching become keener and deeper because of the loss of the dialogue that the Catholic has with his confessor, and the loss of absolution?

[1811] The difficulties have indeed become enormously greater, as evidenced by the increased prevalence of complexes among Protestants, which has been statistically established. But these increased difficulties constitute—if the Protestant will really face and grapple with them—an exceptionally advantageous basis for self-knowledge. They can, however, just as easily lead, precisely because a confessor is lacking, either to sterile brooding or to thoughtless superficiality. Most people need someone to confess to, otherwise the basis of experience is not sufficiently real. They do not "hear" themselves, cannot contrast themselves with something different, and thus they have no outside "control." Everything flows inwards and is answered only by oneself, not by another, someone different. It makes an enormous difference whether I confess my guilt only to myself or to another person. This being thrown back upon themselves often leads Protestants to spiritual arrogance and to isolation in their own ego. Although analytical psychology guards against being considered a substitute for confession, in practice it must often function willy-nilly as such. There are so many Catholics who no longer go to confession, and still more Protestants who do not even know what confession is, that it is not surprising some of them yield to their need of communication and share their burdens with an analyst in a way which could almost be called confession. The difference, however, is considerable, inasmuch as the doctor is no priest, no theological and moral authority, but, at best, a sympathetically listening confidant with some experience of life and knowledge of human nature. There is no admonition to repentance unless the patient does it himself, no penance unless—as is almost the rule—he has got himself in a thorough mess, and no absolution unless God has mercy on him. Psychology is admittedly only a makeshift, but at the present time a necessary one. Were it not a necessity it would have collapsed long ago from inner emptiness. It meets a need that unquestionably exists.

Does a knowledge of the "other side," that is, one's own unconscious side, bring relief, release? Does not self-knowledge rather increase the tension between what one is and what one would like to be?

[1812] Being able to talk things over freely can in itself be a great relief. In general, working with the unconscious brings an increase of tension at first, because it activates the opposites in the psyche by making them conscious. This entirely depends, though, on the situation from which one starts. The carefree optimist falls into a depression because he has now become conscious of the situation he is in. On the other hand, the pressure on the inward brooding person is released. The initial situation decides whether a release or increase of pressure will result. Through self-searching in analysis people suddenly become aware of their real limitations. How often a woman has previously felt herself a snow-white dove and had no suspicion of the devil concealed within her! Without this knowledge she can neither be healed nor attain wholeness. For one person deeper knowledge of himself is a punishment, for another a blessing. In general, every act of conscious realization means a tensing of opposites. It is in order to avoid this tension that people repress their conflicts. But if they become conscious of them, they get into a corresponding state of tension. This supplies in turn the driving power for a solution of the problems they are faced with.

Doesn't a systematic preoccupation with oneself lead to egocentricity?

[1813] At first glance, from an external and superficial point of view, it does make one egocentric. But I consider this justifiable up a point. One *must* occupy oneself with oneself; otherwise one does not grow, otherwise one can never develop! One must plant a garden and give it increasing attention and care if one wants vegetables; otherwise only weeds flourish. “Egocentric” has an unpleasant undertone of pathological egoism. But as I have said, occupation with and meditation on one’s own being is an absolutely legitimate, even necessary activity if one strives after a real alteration and improvement of the situation. Outwardly changing the situation, doing something else, forgetting what one was, alters nothing essential. Indeed, even when a bad man does good, he is nevertheless not good but suffers from a good symptom without being altered in character. How many drinkers, for example, have turned teetotalers without being freed from their psychic alcoholism! And only too soon they succumbed again to their vice. There are essentially bad natures that actually specialize in being good and, if they chance to become some kind of educator, the results are catastrophic. A *systematic* preoccupation with oneself serves a purpose. It is work and achievement. Often, in fact, it is much better to educate oneself first before one educates others. It is by no means certain that the man with good intentions is under all circumstances a good man. If he is not, then his best intentions will lead to ruin as daily experience proves.

Doesn’t an exact knowledge of one’s own nature with all its contradictions and absurdities, make one unsure? Doesn’t it weaken selfconfidence and so lessen the ability to survive in the battle of life?

[1814] Much too often people have a pathetic cocksureness which leads them into nothing but foolishness. It is better to be unsure because one then becomes more modest, more humble. It is true that an inferiority complex always harbours within it the danger of outdoing itself and compensating the supposed lack by a flight into the opposite. Wherever an inferiority complex exists, there is good reason for it. There actually is an inferiority of some kind, though not precisely where one is persuaded it is. Modesty and humility are not the signs of an inferiority complex. They are highly estimable, indeed admirable, virtues and not complexes. They prove that their fortunate possessor is not a presumptuous fool, but knows his own limitations, and will therefore never stumble beyond the bounds of humanity, dazzled and intoxicated by his imagined greatness.

The people who fancy they are sure of themselves are the ones who are truly unsure. Our life is unsure, and therefore a feeling of unsureness is much nearer to the truth than the illusion and the bluff of sureness. In the long run it is the better-adapted man who triumphs, not the wrongly self-confident, who is at the mercy of dangers from without and within. Measure not by money or power! Peace of soul means more.

Can depth psychology assist social adaptation and increase the capacity for human contacts?

[1815] The increased self-knowledge which depth psychology necessitates also creates greater possibilities of communication: you can interpret yourself in the analytical dialogue and learn through selfknowledge to understand others. In that way you become more just and more tolerant. Above all, you can remedy your own mistakes, and this is probably the best chance of making a proper adaptation to society. Naturally you can also make wrong use of self-knowledge, just as any other knowledge.

Has self-knowledge a healing, liberating effect?

[1816] Repentance, confession, and purification from sin have always been the conditions of salvation. So far as analysis helps confession, it can be said to bring about a kind of renewal. Again and again we find that patients dream of the analysis as of a refreshing and purifying bath, or their dreams and visions present symbols of rebirth, which show unmistakably that knowledge of their unconscious and its meaningful integration in their psychic life give them renewed vitality, and do indeed appear to them as a deliverance from otherwise unavoidable disaster or from entanglement in the skeins of fate.

How does the integration of the unconscious express itself in the actual psychic situation?

[1817] This question can be answered only in a very general sense. Individuality is so varied that in each single case the integration of the unconscious takes place in a different and unforeseen way. One could describe this only with the help of concrete examples. The human personality is incomplete so long as we take simply the ego, the conscious, into account. It becomes complete only when supplemented by the unconscious. Therefore knowledge of the unconscious is indispensable for every true self-investigation. Through its integration, the centre of the personality is displaced from the limited ego into the more comprehensive self, into that centre which embraces both realms, the conscious and the unconscious, and unites them with each other. This self is the mid-point about which the true personality turns. It has therefore been since remotest times the goal of every method of development based upon the principle of self-knowledge, as, for example, Indian yoga proves. From the Indian standpoint our psychology looks like a “dialectical” yoga. I must remark, however, that the yogi has quite definite notions as to the goal to be reached and does everything to attain this postulated goal. With us, intellectualism, rationalism, and voluntarism are such dangerous psychic forces that psychotherapy must whenever possible avoid setting itself any such goal. If the goal of wholeness and of realizing his originally intended personality should grow naturally in the patient, we may sympathetically assist him towards it. If it does not grow of itself, it cannot be implanted without remaining a permanent foreign body. Therefore we renounce such artifices when nature herself is clearly not working to this end. As a medical art, equipped only with human tools, our psychotherapy does not presume to preach salvation or a way thereto, for that does not lie within its power.

FOREWORD TO SPIER: “THE HANDS OF CHILDREN”[1]

[1818] Chirology is an art which dates back to very ancient times. The ancient physicians never hesitated to make use of such auxiliary techniques as chiromancy and astrology for diagnostic purposes, as is shown, for instance, by the little book written by Dr. Goclenius,[2] who lived at the end of the sixteenth century in Würzburg. The rise of the natural sciences and hence of rationalism in the eighteenth century brought these ancient arts, which could look back on a thousand or more years of history, into disrepute, and led to the rejection of everything that, on the one hand, defied rational explanation and verification by experiment or, on the other, made too exclusive a claim on intuition. On account of the uncertainty and paucity of scientific knowledge in the Middle Ages, even the most conscientious thinkers were in danger of applying their intuition more to the promotion of supersitition than of science. Thus all early, and particularly medieval, treatises on palmistry are an inextricable tangle of empiricism and fantasy. To establish a scientific method and to obtain reliable results it was necessary, first of all, to make a clean sweep of all these irrational procedures. In the twentieth century, after two hundred years of intensive scientific progress, we can risk resurrecting these almost forgotten arts which have lingered on in semi-obscurity and can test them in the light of modern knowledge for possible truths.

[1819] The view of modern biology that man is a totality, supported by a host of observations and researches, does not exclude the possibility that *hands*, those organs so intimately connected with the psyche, might reveal by their shape and functioning the psychic peculiarities of the individual and thus furnish eloquent and intelligible clues to his character. Modern science is steadily abandoning the medieval conception of the dichotomy of body and mind, and just as the body is now seen to be something neither purely mechanical nor chemical, so the mind seems to be but another aspect of the living body. Conclusions drawn from one as to the nature of the other seem therefore to be within the realm of scientific possibility.

[1820] I have had several opportunities of observing Mr. Spier at work, and must admit that the results he has obtained have made a lasting impression on me. His method, though predominantly intuitive, is based on wide practical experience. Experiences of this nature can be rationalized to a large extent, that is to say they admit of a rational explanation once they have happened. Apart from routine, however, the manner in which they are obtained depends at all decisive points on a finely differentiated, creative intuition which is in itself a special talent. Hence persons with nothing but an average intelligence can hardly be expected to master the method. There is, nevertheless, a definite possibility that people who are intuitively gifted will be able to obtain similar results provided they are properly taught and trained. Intuition is not by any means an isolated gift but a regular function which is capable of being developed. Like the functions of seeing and hearing it has a specific field of experience and a specific range of knowledge based upon this.

[1821] The findings presented in this book are of fundamental importance for psychologists, doctors, and teachers. Spier's chirology is a valuable contribution to the study of human character in its widest sense.

FOREWORD TO THE HEBREW EDITION OF JUNG: “PSYCHOLOGY AND EDUCATION”[1]

[1822] I have before me the Hebrew edition of my essays on psychology and education.[2] Not knowing this language, I am unable to appreciate the merits of the translation, so I can only bid it welcome as a “firstling” that is unique in my experience.

[1823] As the study of the child psyche and the question of education may fairly be said to occupy a privileged position today, it does not seem inappropriate that the contributions of analytical psychology should receive some attention. I have never made the child psyche an object of special research, but have merely collected experiences from my psychotherapeutic practice. These do however give rise to a number of interesting observations, firstly in regard to adults who have not yet rid themselves of their disturbing infantilism, secondly in regard to the complex relations between parents and children, and thirdly in regard to the children themselves.

[1824] The complex psychology of the child and in particular the psychic disorders of children are more often than not causally connected with the psychology of the parents, and in most cases one would do well to pay more attention to the faulty attitude of parents and educators than to the child’s psyche, which in itself would function correctly if it were not disturbed by the harmful influence of the parents. The most important question next to the education of the child is the education of the educator. I hope these essays will prove stimulating in this respect, which is the one I would recommend to the especial consideration of the reader.

ADDENDA

FOREWORD TO “PSYCHOLOGISCHE ABHANDLUNGEN,” VOLUME I[1]

[1825] The *Psychologische Abhandlungen* (Psychological Papers) comprise the works of my friends and pupils as well as other colleagues, and also my own contributions to psychology. In accordance with the character of our psychological interests, this series will include not only works in the area of psychopathology, but also investigations of a general psychological nature. The present state of psychology seems to make it advisable that schools or movements have their own organs of publication; in this way a troublesome scattering of works among many different periodicals can be avoided, and mutuality of outlook can achieve suitable expression through publication in one consistent place.

Küsnacht-Zurich, May 1914

The Editor:
C. G. JUNG

ADDRESS AT THE PRESENTATION OF THE JUNG CODEX[1]

Mr. President, Mr. Minister, viri magnifici, Ladies and Gentlemen!

[1826] It gives me much pleasure to accept this precious gift in the name of our Institute. For this I thank you, and also for the surprising and undeserved honour you have done me in baptising the Codex with my name. I would like to express my special thanks both to Mr. Page, who through generous financial assistance made the purchase of the papyrus possible, and to Dr. Meier, who through unflagging efforts has given it a home.

[1827] Dr. Meier has asked me to say a few words to you about the psychological significance of Gnostic texts. Of the four tracts contained in this codex, I should like to single out especially the *Evangelium Veritatis*, an important Valentinian text that affords us some insight into the mentality of the second century A.D. "The Gospel of Truth" is less a gospel than a highly interesting commentary on the Christian message. It belongs therefore to the series of numerous "phenomena of assimilation," its purpose being to assimilate this strange and hardly understandable message to the Hellenistic-Egyptian world of thought. It is evident that the author was appealing to the intellectual understanding of his reader, as if in remembrance of the words: "We preach Christ crucified, unto the Jews a stumbling-block, and unto the Greeks foolishness" (I Cor. 1.23). For him Christ was primarily a metaphysical figure, a light-bringer, who went forth from the Father in order to illuminate the stupidity, darkness, and unconsciousness of mankind and to lead the individual back to his origins through self-knowledge. This deliverance from *agnosia* relates the text to the accounts which Hippolytus, in his *Elenchos*, has left of the Gnostics, and of the Naassenes and Peratics in particular. There we also find most of what I call the "phenomena of assimilation." By this term I mean to delineate those specifically psychic reactions aroused by the impact that the figure and message of Christ had on the pagan world, most prominently those allegories and symbols such as fish, snake, lion, peacock, etc., characteristic of the first Christian centuries, but also those much more extensive amplifications due to Gnosticism, which clearly were meant to illuminate and render more comprehensible the metaphysical role of the Saviour. For the modern mind this accumulation of symbols, parables, and synonyms has just the opposite effect, since it only deepens the darkness and entangles the light-bringer in a network of barely intelligible analogies.

[1828] Gnostic amplification, as we encounter it in Hippolytus, has a character in part hymn-like, in part dream-like, which one invariably finds where an aroused imagination is trying to clarify an as yet still unconscious content. These are, on the one hand, intellectual, philosophical—or rather, theosophical—speculations, and, on the other, analogies, synonyms, and symbols whose psychological nature is immediately convincing. The phenomenon of assimilation mainly represents the reaction of the psychic matrix, i.e., the unconscious, which becomes agitated and responds with archetypal images, thereby demonstrating to what degree the message has penetrated into the depths of the psyche and how the unconscious interprets the phenomenon of Christ.

[1829] It is not likely that the Gnostic attempts at elucidation met with success in the pagan world, quite aside from the fact that the Church very soon opposed them and whenever possible suppressed them. Luckily during this process some of the best pieces (to judge by their content) were preserved for posterity, so that today we are in a position to see in what way the Christian message was taken up by the unconscious of that age. These assimilation phenomena are naturally of especial significance for psychologists and psychiatrists, who are professionally concerned with the psychic background, and this is the reason why our Institute is so interested in acquiring and translating authentic Gnostic texts.

[1830] Although suppressed and forgotten, the process of assimilation that began with Gnosticism continued all through the Middle Ages, and it can still be observed in modern times whenever individual consciousness is confronted with its own shadow, or the inferior part of the personality. This aspect of human personality, which is most often repressed owing to its incompatibility with one’s self-image, does not consist only of inferior characteristics but represents the entire unconcious; that is, it is almost always the first form in which unconsciousness brings itself to the attention of consciousness. Freud's psychology occupied itself exclusively, so to speak, with this aspect. Behind the shadow, however, the deeper layers of the unconscious come forward, those which, so far as we are able to ascertain, consist of archetypal, sometimes instinctive, structures, so-called "patterns of behaviour." Under the influence of extraordinary psychic situations, especially life crises, these archetypal forms or images may spontaneously invade consciousness, in the case of sick persons just as in the case of healthy ones. The general rule, however, is that modern man needs expert help to become conscious of his darkness, because in most cases he has long since forgotten this basic problem of Christianity: the moral and intellectual *agnosia* of the merely natural man. Christianity, considered as a psychological phenomenon, contributed a great deal to the development of consciousness, and wherever this dialectical process has not come to a standstill we find new evidence of assimilation. Even in medieval Judaism a parallel process took place over the centuries, independently of the Christian one, in the Kabbala. Its nearest analogy in the Christian sphere was philosophical alchemy, whose psychological affinities with Gnosticism can easily be demonstrated.

[1831] The urgent therapeutic necessity of confronting the individual with his own dark side is a secular continuation of the Christian development of consciousness and leads to phenomena of assimilation similar to those found in Gnosticism, the Kabbala, and Hermetic philosophy.

[1832] The reactions of the matrix that we observe these days are not only comparable, both in form and in content, with Gnostic and medieval symbols, but presumably are also of the same sort, and have the same purpose as well, in that they make the figure of *Hyios tou anthropou*, Son of Man, the innermost concern of the individual, and also expand it into a magnitude comparable with that of the Indian *purusha-atman*, the *anima mundi*. At this time, however, I would prefer not to go any further into these modern tendencies, which indeed were developing among the Gnostics.

[1833] Since comparison with these earlier historical stages is of the greatest importance in interpreting the modern phenomena, the discovery of authentic Gnostic texts is, especially for the direction our research is taking, of the greatest interest, all the more so in that it is not only of a theoretical but also of a practical nature. If we seek genuine psychological understanding of the human being of our own time, we must know his spiritual history absolutely. We cannot reduce him to mere biological data, since he is not by nature merely biological but is a product also of spiritual presuppositions.

[1834] I must unfortunately content myself with these bare outlines in attempting to explain our interest in a Gnostic text. Further proof of our interest in Gnosticism and detailed explanations may be found in a number of studies that have already been published.

BIBLIOGRAPHY

BIBLIOGRAPHY

The bibliography does not, as a rule, list works that are the source of contents of this volume. Details of such works are given in the initial footnote of the respective items of contents.

INDEX

INDEX OF TITLES

The titles of articles in this volume are here listed alphabetically, with begining page number, except for reviews, abstracts, forewords, etc., which are readily located in the main index under the name of the subject author.

INDEX

THE COLLECTED WORKS OF *C. G. JUNG*

THE PUBLICATION of the first complete edition, in English, of the works of C. G. Jung was undertaken by Routledge and Kegan Paul, Ltd., in England and by Bollingen Foundation in the United States. The American edition is number XX in Bollingen Series, which since 1967 has been published by Princeton University Press. The edition contains revised versions of works previously published, such as *Psychology of the Unconscious*, which is now entitled *Symbols of Transformation;* works originally written in English, such as *Psychology and Religion;* works not previously translated, such as *Aion;* and, in general, new translations of virtually all of Professor Jung's writings. Prior to his death, in 1961, the author supervised the textual revision, which in some cases is extensive. Sir Herbert Read (d. 1968), Dr. Michael Fordham, and Dr. Gerhard Adler compose the Editorial Committee; the translator is R. F. C. Hull (except for Volume 2) and William McGuire is executive editor.

The price of the volumes varies according to size; they are sold separately, and may also be obtained on standing order. Several of the volumes are extensively illustrated. Each volume contains an index and in most a bibliography; the final volumes will contain a complete bibliography of Professor Jung's writings and a general index to the entire edition.

In the following list, dates of original publication are given in parentheses (of original composition, in brackets). Multiple dates indicate revisions.

*1. PSYCHIATRIC STUDIES

On the Psychology and Pathology of So-Called Occult Phenomena (1902)
On Hysterical Misreading (1904)
Cryptomnesia (1905)

On Manic Mood Disorder (1903)
A Case of Hysterical Stupor in a Prisoner in Detention (1902)
On Simulated Insanity (1903)
A Medical Opinion on a Case of Simulated Insanity (1904)
A Third and Final Opinion on Two Contradictory Psychiatric Diagnoses (1906)
On the Psychological Diagnosis of Facts (1905)

†2. EXPERIMENTAL RESEARCHES

Translated by Leopold Stein in collaboration with Diana Riviere

STUDIES IN WORD ASSOCIATION (1904–7, 1910)
The Associations of Normal Subjects (by Jung and F. Riklin)
An Analysis of the Associations of an Epileptic
The Reaction-Time Ratio in the Association Experiment
Experimental Observations on the Faculty of Memory
Psychoanalysis and Association Experiments
The Psychological Diagnosis of Evidence
Association, Dream, and Hysterical Symptom
The Psychopathological Significance of the Association Experiment
Disturbances in Reproduction in the Association Experiment
The Association Method
The Family Constellation
PSYCHOPHYSICAL RESEARCHES (1907–8)
On the Psychophysical Relations of the Association Experiment
Psychophysical Investigations with the Galvanometer and Pneumograph in Normal and Insane Individuals (by F. Peterson and Jung)
Further Investigations on the Galvanic Phenomenon and Respiration in Normal and Insane Individuals (by C. Ricksher and Jung)
Appendix: Statistical Details of Enlistment (1906); New Aspects of Criminal Psychology (1908); The Psychological Methods of

Investigation Used in the Psychiatric Clinic of the University of Zurich (1910); On the Doctrine of Complexes ([1911] 1913); On the Psychological Diagnosis of Evidence (1937)

* 3. THE PSYCHOGENESIS OF MENTAL DISEASE

The Psychology of Dementia Praecox (1907)
The Content of the Psychoses (1908/1914)
On Psychological Understanding (1914)
A Criticism of Bleuler’s Theory of Schizophrenic Negativism (1911)
On the Importance of the Unconscious in Psychopathology (1914)
On the Problem of Psychogenesis in Mental Disease (1919)
Mental Disease and the Psyche (1928)
On the Psychogenesis of Schizophrenia (1939)
Recent Thoughts on Schizophrenia (1957)
Schizophrenia (1958)

† 4. FREUD AND PSYCHOANALYSIS

Freud’s Theory of Hysteria: A Reply to Aschaffenburg (1906)
The Freudian Theory of Hysteria (1908)
The Analysis of Dreams (1909)
A Contribution to the Psychology of Rumour (1910–11)
On the Significance of Number Dreams (1910–11)
Morton Prince, “The Mechanism and Interpretation of Dreams”: A Critical Review (1911)
On the Criticism of Psychoanalysis (1910)
Concerning Psychoanalysis (1912)
The Theory of Psychoanalysis (1913)
General Aspects of Psychoanalysis (1913)
Psychoanalysis and Neurosis (1916)
Some Crucial Points in Psychoanalysis: A Correspondence between Dr. Jung and Dr. Loÿ (1914)

Prefaces to “Collected Papers on Analytical Psychology” (1916, 1917)
The Significance of the Father in the Destiny of the Individual (1909/1949)
Introduction to Kranefeldt’s “Secret Ways of the Mind” (1930)
Freud and Jung: Contrasts (1929)

‡ 5. SYMBOLS OF TRANSFORMATION (1911–12/1952)

PART 1

Introduction
Two Kinds of Thinking
The Miller Fantasies: Anamnesis
The Hymn of Creation
The Song of the Moth

PART II

Introduction
The Concept of Libido
The Transformation of Libido
The Origin of the Hero
Symbols of the Mother and of Rebirth
The Battle for Deliverance from the Mother
The Dual Mother
The Sacrifice
Epilogue
Appendix: The Miller Fantasies

* 6. PSYCHOLOGICAL TYPES (1921)

Introduction
The Problem of Types in the History of Classical and Medieval Thought
Schiller’s Ideas on the Type Problem
The Apollinian and the Dionysian

The Type Problem in Human Character
The Type Problem in Poetry
The Type Problem in Psychopathology
The Type Problem in Aesthetics
The Type Problem in Modern Philosophy
The Type Problem in Biography
General Description of the Types
Definitions
Epilogue
Four Papers on Psychological Typology (1913, 1925, 1931, 1936)

† 7. TWO ESSAYS ON ANALYTICAL PSYCHOLOGY

On the Psychology of the Unconscious (1917/1926/1943)
The Relations between the Ego and the Unconscious (1928)
Appendix: New Paths in Psychology (1912);
The Structure of the Unconscious (1916) (new versions, with variants, 1966)

‡ 8. THE STRUCTURE AND DYNAMICS OF THE PSYCHE

On Psychic Energy (1928)
The Transcendent Function ([1916]/1957)
A Review of the Complex Theory (1934)
The Significance of Constitution and Heredity in Psychology (1929)
Psychological Factors Determining Human Behavior (1937)
Instinct and the Unconscious (1919)
The Structure of the Psyche (1927/1931)
On the Nature of the Psyche (1947/1954)
General Aspects of Dream Psychology (1916/1948)
On the Nature of Dreams (1945/1948)
The Psychological Foundations of Belief in Spirits (1920/1948)
Spirit and Life (1926)

Basic Postulates of Analytical Psychology (1931)
Analytical Psychology and *Weltanschauung* (1928/1931)
The Real and the Surreal (1933)
The Stages of Life (1930–1931)
The Soul and Death (1934)
Synchronicity: An Acausal Connecting Principle (1952)
Appendix: On Synchronicity (1951)

* 9. PART I. THE ARCHETYPES AND THE COLLECTIVE UNCONSCIOUS

Archetypes of the Collective Unconscious (1934/1954)
The Concept of the Collective Unconscious (1936)
Concerning the Archetypes, with Special Reference to the Anima Concept (1936/1954)
Psychological Aspects of the Mother Archetype (1938/1954)
Concerning Rebirth (1940/1950)
The Psychology of the Child Archetype (1940)
The Psychological Aspects of the Kore (1941)
The Phenomenology of the Spirit in Fairytales (1945/1948)
On the Psychology of the Trickster-Figure (1954)
Conscious, Unconscious, and Individuation (1939)
A Study in the Process of Individuation (1934/1950)
Concerning Mandala Symbolism (1950)
Appendix: Mandalas (1955)

* 9. PART II. AION (1951)

RESEARCHES INTO THE PHENOMENOLOGY OF THE SELF

The Ego
The Shadow
The Syzygy: Anima and Animus
The Self
Christ, a Symbol of the Self

The Sign of the Fishes
The Prophecies of Nostradamus
The Historical Significance of the Fish
The Ambivalence of the Fish Symbol
The Fish in Alchemy
The Alchemical Interpretation of the Fish
Background to the Psychology of Christian Alchemical Symbolism
Gnostic Symbols of the Self
The Structure and Dynamics of the Self
Conclusion

* 10. CIVILIZATION IN TRANSITION

The Role of the Unconscious (1918)
Mind and Earth (1927/1931)
Archaic Man (1931)
The Spiritual Problem of Modern Man (1928, 1931)
The Love Problem of a Student (1928)
Woman in Europe (1927)
The Meaning of Psychology for Modern Man (1933’1934)
The State of Psychotherapy Today (1934)
Preface and Epilogue to “Essays on Contemporary Events” (1946)
Wotan (1936)
After the Catastrophe (1945)
The Fight with the Shadow (1946)
The Undiscovered Self (Present and Future) (1957)
Flying Saucers: A Modern Myth (1958)
A Psychological View of Conscience (1958)
Good and Evil in Analytical Psychology (1959)
Introduction to Wolff’s “Studies in Jungian Psychology” (1959)
The Swiss Line in the European Spectrum (1928)

Reviews of Keyserling’s “America Set Free” (1930) and “La Révolution Mondiale” (1934)

The Complications of American Psychology (1930)

The Dreamlike World of India (1939)

What India Can Teach Us (1939)

Appendix: Documents (1933–1938)

† 11. PSYCHOLOGY AND RELIGION: WEST AND EAST

WESTERN RELIGION

Psychology and Religion (The Terry Lectures) (1938/1940)

A Psychological Approach to the Dogma of the Trinity (1942/1948)

Transformation Symbolism in the Mass (1942/1954)

Forewords to White’s “God and the Unconscious” and Werblowsky’s “Lucifer and Prometheus” (1952)

Brother Klaus (1933)

Psychotherapists or the Clergy (1932)

Psychoanalysis and the Cure of Souls (1928)

Answer to Job (1952)

EASTERN RELIGION

Psychological Commentaries on “The Tibetan Book of the Great Liberation” (1939/1954) and “The Tibetan Book of the Dead” (1935/1953)

Yoga and the West (1936)

Foreword to Suzuki’s “Introduction to Zen Buddhism” (1939)

The Psychology of Eastern Meditation (1943)

The Holy Men of India: Introduction to Zimmer’s “Der Weg zum Selbst” (1944)

Foreword to the “I Ching” (1950)

* 12. PSYCHOLOGY AND ALCHEMY (1944)

Prefatory note to the English Edition ([1951?] added 1967)

Introduction to the Religious and Psychological Problems of Alchemy

Individual Dream Symbolism in Relation to Alchemy (1936)
Religious Ideas in Alchemy (1937)
Epilogue

† 13. ALCHEMICAL STUDIES

Commentary on “The Secret of the Golden Flower” (1929)
The Visions of Zosimos (1938/1954)
Paracelsus as a Spiritual Phenomenon (1942)
The Spirit Mercurius (1943/1948)
The Philosophical Tree (1945/1954)

‡ 14. MYSTERIUM CONIUNCTIONIS (1955–56)

AN INQUIRY INTO THE SEPARATION AND SYNTHESIS OF PSYCHIC OPPOSITES IN ALCHEMY

The Components of the Coniunctio
The Paradoxa
The Personification of the Opposites
Rex and Regina
Adam and Eve
The Conjunction

* 15. THE SPIRIT IN MAN, ART, AND LITERATURE

Paracelsus (1929)
Paracelsus the Physician (1941)
Sigmund Freud in His Historical Setting (1932)
In Memory of Sigmund Freud (1939)
Richard Wilhelm: In Memoriam (1930)
On the Relation of Analytical Psychology to Poetry (1922)
Psychology and Literature (1930/1950)
“Ulysses”: A Monologue (1932)
Picasso (1932)

† 16. THE PRACTICE OF PSYCHOTHERAPY

GENERAL PROBLEMS OF PSYCHOTHERAPY

Principles of Practical Psychotherapy (1935)
What Is Psychotherapy? (1935)
Some Aspects of Modern Psychotherapy (1930)
The Aims of Psychotherapy (1931)
Problems of Modern Psychotherapy (1929)
Psychotherapy and a Philosophy of Life (1943)
Medicine and Psychotherapy (1945)
Psychotherapy Today (1945)
Fundamental Questions of Psychotherapy (1951)

SPECIFIC PROBLEMS OF PSYCHOTHERAPY

The Therapeutic Value of Abreaction (1921/1928)
The Practical Use of Dream-Analysis (1934)
The Psychology of the Transference (1946)
Appendix: The Realities of Practical Psychotherapy ([1937] added, 1966)

‡ 17. THE DEVELOPMENT OF PERSONALITY

Psychic Conflicts in a Child (1910/1946)
Introduction to Wickes's "Analyses der Kinderseele" (1927/1931)
Child Development and Education (1928)
Analytical Psychology and Education: Three Lectures (1926/1946)
The Gifted Child (1943)
The Significance of the Unconscious in Individual Education (1928)
The Development of Personality (1934)
Marriage as a Psychological Relationship (1925)

18. THE SYMBOLIC LIFE

Miscellaneous Writings

19. BIBLIOGRAPHY OF C. G. JUNG'S WRITINGS

20. GENERAL INDEX TO THE COLLECTED WORKS

See also:

C. G. JUNG: LETTERS

Selected and edited by Gerhard Adler, in collaboration with Aniela Jaffé. Translations from the German by R.F.C. Hull.

VOL. 1: 1906–1950

VOL. 2: 1951–1961

THE FREUD/JUNG LETTERS

Edited by William McGuire, translated by
Ralph Manheim and R.F.C. Hull

* The contents of each part are related to volumes of the Collected Works as indicated. Dates are of first publication or, when known, of writing.

[1] [The charts and diagrams have been re-executed, and photographs of the drawings (actually water-colours) have kindly been furnished by Dr. E. A. Bennet.]

[1] [*Anthropologie in pragmatischer Hinsicht* (1798), Pt. I, Bk. I, sec. 5.]

[2] ["There is nothing in the mind that was not in the senses." Cf. Leibniz, *Nouveaux Essais sur l'Entendement humain*, Bk. II, ch. 1, sec. 2, in response to Locke. The formula was scholastic in origin; cf. Duns Scotus, *Super universalibus Porphyrii*, qu. 3.]

[3] [*In Johannis Evang.*, XXXIV, 2. Cf. *Symbols of Transformation* (C.W., vol. 5), par. 162 and n. 69.]

[4] [Cf. "The Realities of Practical Psychotherapy" (C.W., vol. 16, 2nd edn.), pars. 558ff.]

[5] [What Jung may have had in mind are the *melothesiae*, explained in "Psychology and Religion" (C.W., vol. 11), par. 113, n. 5; cf. *Psychology and Alchemy*, fig. 156.]

[6] [*Psychological Types* (C.W., vol. 6), Definition 47.]

[7] [Ibid., Def. 53.]

[8] [Ibid., Def. 5.]

[9] [Ibid., Def. 21.]

[10] [Ibid., Def. 44.]

[11] [Ibid., Def. 35.]

[12] [Ibid., Def. 30.]

[13] [Ibid.]

[14] [The theory was independently advanced by William James and by the Danish physiologist C. G. Lange, and is commonly referred to by both their names.]

[15] [Jung and Peterson, “Psychophysical Investigations with the Galvanometer and Pneumograph in Normal and Insane Individuals” (1907); Jung and Ricksher, “Further Investigations on the Galvanic Phenomenon and Respiration in Normal and Insane Individuals” (1907); in C.W., vol. 2.]

[16] [Possibly a stenographic slip for Jakob Freundlich, who conducted electrocardiogram experiments; see his article in *Deutsches Archiv für klinische Medizin* (Berlin), 177:4 (1934), 449–57.]

[17] [According to a Japanese legend, the *namazu*, a kind of catfish of monstrous size, carries on its back most of Japan, and when annoyed it moves its head or tail, thus provoking earthquakes. The legend is often depicted in Japanese art.]

[18] [Louis Victor de Broglie, French physicist, recipient of Nobel Prize for physics (1929), discovered the wave character of electrons. In the preceding sentence of the text, instead of “oscillations” and “corpuscles” the more usual terms would be “waves” and “particles.”]

[19] [Cf. “Synchronicity: An Acausal Connecting Principle” (C.W., vol. 8).]

[1] [Cf. *The Archetypes and the Collective Unconscious* (C.W., vol. 9, i), par. 5.]

[2] See *Psychology of the Unconscious* [or *Symbols of Transformation (C.W.*, vol. 5), index, s.v.].

[3] [Henri Hubert and Marcel Mauss, *Mélanges d'histoire des religions*, p. xxix.]

[4] [Cf. *Symbols of Transformation*, par. 154.]

[5] [Cf. "Psychology and Literature" (C.W., vol. 15), par. 150; "Psychology and Religion" (C.W., vol. 11), par. 100, and "Brother Klaus" (ibid.), par. 484. Documentation of the Rhodesian "sun-wheels" has not been possible, though such rock-carved forms are noted in Angola and South Africa: cf. Willcox, *The Rock Art of South Africa*, fig. 23 and pls. xvii–xx. Their dating is in doubt. The "rhino with tick-birds" is from the Transvaal and is in a museum in Pretoria. It was discovered in 1928 and widely publicized.]

[6] [Albrecht Dieterich, *Eine Mithrasliturgie*.]

[7] [*Symbols of Transformation*, pars. 151ff.; *The Archetypes and the Collective Unconscious*, par. 105; *The Structure and Dynamics of the Psyche* (C.W. vol. 8), pars. 228 and 318f.]

[8] *How Natives Think*, trans. by Lilian A. Clare.

[9] For general description of types and functions, see *Psychological Types*, Chap. X.

[10] [Cf. Terence, *Heauton Timorumenos*, 1.1.25: "Homo sum; humani nil a me alienum puto" (I am a man; I count nothing human alien to me).]

[11] [*Civilization in Transition* (C.W., vol. 10), pars. 94ff. and 946ff.]

[12] *Studies in Word Association*, trans. by Eder. [Also in *Experimental Researches* (C.W., vol. 2).]

[13] *Two Essays on Analytical Psychology* (C.W., vol. 7), pars. 245f., 304f.

[14] [Cf. supra, par. 48, n. 15.]

[15] [Cf. T. M. Davie, “Comments upon a Case of ‘Periventricular Epilepsy,’ ” *British Medical Journal*, no. 3893 (Aug. 17, 1935), 293–297. The dream is reported by a patient of Davie as follows: “Someone beside me kept on asking me something about oiling some machinery. Milk was suggested as the best lubricant. Apparently I thought that oozy slime was preferable. Then a pond was drained, and amid the slime there were two extinct animals. One was a minute mastodon. I forgot what the other one was.”

Davie’s comment: “I thought it would be of interest to submit this dream to Jung to ask what his interpretation would be. He had no hesitation in saying that it indicated some organic disturbance, and that the illness was not primarily a psychological one, although there were numerous psychological derivatives in the dream. The drainage of the pond he interpreted as the damming-up of the cerebrospinal fluid circulation.”]

[16] [*The Practice of Psychotherapy* (C.W., vol. 16), pars. 344f.]

[17] [Cf. supra, par. 17, n. 4.]

[18] [The mandala motif, in a lecture, “Traumsymbole des Individuationsprozesses,” that Jung delivered a few weeks previously at the Eranos Tagung. It was published the next year in *Eranos-Jahrbuch 1935*; in translation, as “Dream Symbols of the Process of Individuation,” *The Integration of the Personality*, 1939; revised as Part II of *Psychologie und Alchemie*, 1944 (= C.W., vol. 12). See also infra, par. 406, n. 15.]

[19] *The Secret of the Golden Flower*. [The Chinese text was translated by Richard Wilhelm. The commentary by Jung is contained in *Alchemical Studies* (C.W., vol. 13).]

[20] [William McDougall (1871–1938). American psychiatrist. Cf. Jung’s “On the Psychogenesis of Schizophrenia” (C.W., vol. 3), par. 504, and “The Therapeutic Value of Abreaction” (C.W., vol. 16), par. 255.]

[21] [Cf. *The I Ching, or Book of Changes*, trans. by Wilhelm/Baynes, 3rd edn., introduction, p. liii.]

[1] [Cf. “On the Importance of the Unconscious in Psychopathology,” and “On Psychological Understanding,” both delivered in 1914 (C.W., vol. 3).]

[2] For example, the figures of *anima* and *animus*. [See *Two Essays on Analytical Psychology* (C.W., vol. 7), pars. 296ff.]

[3] “The Familial Constellations” (C.W., vol. 2) and “The Significance of the Father in the Destiny of the Individual” (C.W., vol. 4), pars. 698–702.

[4] “On the Practical Use of Dream Analysis” (C.W., vol. 16). [Also “General Aspects of Dream Psychology” and “On the Nature of Dreams” (C.W., vol. 8).]

[5] [The reference is to Wilhelm Wundt, of Leipzig (1832–1920).]

[6] *Psychological Types*, Def. 48. See also *Two Essays*, pars. 296ff. [Also *Aion* (C.W., vol. 9, ii), ch. 3.]

[7] [E.g., *Symbols of Transformation*, Part II, ch. V, especially par. 395.]

[8] [The reference is to the disaster of 1908, when 90 per cent of the Sicilian city was destroyed, with a loss of 60,000 lives.]

[9] Cf. W. Y. Evans-Wentz. *The Tibetan Book of the Dead.*

[10] [Cf. infra, pars. 525ff. The case is also discussed in Jacobi, *Complex/Archetype Symbol*, pp. 139ff.]

[11] ["Brother Klaus" (C.W., vol. 11).]

[12] [*Psychology and Alchemy* (C.W., vol. 12), pars. 315ff.]

[1] “And Isis, the great lady of enchantments, said, ‘Flow on, poison, and come forth from Rā. … I have worked, and I make the poison to fall on the ground, for the venom hath been mastered.… Let Rā live, and let the poison die; and if the poison live then Rā shall die.’ And similarly, a certain man, the son of a certain man, shall live, and the poison shall die.” E. A. Wallis Budge, *Egyptian Literature*, I, p. 55.

[2] [*Symbols of Transformation*, pars. 375ff.]

[3] R. Campbell Thompson, *The Epic of Gilgamish.*

[4] [Josephus, *The Jewish War* 2.111–115.]

[5] [Cf. *The Structure and Dynamics of the Psyche* (C.W., vol. 8), frontispiece and refs. with it.]

[6] [Thus far, the dream is documented in the “Life of Sophocles,” sec. 12, in *Sophoclis Fabulae*, ed. Pearson, p. xix.]

[7] [The people of ancient Phocaea, on the western coast of Asia Minor, founded Massilia (Marseilles) and colonies on the east coast of Spain.]

[8] [Cf. *Psychological Types*, ch. V, 4a.]

[9] [*Symbols of Transformation*, pars. 572f.]

[10] [Cf. *Psychology and Alchemy*, par. 105, n. 35, citing Foucart, *Les Mystères d’Eleusis*. According to classicists, Asterios’ report referred to rituals of Demeter celebrated at Alexandria in which a priest (not of Apollo) and a priestess performed the *hierosgamos*. The narration of *aischrologia* to please Demeter occurred during the Thesmophoria, an autumn festival in her honour, the Stenia, celebrating her return, and the mid-winter Haloa, sacred to Demeter and Dionysus. Cf. Harrison, *Prolegomena*, ch. IV, esp. pp. 136, 148f.]

[11] [Herodotus 2.60 (Penguin edn., pp. 125f.).]

[12] [See *Aion* (C.W., vol. 9, ii), frontispiece, and *Symbols of Transformation*, index, s.v.]

[13] *New Sayings of Jesus and Fragment of a Lost Gospel*, ed. by Grenfell and Hunt [pp. 36 and 15].

[14] [It is MS. Bruce 96, Bodleian Library, Oxford. Cf. *Psychology and Alchemy*, par. 138f.]

[15] [For further analysis of this dream, from the Basel Seminar (supra, p. 3), see Jung’s *L’Homme à la découverte de son âme*, pp. 214ff.]

15 [*Jahrbuch für psychoanalytische und psychopathologische Forschungen* (Leipzig and Vienna); Jung withdrew from the editorship in 1913.]

[16] W. M. Kranefeldt, *Secret Ways of the Mind;* G. R. Heyer, *The Organism of the Mind;* Gerhard Adler, *Entdeckung der Seele.*

[17] [Luke 18:19.]

[18] [See supra, par. 135, n. 15.]

[1] [The case is discussed more fully in “The Realities of Practical Psychotherapy” (C.W., vol. 16, 2nd edn.), appendix. See also “Concerning Mandala Symbolism” (C.W., vol. 9, i), pars. 656–659 and figs. 7, 8, and 9, showing mandalas painted by this patient.]

[2] [Supra, pars. 322f.]

[3] [This is actually the same case that was discussed supra, pars. 334f.]

[4] [For Jung’s later views on this problem, see “The Psychology of the Transference” (C.W., vol. 16).]

[5] *Two Essays* (C.W., vol. 7), pars. 374ff.

[6] *Two Essays*, pars. 206ff.

[7] “The Role of the Unconscious” (C.W., vol. 10), par. 17.

[8] “Wotan” (C.W., vol. 10).

[9] [Act III. in a speech by Don Juan (Penguin edn., 1952, p. 149).]

[10] [Cf. Virgil, *Eclogue V*, 64: “ipsa sonant arbusta: ‘deus, deus ille, Menalca!’” (the very groves ring out: “A god is he, a god, Menalcas!”).]

[11] See particularly the “Commentary on *The Secret of the Golden Flower”* (C.W., vol. 13, and “The Aims of Psychotherapy” (C.W., vol. 16).

[12] *See Psychological Types*, Def. 29, and *Two Essays, pars*, 266ff. [Also “A Study in the Process of Individuation” C.W., vol. 9. iv.]

[13] [Cf. *Psychology and Alchemy*, pars. 44, 126, 129, 135, 325ff.]
[Cf. *Psychology and Alchemy* (C.W., vol. 12), par. 360.]

[14] This case provided the material for Part II of *Psychology and Alchemy.*]

[15] “Traumsymbole des Individuationsprozesses,” in the *Eranos-Jahrbuch 1935*. [Now Part II of *Psychology and Alchemy.*]

[1] [An abstract, recorded by Otto Rank, of Jung's "Bericht über Amerika," at the Second Psychoanalytic Congress in Nuremberg, 30–31 Mar. 1910. Abstracts of the papers read at the Congress were published in the *Jahrbuch für psychoanalytische und psychopathologische Forschungen*, II:2 (1910). Rank also published a briefer abstract in the *Zentralblatt für Psychoanalyse*, I:3 (Dec. 1910), 130; trans. in *The Freud/Jung Letters*, 223F, n. 6. Also see ibid., index, s.v. Jung: "Report on America," for evidence that a report on the psychoanalytic movement in the U.S.A. had originally been planned. A MS of Jung's report has not been found.]

[2] [In Aug–Sept. 1909, to the Clark Conference, and in Mar. 1910, to Chicago.]

[1] [Abstract of a lecture to the Zurich Psychoanalytic Society on 22 Nov. 1912, published in the *Internationale Zeitschrift für ärztliche Psychoanalyse*, I:1 (1913), 115 (*Bulletin* section). See *The Freud/Jung Letters*, 323J, n. 3. For Jung's later views on the influence of Negroes and American Indians on American behaviour, see "Mind and Earth" and "The Complications of American Psychology" (C.W., vol. 10). A MS of the present lecture has not been discovered.]

[2] [So bracketed in the abstract.]

[3] [Not traced; perhaps an earlier lecture to the Society, but cf. the preceding "Report on America."]

[4] [Neither this work (trans. by Hinkle, *Psychology of the Unconscious*) nor its revision, C.W., vol. 5, contains reference to sacrificial symbols in the dreams of Negroes. Concerning the dreams of psychotic Negroes otherwise, see C.W., vol. 6, par. 747, and C.W., vol. 5, par. 154.]

[1] [Unpublished; from a MS in Jung's hand, dated 19 Jan. 1930. The background of Jung's remarks could not be ascertained.]

[2] [*Das Geheimnis der goldenen Blüte* (late 1929); trans. by Cary F. Baynes, *The Secret of the Golden Flower* (1931; revised edn., 1962). See Jung's commentary, C.W., vol. 13, and his memorial address for Wilhelm (who died 1 Mar. 1930), C.W., vol. 15.]

[3] [In 1925; see *Memories, Dreams, Reflections*, ch. IX, iii.]

[4] [In 1924–25; ibid., ch. IX, ii.]

[5] [Cf. "Concerning Rebirth" (C.W., vol. 9, i), par. 250.]

[1] [(“Contemporary Psychic Problems.”) Psychologische Abhandlungen, III. Thirteen articles by Jung, originally published from 1925 on, and assigned to seven C.W. vols.; and one essay, “‘Komplex’ und Mythos,” by W. M. Kranefeldt.]

[2] [*Il problema dell’inconscio nella psicologia moderna*, trans. by Arrigo Vita and Giovanni Bollea (Turin), originally published 1942; new edn., 1959, with the present foreword, here trans. from the German original.]

[1] [With an introduction by Bronislaw Malinowski (London and New York, 1931). Aldrich’s trans. of the foreword is reproduced here with minor changes. The original appears to have been lost. See Jung’s letter to the author, 5 Jan. 1931, in *Letters*, ed. G. Adler, vol. 1. Charles Roberts Aldrich, who resided in California, died in 1933.]

[2] [*Wandlungen und Symbole der Libido* (1912).]

[1] [Unpublished typescript, written in English. While it apparently was intended for the New York press, no instance of its publication or quotation has been discovered. For an interview that Jung gave the *New York Times* (4 Oct. 1936) upon leaving New York, see “The 2,000,000 Year Old Man,” in *C. G. Jung Speaking*.]

[2] [For Jung’s contribution, under this title, see C.W., vol. 8. The symposium at Harvard was actually entitled *Factors Determining Human Behavior*.]

[1] [A lecture delivered in English at the Institute of Medical Psychology (The Tavistock Clinic), London, 14 Oct. 1936, when Jung had just returned from his visit to the United States (see the preceding article). He had written the lecture during the voyage, according to his daughter Marianne Niehus-Jung. The text, based on a holograph MS, has not been previously published, though similar ideas are found in an interview with Jung in the *Observer* (London, date undetermined), reprinted in *Time*, 9 Nov. 1936, *The Living Age* (New York), Dec. 1936, and as "The Psychology of Dictatorship" in *C. G. Jung Speaking*.]

[2] [Arrival of a German warship at the port of Agadir, Morocco, which precipitated an international crisis in 1911.]

[3] [Jung evidently elaborated this schema in his lecture.]

[4] [As examples of regression, presumably elaborated in the lecture, the holograph itemizes: 1. Father and mother complex. 2. Complex of infantile religion. 3. Regression to infantile criminality. 4. Regression to archetypes: schizophrenia, mystical experience, and analytical experience.]

[5] [Cf. "The Role of the Unconscious" (C.W., vol. 10), pars. 17ff.]

[6] [Cf. Price, *An Account of Some Further Experiments with Willy Schneider* (1925), *The Phenomena of Rudi Schneider* (1926), and other books on these Austrian mediums.]

[7] [Mosley founded the British Union of Fascists ("Blackshirts") in 1932. Col. François de la Rocque was leader of the French reactionary group "Croix de Feu."]

[8] [National Recovery Administration, established to administer the National Industrial Recovery Act (13 June 1933), recognizing a "national emergency" and vesting in the President (F. D. Roosevelt) authority to approve codes of fair competition for various trades and industries, regulate wages, hours of labour, etc.]

[9] [Sir Samuel Hoare, later Viscount Templewood (1880–1959), British foreign secretary in 1935, when he sought to appease Italy in its conquest of Ethiopia.]

[10] [Cf. "Wotan" (C.W., vol. 10), par. 373.]

[11] [Cf. "A Study in the Process of Individuation" and "Concerning Mandala Symbolism" (C.W., vol. 9, i).]

[12] [Cf. "The Realities of Practical Psychotherapy" (C.W., vol. 16, 2nd edn., Appendix), par. 560. Also Arthur Avalon, *The Serpent Power*.]

[13] [Concerning the persona, cf. *Two Essays on Analytical Psychology*, C.W., vol. 7, pars. 243ff., 305ff.]

[14] [Source unidentifiable. MacDonald (1886–1937) was Great Britain's first Labour prime minister, 1924, and again 1929–1935.]

[15] [*The Observer* (London), 11 Oct. 1936, in an article written from Salamanca 3 Oct. 1936. Unamuno (1964–1936) repudiated the Franco regime in a moving speech at Salamanca on 12 Oct. 1936.]

[16] [Illegible in holograph.]

[1] [Translated from “Rückkehr zum einfachen Leben,” *DU: Schweizerische Monatsschrift*, Jhg. I, no. 3 (May 1941). An editorial note in *DU* states that it is a summation of Jung’s reply to a questionnaire sent out by the Schweizer Feuilleton-Dienst (features service) to various eminent Swiss, on the effects of wartime conditions in Switzerland.]

[2] [*Faust II*, Act 5.]

[1] [(Translated from the French by A.S.B.G.) The volume for which this was written (in the series Collection Action et Pensée, no. 10, Geneva, 1944) contained five essays by Jung, translated, with a preface, by Roland Cahen-Salabelle, together with extracts from Jung's Basel Seminar (1934) and "Tavistock Lectures" (supra, pars. 1ff.), edited by Dr. Cahen (later form of his name). Only two of the essays are among the eleven that composed *Modern Man in Search of a Soul* (New York and London, 1933).]

[1] [Translated from a typescript, “Randglossen zur Zeitgeschichte,” dated 1945, unpublished except for the last nine paragraphs (see below, par. 1374, n. 5). Cf. Jung, *Aufsätze zur Zeitgeschichte* (1946); trans. as *Essays on Contemporary Events* (1947); its contents (in C.W., vols. 10 and 16) were published originally 1936–45.]

[2] This can be disputed, since it is the Christian *organizations* that have demonstrated their impotence. But if you identify the Church with Christianity, this distinction collapses.

[3] All -isms that promise a “better” world are to be distrusted on principle, for this world only becomes different, but not better. Man can, however, to a certain extent adopt a better or worse *attitude*, one that is more reasonable or less. Of the basic evils of existence, inner and outer, he will never be freed. He would do better to realize that this world is a battleground, and at any time only a short span between birth and death.

[4] [Nazi concentration camp of World War II, near Lublin, Poland.]

[5] [Pars. 1375–83 were published in the *Basler Nachrichten*, no. 486 (16 Nov. 1946), under the title “Zur Umerziehung des deutschen Volkes” (“On the Re-education of the German People”).]

[6] [“Wotan” C. W., vol. 10, par. 391.]

[7] [*Works*, trans. by C. de B. Evans. II, pp. 18f.]

[8] In view of the most recent events in Europe one must guard against the assumption that a Christian education has penetrated to the marrow.

[9] [Ludwig Büchner (1824–99), German physician and philosopher, apostle of extreme materialism.]

[1] [Not published until 15 Nov. 1974, when Kolb's and Jung's letters were printed in *Mishmar* (in Hebrew), with editorial comments, under the heading, "What Did Jung Say to Mishmar's Correspondent in Switzerland 29 Years Ago?" The publication was the consequence of an inquiry sent to *Mishmar* by the editors of the C.W., attempting to learn whether the late Eugen Kolb had published Jung's letter.]

[1] [From a holograph, with typescript passages, written (in English) in 1948 in response to a request from the United Nations Educational, Scientific and Cultural Organization (Unesco). The Second General Conference of Unesco, in Nov.–Dec. 1947, had adopted a resolution instructing the Director General to promote “enquiries into modern methods which have been developed in education, political science, philosophy and psychology for changing mental attitudes and into the social and political circumstances which favour the employment of particular techniques.” Accordingly, memoranda were commissioned from individuals at specialized institutes, including the International Psychoanalytic Association, the Tavistock Institute of Human Relations, and the C. G. Jung Institute for Analytical Psychology. Mr. P. W. Martin, an official of Unesco, conducted the arrangements with the Jung Institute. Jung’s memorandum, published here (with minor stylistic revisions), was later partially incorporated in a text prepared by Dr. Jolande Jacobi on behalf of the Jung Institute, which was sent to Unesco on 23 June 1948 for discussion at the Conference on Methods of Attitude Change Conducive to International Understanding in October 1948, at Royaumont (near Paris). The Jung Institute’s memorandum was not, however, included in the agenda of the Royaumont Conference. Acknowledgment is made to the Unesco Press for permission to publish this memorandum and to Mr. J. Havet, Director of the Unesco Department of Social Sciences, for his advice and assistance in 1974.]

[2] Here a list of “books of reference” was appended: (1) Attitude: *Psychological Types*. (2) Method: *The Relations between the Ego and the Unconscious; L’Homme à la découverte de son âme;* Baynes, *Mythology of the Soul;* Wickes, *Inner World of Childhood* and *Inner World of Man; Psychologie und Erziehung*. (3) Psychology: *Über die Psychologie des Unbewussten; Psychology and Religion; Über psychische Energetik und das Wesen der Träume; Psychologie der Übertragung;* Jacobi, *The Psychology of C. G. Jung.*

[1] [Letter, of 14 Sept. 1949, to the editors of the *Zürcher Student* (Eidgenossische Technische Hochschule = Federal Polytechnic Institute), published in the Nov. 1949 issue, Jhg. 27.]

[1] [Written in 1949 for a proposed English edition of Erich Neumann, *Tiefenpsychologie und neue Ethik* (Zurich, 1949). An English edition was published only in 1969 (New York and London), trans. by Eugene Rolfe, with the present trans. of the foreword by R.F.C. Hull (here slightly revised). For Jung's appraisal of the book when it was published in German, see *Letters*, ed. G. Adler, vol. 1, to Neumann, Dec. 1948, and to J. Fierz, 13 Jan. 49.]

[2] "The most wretched of inventors are those who invent a new morality: they are always immoralists," says a French aphorist. [Untraceable.]

[1] [London, 1950. The foreword was written in English. Helton Godwin Baynes (1882–1943), English analytical psychologist, accompanied Jung on his expedition to East Africa in 1925–26.]

[2] [London and New York, 1923. The version in C.W., vol. 6, is the Baynes trans. revised by R.F.C. Hull. Baynes also translated, in collaboration with his then wife Cary F. Baynes, Jung's *Contributions to Analytical Psychology* (London and New York, 1928) and *Two Essays on Analytical Psychology* (London and New York, 1928).]

[3] [London, 1940.]

[4] [London, 1941.]

[1] [*Weltwoche* (Zurich), Jhg. 22, no. 1100 (10 Dec. 1954). Jung was one of several prominent persons asked to comment on this subject.]

[1] [Letter to *Weltwoche* (Zurich), Jhg. 22, no. 1078 (9 July 1954), in reply to the editor's request for an interview by Georg Gerster. It was followed by further questions and answers, printed in the same issue. Extracts subsequently appeared as an article (not submitted to Jung before publication) in the *Flying Saucer Review* (London), May–June 1955. which was reprinted by the Aerial Phenomena Research Organization in the *APRO Bulletin* (Alamogordo, New Mexico), July 1958. The extracted version of the *Weltwoche* letters resulted in misunderstandings which were given much publicity, and on 13 August Jung released a statement to the United Press International (UPI) and to the National Investigations Committee on Aerial Phenomena (NICAP), of which an English version was published in the Sept. issue of the *APRO Bulletin*. A further statement, in the form of a letter to the director of NICAP, Major Donald E. Keyhoe (infra. pars. 1447f.), was published by NICAP in the *UFO Investigator*, 1:5 (Aug.–Sept. 1958). All these documents were republished in *CSI of New York*, Publication No. 27 (July 1959).]

[2] George Adamski's book (with Desmond Leslie), *Flying Saucers Have Landed*, appeared in 1953 (London). In it he tells the story of how he met a saucer-man in the California desert.

[3] [*The War of the Worlds*, adapted by Orson Welles (1938) from H. G. Wells's novel. It is about Martians invading the United States.]

[4] The report by Major Donald E. Keyhoe concerning his struggle with the Pentagon for recognition of the interplanetary origin of the Ufos was published in 1953 under the title *Flying Saucers from Outer Space.*

[5] [See above, n. 1. This text is translated from the *Badener Tageblatt*, 29 Aug. 1958, and differs in some respects from the translation in the *APRO Bulletin.*]

[6] [Trans. by R.F.C. Hull as *Flying Saucers: A Modern Myth of Things Seen in the Skies* (New York and London, 1959) : in C.W., vol. 10.]

[7] [Original in English. See above, n. 1.]

[1] [Written in English as an invited comment on an article, “Analysis and Faith,” by William H. Roberts, which together with comments by Jung and others—including Gregory Zilboorg, Erich Fromm, and Karl Menninger—was published in *The New Republic* (Washington), 132:20 (16 May 1955). The article was subtitled: “How close are religion and psychiatry in their approaches to sin and salvation?” Roberts was professor of philosophy and religion at Philander Smith College, a Black college in Little Rock, Arkansas.]

[1] [Contributions to symposia: (I) “Das geistige Europa und die ungarische Revolution,” *Die Kultur* (Munich), Jhg. 5, no. 73 (1 Dec. 1956); (II) *Aufstand der Freiheit: Dokumente zur Erhebung des ungarischen Volkes* (Zurich, 1957).]

[1] [Letter of 27 June 1958, answering questions from the editors of the *Zürcher Student* (see above, par. 1403, n. 1) and published in the July 1958 issue, Jhg. 36.]

[1] [Contribution, written in English, to a symposium published in *Cosmopolitan* (New York), CXLV:6 (Dec. 1958), and consisting of “ten highly individual opinions from noted thinkers who have devoted their lives to problems of the spirit.” These also included Norman Vincent Peale, Aldous Huxley, Pitirim A. Sorokin, and Billy Graham.]

[1] [The book (Dorchester, 1961) had the subtitle “A Personal Memoir by His Friends and Family.” The foreword, written in English, is published here with minor stylistic changes.]

[1] [(Translated by H. N.) Written as part of a letter to H. Irminger of Zurich, 22 Sept. 1944, but not sent; instead, Jung retained it in his literary papers. For the letter to Irminger, see *Jung: Letters*, ed. G. Adler, vol. 1.]

[1] [Written July 1945, at the request of Encyclios-Verlag, Zurich, publishers of the *Schweizer Lexikon*. The first sentence and the references at the end of the article were published (without attribution) as the definition of “Dämonie” in the *Lexikon* (1949), vol. I.]

[9] [“until the coming of Helyas Artista, in whose time all that is hidden will be revealed”]

[10] [Following this letter. Bruno quoted another letter from Jung of 22 Dec. 1954 (misdated by Bruno 1953; here trans. by J.A.P.) :

“So far as concerns the Helias of the alchemists, let me remind you of the text by Gerardus Dorneus [quoted as above]. Instead of saying ‘usque ad adventum Christi,’ the alchemist prefers an earlier form of the anthropos, Elijah, who is one of the four persons raised to heaven with their bodies: Enoch, Elijah, Christ, and Mary.

“The reason why the alchemist preferred Elijah, a figure or condition prior to Christ, is probably because in Paracelsus Elijah, like Enoch, belongs among the ‘Enochdiani and Heliezati,’ that is, among those whose bodies are capable of longevity (up to a thousand years) or else incorruptible, like the bodies of Enoch and Elijah. The prolongation of life was a very special interest of the master’s, whereas the premature death of Christ did not seem interesting to him. (Certainly Paracelsus verged on the scientific materialism of the eighteenth century! Cf. *Theophrasti Paracelsi Tract. De Vita Longa*, edit. by Adam v. Bodenstein, 1562.)

“Jewish tradition says that Elijah remained in the corporeal state so as to be visible to mortal eyes during his peregrinations on earth. After reading a little book I had just written (which had to do among other things with the archetypal nature of Yahweh as revealed in the Book of Job), an intellectual and agnostic (or materialistic) Jew had a dream which was sent to me. In his dream he was back in a concentration camp (where he had actually been during the war). Suddenly he perceived an extraordinarily large eagle circling over the camp. He felt spied upon and watched by the menacing bird and, in a highly emotional state, wanted to defend himself by attacking it. To this end, he was looking for a combat plane with which to bring the animal down.

“Thanks to my book, he had realized that in reality it is possible to abolish the idea of a god by means of reason, yet not possible to free oneself from it when one is dealing with an archetype innate in the structure of the psyche itself. (This dream is discussed in “The Philosophical Tree” [C.W. 13], pars. 466ff.) Elijah in the shape of an eagle represents the eye of Yahweh which sees all—‘oculi Dei qui discurrent in universam terram’ (Zach. 4:10). The fear of God had seized him. Thus the theriomorphic attribute of the ancient prophet still plays its part in our time.”]

[11] [Cf. *Aion*. pars, 137ff.]

[1] [Extracts from H. L. Philp, *Jung and the Problem of Evil* (London, 1958). The book consists of correspondence between the author and Jung in the form of questions and answers (in English), and an extended critical attack of 175 pages on Jung's writings on religion, with particular reference to *Answer to Job*. It concludes with Jung's answers to questions sent by another correspondent, the Rev. David Cox (author of *Jung and St. Paul*, 1959). In both cases the answers are reproduced here with minor stylistic revisions and additional footnotes. The bibliographical references to Jung's works have been brought up to date. For other letters from Jung to Philp, see *Letters*, ed. G. Adler, vol. 2.]

[2] [Philp, pp. 8–21. (9 Nov. 1956.)]

[3] [In his question, Philp quoted the following passage from Fromm, *Psychoanalysis and Religion*, pp. 23f.: "Before I present Jung's analysis of religion a critical examination of these methodological premises seems warranted. Jung's use of the concept of truth is not tenable. He states that 'truth is a fact and not a judgment,' that 'an elephant is true because it exists.' But he forgets that truth always and necessarily refers to a judgment and not to a description of a phenomenon which we perceive with our senses and which we denote with a word symbol. Jung then states that an idea is 'psychologically true inasmuch as it exists.' But an idea 'exists' regardless of whether it is a delusion or whether it corresponds to fact. The existence of an idea does not make it 'true' in any sense. Even the practising psychiatrist could not work were he not concerned with the truth of an idea, that is, with its relation to the phenomena it tends to portray. Otherwise, he could not speak of a delusion or a paranoid system. But Jung's approach is not only untenable from a psychiatric standpoint; he advocates a standpoint of relativism which though on the surface more friendly to religion than Freud's, is in its spirit fundamentally opposed to religions like Judaism, Christianity, and Buddhism. These consider the striving for truth as one of man's cardinal virtues and obligations and insist that their doctrines whether arrived at by revelation or only by the power of reason are subject to the criterion of truth."]

This trans. is reproduced here in revised form. It was previously published in *Spring*, 1969.]

[1] [Translated from a German MS by Victor Grove for the English trans. of Julius Spier, *The Hands of Children: An Introduction to Psycho-chirology* (London, 1944); 2nd edn., 1955, with an appendix, “The Hands of the Mentally Diseased,” by Herta Levi. The trans. has been revised.]

[2] [Rodolphus Goclenius, *Uranoscopiae, chiroscopiae, metoposcopiae et opthalmoscopiae contemplatio* (Frankfurt, 1608).

[1] [Tel-Aviv. 1958. Trans. here from the original German MS.]

[2] [“Psychic Conflicts in a Child,” “Analytical Psychology and Education,” and “The Gifted Child” (C.W., vol. 17), the contents of *Psychologie und Erziehung* (1946).]

[1] [(Translated by L. R.) Leipzig and Vienna: Deuticke, 1914. The volume contained papers by Josef Lang, J. Vodoz, Hans Schmid, and C. Schneiter. The series was not used again until 1928, when Jung published *Über die Energetik der Seele* as vol. II (Zurich: Rascher, henceforward). This and the succeeding volumes were devoted to Jung's writings, sometimes with contributions by colleagues: III (1931), *Seelenprobleme der Gegenwart*, with a contribution by W. M. Kranefeldt; IV (1934), *Wirklichkeit der Seele*, with contributions by Hugo Rosenthal, Emma Jung, and W. M. Kranefeldt; V (1944), *Psychologie und Alchemie;* VI (1948), *Symbolik des Geistes*, with a contribution by R. Schärf; VII (1950), *Gestaltungen des Unbewussten*, with a contribution by Aniela Jaffé; VIII (1951), *Aion*, with a contribution by M.-L. von Franz; IX (1954), *Von den Wurzeln des Bewusstseins*; X–XII (1955–56), *Mysterium Coniunctionis*, with a contribution by M.-L. von Franz (= an edition of *Aurora Consurgens*, constituting vol. XII).]

[1] [(Translation revised and augmented by L. R.) The text of this address given above, pars. 1514–1517 (q.v.), was obtained by the Editors from the Jung archives at Küsnacht in the early 1960's and was assigned to R.F.C. Hull for translation on the assumption that it represented the text that Jung read at the convocation in Zurich, 15 Nov. 1953. In 1975, when the present vol. was in page proof, a considerably augmented version was published (in German) by Professor Gilles Quispel as an appendix to the volume *C. G. Jung: een mens voor deze tijd* (Rotterdam), consisting of essays (in Dutch) on Jung's work by Quispel ("Jung and Gnosis"), C. Aalders, and J. H. Plokker. Quispel had obtained this text of the Address some years earlier from one of the persons who had arranged the convocation. Subsequently, Professor C. A. Meier provided an even fuller version of Jung's actual remarks, and that is translated here (the added material being indicated by a vertical line in the left margin). Jung had first written the shorter version, then had expanded it prior to the occasion, but the shorter version had been circulated.

George H. Page, of Switzerland, donated funds that enabled the Jung Institute to purchase the Codex from the estate of Albert Eid, a Belgian dealer in antiquities who had acquired it in Egypt. Professor Meier, then director of the Institute, had played the leading role in tracing and negotiating for the Codex. In accordance with the original agreement, the Codex was eventually given to the Coptic Museum in Cairo.]

BOLLINGEN SERIES XX

PRINCETON UNIVERSITY PRESS

THIS EDITION IS BEING PUBLISHED IN THE UNITED STATES OF AMERICA FOR BOLLINGEN FOUNDATION BY PRINCETON UNIVERSITY PRESS AND IN ENGLAND BY ROUTLEDGE & KEGAN PAUL, LTD. IN THE AMERICAN EDITION, ALL THE VOLUMES COMPRISING THE COLLECTED WORKS CONSTITUTE NUMBER XX IN BOLLINGEN SERIES. THE PRESENT VOLUME IS NUMBER 19 OF THE COLLECTED WORKS AND IS THE LAST TO BE PUBLISHED.

LIBRARY OF CONGRESS CATALOGUE CARD NUMBER: 75-156
ISBN 0-691-09893-X
MANUFACTURED IN THE U.S.A.

EDITORIAL NOTE

In the compilation of the following list of published writings, it has been the intention to record (through 1975) the initial publication of each original work of C. G. Jung, each translation, and subsequent substantial revisions and/or expansions thereof, with reciprocal cross-references. The items are ordered chronologically by years of publication, and within the year to the best of our knowledge (books first); items that cannot be dated closely enough appear at the end of the year's listings. Unless otherwise indicated (by an initial asterisk), each publication in German, English, and French has been examined by the compilers and described accordingly. This principle could not, practically, be observed for works in other languages, though these have been examined insofar as possible. Translations are related by cross-references to the work from which the translation was made, though it has not been possible to ascertain this in every case.

Unrevised reprintings of a text are not recorded unless brought out by a different publisher or altered in format, as in the case of a paperback edition. In such instances, the reissue is noted under the original entry. Separately reprinted brief extracts have generally been omitted as well. The proliferation of reprints, particularly in paperback, and of extract and anthologized use of Jung's writings both in brief and in extenso has made a policy of inclusiveness unrealistic.

In addition to all books and articles written by Jung solely or in collaboration with others, it has been the intention to record all forewords and the like written for other authors' works, letters included in other writers' publications, book reviews, newspaper articles both popular and scholarly, published texts of lectures appearing either in full or as summarized by their author ("Autoreferat"), and announcements issued in his capacity as editor.

In order to give as nearly complete a record as possible of Jung's publication, as well as to throw light on the sequence of development of his ideas, we have included, duly distinguished and with the permission of the responsible organizations, those items issued initially for private circulation. For the same reasons, we have included whatever information became available to us in regard to the delivery of a publication on some occasion in lecture form, and other useful secondary information. A separate list records chronologically the volumes of Seminar Notes, for the most part issued privately and under restriction. The numerous interviews with Jung—either published in periodicals and books or recorded for radio, television, or film, or by tape—have not been listed. Those of most interest and value are published in a volume, outside the *Collected Works, entitled C. G. Jung Speaking: Interviews and Encounters*.

The *Collected Works* (in English) and the *Gesammelte Werke* (in German) are separately listed, in volume sequence, with the necessary reciprocal cross-references. (Lists of contents of volumes 2 and 13 in the *Gesammelte Werke*, though still in press, were added in proof but could not be included in the indexes.)

While we have aimed at citing every substantial publication of Jung's writings, we are aware that in the case of items appearing in newspapers, books by other authors, etc., and particularly in the case of translations, omissions undoubtedly have occurred. We shall be grateful to be informed of these—and of any omissions and errors whatever—looking toward a revised edition of the General Bibliography.

*

This bibliography of Jung's writings was originally compiled, as a working tool for the English collection edition at the outset, by Michael Fordham, who based it on a list published by Jolande Jacobi in her *The Psychology of C. G. Jung;* he was indebted also, for advice, to Professor Jung's secretary at that time, Marie-Jeanne Schmid. This "draft bibliography," more or less in the form of the present publication, underwent revision and augmentation by the Editors and staff in a printed version that was privately distributed to workers in the field. The project of compiling a definitive General Bibliography was undertaken by A.S.B. Glover. After his death, in 1966, the work was carried on, under William McGuire's supervision, first by Jasna P. Heurtley and then by Lisa Ress, who is responsible for the present comprehensive state of the Bibliography.

The editors and publishers of the *Gesammelte Werke*, in Switzerland, have been of assistance throughout. Others to whom the compilers are especially indebted are Doris Albrecht, Roland Cahen, Aldo Carotenuto, G. Dreifuss, Aniela Jaffé, and Mihoko Okamura. The resources of two collections have been of particular value: the library of Professor C. G. Jung, at his house in Küsnacht/Zürich, subsequently in the care of Mr. and Mrs. Franz Jung, and the Kristine Mann Library of the Analytical Psychology Club of New York.

*

ABBREVIATIONS AND SYMBOLS. The bibliographical abbreviations will, it is assumed, be obvious to users of the Bibliography. Abbreviations of titles of periodicals are explained in the index of periodicals. CW = *Collected Works;* GW = *Gesammelte Werke* (both listed by volumes in Part II). BS = Bollingen Series. An asterisk preceding an entry in the German, English, and French sections indicates that the publication could not be examined.

THE PUBLISHED WRITINGS OF C. G. JUNG

Original Works and Translations

GERMAN

1902a *Zur Psychologie und Pathologie sogenannter occulter Phänomene. Eine psychiatrische Studie*. Leipzig: Oswald Mutze. pp. 121. Repub. as GW 1,1. Inaugural dissertation for the doctoral degree, presented to the Universität Zürich, Medizinische Fakultät. TR.—English: 1916a,2/CW 1,1//French: 1939a,2/1956a,4//Russian: 1939a.

1902b "Ein Fall von hysterischem Stupor bei einer Untersuchungsgefangenen." *J. Psychol. Neurol*., I:3, 110–22. Repub. as GW 1,5. TR.—English: CW 1,5.

1903a "Über manische Verstimmung." *Allgemeine Zeitschrift für Psychiatrie und psychisch-gerichtliche Medizin*, LXI:1, 15–39. Repub. as GW 1,4. TR.—English: CW 1,4.

1903b "Über Simulation von Geistesstörung." *J. Psychol. Neurol*., II:5, 181–201. Repub. as GW 1,6. TR.—English: CW 1,6.

1904a With F. Riklin: "Experimentelle Untersuchungen über Assoziationen Gesunder." (Diagnostische Assoziationsstudien, I. Beitrag.) *J. Psychol. Neurol*., as follows: Pt. I—III:1/2, 55–83; Pt. II—III:4, 145–64; Pt. III—III:5, 193–215; Pt. IV—111:6, 283–308; Pt. V—IV: 1/2, 24–67. Combined and pub. as G.1906a, 1 with slight title change.

1904b "Über hysterisches Verlesen: eine Erwiderung an Herrn Hahn (pr. Arzt in Zürich)." *Archiv für die gesamte Psychologie*, III:4 (May), 347–50. Repub. as GW 1,2. TR.—English: CW 1,2.

1904c "Ärztliches Gutachten über einen Fall von Simulation geistiger Störung." *Schweiz. Z. Strafrecht*, XVII, 55–75. Repub. as GW 1,7. TR.—English: CW 1,7.

1905a "Kryptomnesie." *Die Zukunft*, Jhg. 13, L (25 Feb.), 325–34. Repub., slightly rev., as GW 1,3. TR.—English: CW 1,3.

1905b Review of Willy Hellpach: *Grundlinien einer Psychologie der Hysterie. Zbl. Nervenhk*., XXVIII (n.s. XVI) (15 Apr.), 318–21. TR.—English: CW 18,19.

1905c "Experimentelle Beobachtungen über das Erinnerungsvermögen." *Zbl. Nervenhk*., XXVIII (n.s. XVI): 196 (1 Sept.), 653–66. Repub. as GW 2,4. TR.—English: CW 2,4.

1905d "Zur psychologischen Tatbestandsdiagnostik." *Zbl. Nervenhk*., XXVIII (n.s. XVI):200 (1 Nov.), 813–15. Repub. as GW 1,9. TR. —English: CW 1,9.

1905e "Über spiritistische Erscheinungen." *Basl. Nach*., Nos. 311–16 (12–17 Nov.). Extract pub. in *Volksrecht* (22 Nov.). Given as lecture at the Bernoullianum, Basel, 5 Feb. 1905. TR.—English: CW 18,4.

1905f "Die psychologische Diagnose des Tatbestandes." *Schweiz, Z. Strafrecht*, XVIII, 369–408. Repub. as G. 1906k with last (minor) sentence omitted.

1905g "Analyse der Assoziationen eines Epileptikers." (Diagnostische Assoziationsstudien, III. Beitrag.) *J. Psychol. Neurol*., V:2, 73–90. Repub. as G. 1906a,2.

1905h "Über das Verhalten der Reaktionszeit beim Assoziationsexperimente." (Diagnostische Assoziationsstudien, IV. Beitrag.) *J. Psychol. Neurol*., VI: 1/2, 1–36. Also issued as pamphlet, Leipzig: Barth. pp. 38. Jung's "Habilitationsschrift," Universität Zürich, Medizinische Fakultät. Repub. as G. 1906a,3.

1906a *Diagnostische Assoziationsstudien: Beiträge zur experimentellen Psychopathologie*. Ed. by C. G. Jung. Vol. I. Leipzig: Barth. pp. 281. Subsequently issued bound as one with G. 1909a. Contains the following works wholly or partly by Jung:

1. With F. Riklin: "Experimentelle Untersuchungen über Assoziationen Gesunder." (7–145) G. 1904a repub. with slight title change. Repub. as GW 2,1. TR—English: 1918a,1/CW 2,1.

2. “Analyse der Assoziationen eines Epileptikers.” (175–92) G. 1905g repub. Repub. as GW 2,2. TR.—English: 1918a,2/CW 2.2.
3. “Über das Verhalten der Reaktionszeit beim Assoziationsexperimente.” (193–228) G. 1905h repub. Repub. as GW 2,3. TR.—English: 1918a,3/CW 2,3.
4. “Psychoanalyse und Assoziationsexperiment.” (258–81) G. 1906i repub. Repub. as GW 2,5. TR.—English: 1918a,4/CW 2,5.

Contents also summarized in French by Jung. Cf. Fr. 1908a.

1906b “Die psychopathologische Bedeutung des Assoziationsexperimentes.” *Archiv für Kriminalanthropologie und Kriminalistik*, XXII:2–3 (15 Feb.), 145–62. Given as inaugural lecture upon Jung’s appointment as Lecturer in Psychiatry, Universität Zürich, 21 Oct. 1905. Repub. as GW 2,8. TR.—English: CW 2,8.

1906c “Statistisches von der Rekrutenaushebung.” *CorrespBl. schweizer Ärzte*, XXXVI:4 (15 Feb.), 129–30. Repub. as GW 2,15. TR.—English: CW 2,15.

1906d “Obergutachten über zwei sich widersprechende psychiatrische Gutachten.” *Monatsschrift für Kriminalpsychologie und Strafrechtsreform*, II:11/12 (Feb.-Mar.), 691–98. Repub. as GW 1,8 with minor title change. TR.—English: CW 1,8.

1906e Review of L. Bruns: *Die Hysterie im Kindesalter. CorrespBl. schweizer Ärzte*, XXXVI:19 (1 Oct.), 634–35. TR.—English: CW 18,20.

1906f Review of E. Bleuler: *Affektivität, Suggestibilität, Paranoia. CorrespBl. schweizer Ärzte*, XXXVI:21 (1 Nov.), 694–95. TR.—English: CW 18,20.

1906g “Die Hysterielehre Freuds. Eine Erwiderung auf die Aschaffenburgsche Kritik.” *Münchener medizinische Wochenschrift*, LIII:47 (20 Nov.), 2301–02. Repub. as GW 4,1. TR.—English: CW 4,1.

1906h Review of Carl Wernicke: *Grundriss der Psychiatrie in klinischen Vorlesungen. CorrespBl. schweizer Ärzte*, XXXVI:23 (1 Dec), 790–91. TR.—English: CW 18,20.

1906i “Psychoanalyse und Assoziationsexperiment.” (Diagnostische Assoziationsstudien, VI. Beitrag.) *J. Psychol. Neurol.*, VII: 1/2, 1–24. Also pub. in *Schweiz. Z. Strafrecht*, XVIII, 396–403. Repub. as G. 1906a,4. TR.—English: 1918a,4.

1906j “Assoziation, Traum und hysterisches Symptom.” *J. Psychol. Neurol.*, VIII: 1/2, 25–60. Repub. as G. 1909a,1.

1906k “Die psychologische Diagnose des Tatbestandes.” *Juristisch-psychiatrische Grenzfragen*, IV:2, 3–47. Also pub. as pamphlet (bound with article by another author). Halle: Carl Marhold. At head of title: “Aus der psychiatrischen Universitätsklinik in Zürich.” G. 1905f repub. with omission of last (minor) sentence. Repub. as monograph: G. 1941d; and as GW 2,6. TR.—English: CW 2,6.

1907a *Über die Psychologie der Dementia praecox: Ein Versuch*. Halle a. S.: Carl Marhold. pp. 179. 1972: (Frühe Schriften II; “Studienausgabe.”) Olten: Walter. pp. 180.

Vorwort. (Dated July 1906.)

I. Kritische Darstellung theoretischer Ansichten über die Psychologie der Dementia praecox.

II. Der gefühlsbetonte Komplex und seine allgemeinen Wirkungen auf die Psyche.

III. Der Einfluss des gefühlsbetonten Komplexes auf die Association.

IV. Dementia praecox und Hysterie. Eine Parallele.

V. Analyse eines Falles von paranoider Demenz, als Paradigma. Schlusswort.

Repub. as GW 3,1. TR.—English: 1909a/CW 3,1//Russian: 1939a.

1907b Review of Albert Moll: *Der Hypnotismus, mit Einschluss der Hauptpunkte der Psychotherapie und des Occultismus. CorrespBl. schweizer Ärzte*, XXXVII:11 (1 June), 354–55. TR.—English: CW 18,20.

1907c Review of Albert Knapp: *Die polyneuritischen Psychosen. CorrespBl. schweizer Ärzte*, XXXVII: 11 (1 June), 355. TR.—English: CW 18,20.

15. “New Paths in Psychology.” (352–77) Trans. from G. 1912d by Dora Hecht. Pub., rev. and exp., with title change, as E. 1917a,15. Pub. in a dif. trans. as CW 7,3.

TR.—Japanese: (7 articles only) 1926a.

1916b *Psychology of the Unconscious. A Study of the Transformation and Symbolisms of the Libido. A Contribution to the History of the Evolution of Thought*. New York: Moffat, Yard; London: Kegan Paul, Trench, Trubner. pp. Ivi + 566. (Lengthy front matter contains intro. by the translator.) Trans. from G. 1912a by Beatrice M. Hinkle. The American edn. was imported, presumably as sheets, into Great Britain by Kegan Paul, who substituted their title page. Publication date for the London edn. is considered to be 1917, although copies bear only the 1916 copyright date by Moffat Yard. In 1919, Moffat Yard issued a “new edn.,” xxxvi + 339 pp. Kegan Paul reprinted this last version in 1921, continuing to do so through the 6th impression, 1951. (In 1947, the imprint became Routledge & Kegan Paul.) Dodd Mead (New York) acquired the book from Moffat Yard in 1925, reprinting the 1916 edn. which was in print until 1972. Contents (the first pagination given is that of the 1916 edn., the second, that of the 1919 edn.):

1. Author’s Note. (xlvii) (xxix) Cf. CW 5, 2d edn., 2d pr.

Part I.

2. Introduction. (3–7) (1–3)
3. Concerning the Two Kinds of Thinking. (8–41) (4–21)
4. The Miller Phantasies. (42–48) (22–25)
5. The Hymn of Creation. (49–86) (26–46)
6. The Song of the Moth. (87–126) (47–69)

Part II.

7. Aspects of the Libido. (127–38) (70–76)
8. The Conception and the Genetic Theory of Libido. (139–56) (77–86)
9. The Transformation of the Libido. A Possible Source of Primitive Human Discoveries. (157–90) (87–105)

10. The Unconscious Origin of the Hero. (191–232) (106–28)
11. Symbolism of the Mother and of Rebirth. (233–306) (129–168)
12. The Battle for Deliverance from the Mother. (307–40) (169–87)
13. The Dual Mother Role. (341–427) (188–236)
14. The Sacrifice. (428–83) (237–67)

Entire work pub., rev. and expanded, in a dif. trans. with change of title, as CW 5. TR.—Japanese: 1931b.

1917a *Collected Papers on Analytical Psychology*. Ed. by Constance E. Long. 2d edn. New York: Moffat, Yard; London: Bailliére, Tindall & Cox. pp. 492. Contents conform to those of the 1st edn. (cf. E. 1916a) with the following addns. and substitution:

1a. Author's Preface to the Second Edition. (ix-xii) Probably trans. from the German ms. by Constance E. Long. Dated June 1917. Repub. in a dif. trans. as CW 4,13,b.

15. "The Psychology of the Unconscious Processes." (352–444) Trans. from G. 1917a by Dora Hecht. Replaces E. 1916a,15, of which this is a rev. and exp. version. Cf. E. 1928b,1 and CW 7,1 for trans.'s of further rev. versions.

16. "The Conception of the Unconscious." (445–74) Trans. from a German ms. subsequently lost, a French trans. of which was pub. as Fr. 1916a. The orig. ms. was found posthumously and a dif. trans. pub. as CW 7,4 (2d edn.). Cf. E. 1928,2 and CW 7,2 for trans. of further rev. versions. Delivered as a lecture to the Zurich School of Analytical Psychology, 1916.

1918a *Studies in Word-Association. Experiments in the Diagnosis of Psychopathological Conditions Carried Out at the Psychiatric Clinic of the University of Zurich, under the direction of C. G. Jung*. New York: Moffat, Yard; London: Heinemann, 1919. pp. 575. 1969: New York: Russell &: Russell; London: Routledge &

Kegan Paul. Trans. by M. D. Eder. Contains the following works by Jung:

1. With F. Riklin: “The Associations of Normal Subjects.” (8–172) Trans. from G. 1906a,1. Pub. in a dif. trans. as CW 2,1.
2. “Analysis of the Associations of an Epileptic.” (206–26) Trans. from G. 1906a,2. Pub. in a dif. trans. as CW 2,2.
3. “Reaction-Time in Association Experiments.” (227–65) Trans. from G. 1906a,3. Pub. in a dif. trans. as CW 2,3.
4. “Psycho-Analysis and Association Experiments.” (297–321) Trans. from G. 1906a,4. Pub. in a dif. trans. with slight title change as CW 2,5.
5. “Association, Dream, and Hysterical Symptoms.” (354–95) Trans. from G. 1909a,1. Pub. in a dif. trans. with slight title change as CW 2,7.
6. “On Disturbances in Reproduction in Association Experiments.” (396–406) Trans. from G. 1909a,2. Pub, in a dif. trans. with slight title change as CW 2,9.

1965a *Psikoloji ve din*. Istanbul: Olus Yayinevi. pp. 128. Trans. from E. 1938a by Ender Gürol.

II

THE COLLECTED WORKS OF C. G. JUNG
DIE GESAMMELTEN WERKE VON C. G.JUNG

The contents of the two editions are coordinated on facing pages. Paragraph numbers (column at right) are given only for the *Collected Works;* they are the same for the *Gesammelte Werke* except for discrepancies in volumes 6, 8, 11, and 14, which are explained in each volume. Page numbers are given in () following each title. The cross-references indicate, in general, the immediate derivation of each work, with further references as may be useful. Republications (chiefly paperback reprints) derived *from* the texts in the collected volumes are also indicated.

The Collected Works of C. G. Jung. Edited by † Herbert Read, Michael Fordham, and Gerhard Adler; executive editor (from 1967), William McGuire. Translated by † R.F.C. Hull, except as otherwise noted. New York: Pantheon Books for Bollingen Foundation, 1953–1960; Bollingen Foundation (distributed by Pantheon Books, a Division of Random House), 1961–1967. Princeton, New Jersey: Princeton University Press, 1967–1978. (Bollingen Series XX.) London: Routledge & Kegan Paul, 1953–1978. (The New York/Princeton and London edns. are identical except for title-pages and binding. Reprintings vary.)

1975d *La libido. Simboli e trasformazioni*. Rome: Newton Compton. pp. 389. Trans. from G. 1912a by Girolamo Mancuso. Cf. It. 1965b and 1970a.

THE COLLECTED WORKS OF

C. G. JUNG

THE PUBLICATION of the first complete edition, in English, of the works of C. G. Jung was undertaken by Routledge and Kegan Paul, Ltd., in England and by Bollingen Foundation in the United States. The American edition is number XX in Bollingen Series, which since 1967 has been published by Princeton University Press. The edition contains revised versions of works previously published, such as *Psychology of the Unconscious*, which is now entitled *Symbols of Transformation;* works originally written in English, such as *Psychology and Religion;* works not previously translated, such as *Aion;* and, in general, new translations of virtually all of Professor Jung's writings. Prior to his death, in 1961, the author supervised the textual revision, which in some cases is extensive. Sir Herbert Read (d. 1968), Dr. Michael Fordham, and Dr. Gerhard Adler compose the Editorial Committee; the translator is R. F. C. Hull (except for Volume 2) and William McGuire is executive editor.

The price of the volumes varies according to size; they are sold separately, and may also be obtained on standing order. Several of the volumes are extensively illustrated. Each volume contains an index and in most a bibliography; the final volumes will contain a complete bibliography of Professor Jung's writings and a general index to the entire edition.

In the following list, dates of original publication are given in parentheses (of original composition, in brackets). Multiple dates indicate revisions.

*1. PSYCHIATRIC STUDIES

On the Psychology and Pathology of So-Called Occult Phenomena (1902)
On Hysterical Misreading (1904)
Cryptomnesia (1905)

On Manic Mood Disorder (1903)
A Case of Hysterical Stupor in a Prisoner in Detention (1902)
On Simulated Insanity (1903)
A Medical Opinion on a Case of Simulated Insanity (1904)
A Third and Final Opinion on Two Contradictory Psychiatric Diagnoses (1906)
On the Psychological Diagnosis of Facts (1905)

†2. EXPERIMENTAL RESEARCHES

Translated by Leopold Stein in collaboration with Diana Riviere

STUDIES IN WORD ASSOCIATION (1904–7, 1910)

The Associations of Normal Subjects (by Jung and F. Riklin)
An Analysis of the Associations of an Epileptic
The Reaction-Time Ratio in the Association Experiment
Experimental Observations on the Faculty of Memory
Psychoanalysis and Association Experiments
The Psychological Diagnosis of Evidence
Association, Dream, and Hysterical Symptom
The Psychopathological Significance of the Association Experiment
Disturbances in Reproduction in the Association Experiment
The Association Method
The Family Constellation

PSYCHOPHYSICAL RESEARCHES (1907–8)

On the Psychophysical Relations of the Association Experiment
Psychophysical Investigations with the Galvanometer and Pneumograph in Normal and Insane Individuals (by F. Peterson and Jung)
Further Investigations on the Galvanic Phenomenon and Respiration in Normal and Insane Individuals (by C. Ricksher and Jung)
Appendix: Statistical Details of Enlistment (1906); New Aspects of Criminal Psychology (1908); The Psychological Methods of

Investigation Used in the Psychiatric Clinic of the University of Zurich (1910); On the Doctrine of Complexes ([1911] 1913); On the Psychological Diagnosis of Evidence (1937)

*3. THE PSYCHOGENESIS OF MENTAL DISEASE

The Psychology of Dementia Praecox (1907)
The Content of the Psychoses (1908/1914)
On Psychological Understanding (1914)
A Criticism of Bleuler's Theory of Schizophrenic Negativism (1911)
On the Importance of the Unconscious in Psychopathology (1914)
On the Problem of Psychogenesis in Mental Disease (1919)
Mental Disease and the Psyche (1928)
On the Psychogenesis of Schizophrenia (1939)
Recent Thoughts on Schizophrenia (1957)
Schizophrenia (1958)

†4. FREUD AND PSYCHOANALYSIS

Freud's Theory of Hysteria: A Reply to Aschaffenburg (1906)
The Freudian Theory of Hysteria (1908)
The Analysis of Dreams (1909)
A Contribution to the Psychology of Rumour (1910–11)
On the Significance of Number Dreams (1910–11)
Morton Prince, "The Mechanism and Interpretation of Dreams": A Critical Review (1911)
On the Criticism of Psychoanalysis (1910)
Concerning Psychoanalysis (1912)
The Theory of Psychoanalysis (1913)
General Aspects of Psychoanalysis (1913)
Psychoanalysis and Neurosis (1916)
Some Crucial Points in Psychoanalysis: A Correspondence between Dr. Jung and Dr. Loÿ (1914)
Prefaces to "Collected Papers on Analytical Psychology" (1916, 1917)

The Significance of the Father in the Destiny of the Individual (1909/1949)
Introduction to Kranefeldt's "Secret Ways of the Mind" (1930)
Freud and Jung: Contrasts (1929)

‡5. SYMBOLS OF TRANSFORMATION (1911–12/1952)

PART 1

Introduction
Two Kinds of Thinking
The Miller Fantasies: Anamnesis
The Hymn of Creation
The Song of the Moth

PART II

Introduction
The Concept of Libido
The Transformation of Libido
The Origin of the Hero
Symbols of the Mother and of Rebirth
The Battle for Deliverance from the Mother
The Dual Mother
The Sacrifice
Epilogue
Appendix: The Miller Fantasies

*6. PSYCHOLOGICAL TYPES (1921)

Introduction
The Problem of Types in the History of Classical and Medieval Thought
Schiller's Ideas on the Type Problem
The Apollinian and the Dionysian
The Type Problem in Human Character
The Type Problem in Poetry
The Type Problem in Psychopathology

The Type Problem in Aesthetics
The Type Problem in Modern Philosophy
The Type Problem in Biography
General Description of the Types
Definitions
Epilogue
Four Papers on Psychological Typology (1913, 1925, 1931, 1936)

†7. TWO ESSAYS ON ANALYTICAL PSYCHOLOGY
On the Psychology of the Unconscious (1917/1926/1943)
The Relations between the Ego and the Unconscious (1928)
Appendix: New Paths in Psychology (1912); The Structure of the Unconscious (1916) (new versions, with variants, 1966)

‡8. THE STRUCTURE AND DYNAMICS OF THE PSYCHE
On Psychic Energy (1928)
The Transcendent Function ([1916]/1957)
A Review of the Complex Theory (1934)
The Significance of Constitution and Heredity in Psychology (1929)
Psychological Factors Determining Human Behavior (1937)
Instinct and the Unconscious (1919)
The Structure of the Psyche (1927/1931)
On the Nature of the Psyche (1947/1954)
General Aspects of Dream Psychology (1916/1948)
On the Nature of Dreams (1945/1948)
The Psychological Foundations of Belief in Spirits (1920/1948)
Spirit and Life (1926)
Basic Postulates of Analytical Psychology (1931)
Analytical Psychology and *Weltanschauung* (1928/1931)
The Real and the Surreal (1933)
The Stages of Life (1930–1931)
The Soul and Death (1934)
Synchronicity: An Acausal Connecting Principle (1952)

Appendix: On Synchronicity (1951)

*9. PART I. THE ARCHETYPES AND THE COLLECTIVE UNCONSCIOUS

Archetypes of the Collective Unconscious (1934/1954)
The Concept of the Collective Unconscious (1936)
Concerning the Archetypes, with Special Reference to the Anima Concept (1936/1954)
Psychological Aspects of the Mother Archetype (1938/1954)
Concerning Rebirth (1940/1950)
The Psychology of the Child Archetype (1940)
The Psychological Aspects of the Kore (1941)
The Phenomenology of the Spirit in Fairytales (1945/1948)
On the Psychology of the Trickster-Figure (1954)
Conscious, Unconscious, and Individuation (1939)
A Study in the Process of Individuation (1934/1950)
Concerning Mandala Symbolism (1950)
Appendix: Mandalas (1955)

*9. PART II. AION (1951)

RESEARCHES INTO THE PHENOMENOLOGY OF THE SELF

The Ego
The Shadow
The Syzygy: Anima and Animus
The Self
Christ, a Symbol of the Self
The Sign of the Fishes
The Prophecies of Nostradamus
The Historical Significance of the Fish
The Ambivalence of the Fish Symbol
The Fish in Alchemy
The Alchemical Interpretation of the Fish
Background to the Psychology of Christian Alchemical Symbolism

Gnostic Symbols of the Self
The Structure and Dynamics of the Self
Conclusion

*10. CIVILIZATION IN TRANSITION

The Role of the Unconscious (1918)
Mind and Earth (1927/1931)
Archaic Man (1931)
The Spiritual Problem of Modern Man (1928/1931)
The Love Problem of a Student (1928)
Woman in Europe (1927)
The Meaning of Psychology for Modern Man (1933/1934)
The State of Psychotherapy Today (1934)
Preface and Epilogue to “Essays on Contemporary Events” (1946)
Wotan (1936)
After the Catastrophe (1945)
The Fight with the Shadow (1946)
The Undiscovered Self (Present and Future) (1957)
Flying Saucers: A Modern Myth (1958)
A Psychological View of Conscience (1958)
Good and Evil in Analytical Psychology (1959)
Introduction to Wolff’s “Studies in Jungian Psychology” (1959)
The Swiss Line in the European Spectrum (1928)
Reviews of Keyserling’s “America Set Free” (1930) and “La Révolution Mondiale” (1934)
The Complications of American Psychology (1930)
The Dreamlike World of India (1939)
What India Can Teach Us (1939)
Appendix: Documents (1933–1938)

†11. PSYCHOLOGY AND RELIGION: WEST AND EAST

WESTERN RELIGION

Psychology and Religion (The Terry Lectures) (1938/1940)

A Psychological Approach to the Dogma of the Trinity (1942/1948)

Transformation Symbolism in the Mass (1942/1954)

Forewords to White's "God and the Unconscious" and Werblowsky's "Lucifer and Prometheus" (1952)

Brother Klaus (1933)

Psychotherapists or the Clergy (1932)

Psychoanalysis and the Cure of Souls (1928)

Answer to Job (1952)

EASTERN RELIGION

Psychological Commentaries on "The Tibetan Book of the Great Liberation" (1939/1954) and "The Tibetan Book of the Dead" (1935/1953)

Yoga and the West (1936)

Foreword to Suzuki's "Introduction to Zen Buddhism" (1939)

The Psychology of Eastern Meditation (1943)

The Holy Men of India: Introduction to Zimmer's "Der Weg zum Selbst" (1944)

Foreword to the "I Ching" (1950)

*12. PSYCHOLOGY AND ALCHEMY (1944)

Prefatory note to the English Edition ([1951?] added 1967)

Introduction to the Religious and Psychological Problems of Alchemy

Individual Dream Symbolism in Relation to Alchemy (1936)

Religious Ideas in Alchemy (1937)

Epilogue

†13. ALCHEMICAL STUDIES

Commentary on "The Secret of the Golden Flower" (1929)

The Visions of Zosimos (1938/1954)

Paracelsus as a Spiritual Phenomenon (1942)

The Spirit Mercurius (1943/1948)

The Philosophical Tree (1945/1954)

‡14. MYSTERIUM CONIUNCTIONIS (1955–56)

AN INQUIRY INTO THE SEPARATION AND SYNTHESIS OF PSYCHIC OPPOSITES IN ALCHEMY

The Components of the Coniunctio
The Paradoxa
The Personification of the Opposites
Rex and Regina
Adam and Eve
The Conjunction

*15. THE SPIRIT IN MAN, ART, AND LITERATURE

Paracelsus (1929)
Paracelsus the Physician (1941)
Sigmund Freud in His Historical Setting (1932)
In Memory of Sigmund Freud (1939)
Richard Wilhelm: In Memoriam (1930)
On the Relation of Analytical Psychology to Poetry (1922)
Psychology and Literature (1930/1950)
“Ulysses”: A Monologue (1932)
Picasso (1932)

†16. THE PRACTICE OF PSYCHOTHERAPY

GENERAL PROBLEMS OF PSYCHOTHERAPY

Principles of Practical Psychotherapy (1935)
What Is Psychotherapy? (1935)
Some Aspects of Modern Psychotherapy (1930)
The Aims of Psychotherapy (1931)
Problems of Modern Psychotherapy (1929)
Psychotherapy and a Philosophy of Life (1943)
Medicine and Psychotherapy (1945)
Psychotherapy Today (1945)
Fundamental Questions of Psychotherapy (1951)

SPECIFIC PROBLEMS OF PSYCHOTHERAPY

The Therapeutic Value of Abreaction (1921/1928)
The Practical Use of Dream-Analysis (1934)
The Psychology of the Transference (1946)
Appendix: The Realities of Practical Psychotherapy ([1937] added, 1966)

‡17. THE DEVELOPMENT OF PERSONALITY
Psychic Conflicts in a Child (1910/1946)
Introduction to Wickes's “Analyse der Kinderseele” (1927/1931)
Child Development and Education (1928)
